INDEX CUMULATIF DES MATIERES 610

Foreword

This is the twelfth in the series of *Demographic Yearbooks* assembled and published since 1948 by the Statistical Office of the United Nations from official statistics generously made available by national statistical authorities.

This issue features for the first time historical trends of population size and characteristics for over 200 countries and territories. Time series of population-census results for males and females separately have been assembled from enumerations carried out between 1900 and 1961, and intercensal rates of growth for both sexes have been computed. Geographic characteristics of the population for 1920-1961, as shown by urban residence and the proportion of population living in localties of 20 000 and more and 100 000 and more inhabitants, are included, as well as estimates of total population each year. Estimates of population living in the capital city and in each city having 100 000 and more inhabitants during the period 1940 to 1961 are also included. Series of population estimates by demographic characteristics such as age, sex, literacy, marital status, and economic status, for the period of 1920-1961, complete the feature subject.

The basic tables of the *Yearbook* remain unchanged; they include the usual revised and extended statistics of area and density; trends of natality, general mortality, infant mortality, nuptiality, and divorce; distribution of births by age of mother, of deaths by age and sex, of deaths by cause, and of marriages by age of bride and groom; and expectation of life values.

Chapter I, entitled *How Well Do We Know the World's Population?*, deals with methods of evaluating the accuracy of the world population estimate. Chapter II, *Technical Notes to the Statistical Tables,* gives the usual information on geographic coverage of tables and technical information on comparability of the data.

Acknowledgement is made to the Population Branch of the Bureau of Social Affairs, United Nations Department of Economic and Social Affairs, for the classification of population estimates by method of construction, which appears regularly in Table 1, for preparation of adjusted estimates of population for the world, continents and regions, shown in Table 2, and for the text of Chapter I which evaluates the reliability of the world data.

•

• •

The *Demographic Yearbook* should be considered as one of a co-ordinated and interrelated set of periodic publications issued by the United Nations and the specialized agencies, designed to supply basic statistical data for demographers, economists, sociologists and public-health workers.

In particular, the general interest of the United Nations in the broad range of demographic statistics and that of the World Health Organization in those needed for the study of health problems, form the basis of the close co-operation of these agencies in the collection and publication of population, vital and other related types of statistical data. Under the co-ordinated plan, the United Nations *Demographic*

Yearbook is the central international source of demographic statistics. Some of the data assembled for the *Demographic Yearbook* are reprinted in the publications of the World Health Organization—in particular in the *Annual Epidemiological and Vital Statistics*—to make them more readily accessible to the medical and public-health professions. In addition, the World Health Organization publishes annually compilations of deaths by cause, age and sex, detailed statistics on selected causes of death, information on cases and deaths from notifiable diseases and other data of medical interest, which supplement the *Demographic Yearbook* tables.

Considered together, these publications of the United Nations and the World Health Organization cover the major types of demographic and health statistics, and both sets should be used when detailed figures on the full range of internationally assembled statistics on these subjects are required.

Avant-propos

Le présent *Annuaire démographique,* où sont rassemblées des données officielles généreusement communiqées par les services nationaux de statistique, est le douzième que le Bureau de statistique de l'Organisation des Nations Unies fait paraître depuis 1948.

Le sujet spécial cette année est un sujet nouveau, à savoir l'evolution historique de l'effectif et des caractéristiques des populations de plus de 200 pays et territoires. Des séries chronologiques des résultats des recensements de population ont été établies séparément pour chaque sexe à partir des dénombrements effectués entre 1900 et 1961; en outre, on a calculé les taux d'accroissement intercensitaires pour les deux sexes. Les caractéristiques géographiques de la population pour la période 1920-1961 sont indiquées par des séries montrant le pourcentage de la population vivant dans des zones urbaines, dans des localités de 20 000 habitants ou plus et de 100 000 habitants ou plus, ainsi que par des estimations de la population totale pour chaque année, et du nombre d'habitants vivant dans la capitale et dans chaque ville de 100 000 habitants ou plus pendant la période 1940-1961. Ces statistiques sont complétées par des séries d'estimations de la population classée en fonction de caractéristiques démographiques telles que l'âge, le sexe, l'aptitude à lire et à écrire, la situation matrimoniale et la situation économique pour la période 1920-1961.

Les tableaux de base de *l'Annuaire* restent inchangés. Comme d'habitude, on y trouve des données revisées et complétées sur la superficie des pays et territoires et sur la densité de leur population; des séries indiquant les mouvements de la natalité, de la mortalité générale, de la mortalité infantile, de la nuptialité et de la divortialité; des répartitions des naissances selon l'âge de la mère, des décès selon l'âge et le sexe, des décès selon la cause et des mariages selon l'âge des conjoints, et enfin des valeurs de l'espérance de vie.

Le chapitre premier intitulé *Ce que nous savons de l'état et de l'évolution de la population mondiale* traite des méthodes permettant d'évaluer l'exactitude de l'estimation de la population mondiale. Le chapitre II, *Notes techniques sur les tableaux statistiques,* contient les renseignements habituels sur la portée géographique des tableaux, ainsi que des données techniques sur la comparabilité des chiffres.

Le Bureau de statistique tient à remercier ici le Service de la population de la Direction des affaires sociales du Département des affaires économiques et sociales de l'ONU, qui a bien voulu se charger du classement des estimations de population selon la méthode d'établissement desdites estimations, classement qui est régulièrement donné dans le tableau 1, et de la préparation des estimations rectifiées pour le monde entier, les continents et les grandes régions géographiques du monde (tableau 2) ainsi que du texte du chapitre premier où l'on évalue la fiabilité des données mondiales.

*
* *

L'Annuaire démographique s'intègre dans l'ensemble de publications complémentaires que font paraître périodiquement l'Organisation des Nations Unies et les institutions spécialisées pour fournir des statistiques de base aux démographes, aux économistes, aux sociologues et aux spécialistes de l'hygiène publique.

En particulier, l'intérêt que l'Organisation des Nations Unies porte au vaste domaine de la démographie générale et celui de l'Organisation mondiale de la santé à l'égard des statistiques indispensables pour l'étude des problèmes sanitaires forment la base d'une coopération étroite entre ces deux organisations qui rassemblent et publient de concert des données sur la population, des statistiques de l'état civil et d'autres séries connexes. Conformément au plan de coordination, l'*Annuaire démographique* de l'Organisation des Nations Unies occupe une position centrale dans l'ensemble des recueils internationaux de statistiques démographiques. Les publications de l'Organisation mondiale de la santé, en particulier celles de la série intitulée *Statistiques épidémiologiques et démographiques annuelles,* reproduisent certaines des données rassemblées dans l'*Annuaire démographique* afin de les rendre plus accessibles au corps médical et aux agents de la santé publique. En outre, l'Organisation mondiale de la santé publie chaque année des statistiques sur les décès selon la cause, l'âge et le sexe; des séries détaillées sur les décès imputables à certaines causes; des données sur les cas de maladies à déclaration obligatoire et sur les décès dus à ces maladies ainsi que d'autres statistiques présentant un intérêt de point de vue médical, qui, toutes, viennent compléter les tableaux de l'*Annuaire démographique.*

Ensemble, ces publications de l'Organisation des Nations Unies et de l'Organisation mondiale de la santé contiennent toutes les catégories principales de statistiques démographiques et sanitaires; il convient de les consulter concurremment si l'on veut connaître dans tout leur détail les statistiques rassemblées à ce sujet sur le plan international.

NOTE ON GEOGRAPHIC AREAS

The form of presentation in this *Yearbook* does not imply official endorsement or acceptance by the United Nations of the status or boundaries of the territories as listed or described. It was adopted solely for the purpose of providing a convenient geographic basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographic units for which data are presented.

NOTE SUR LES UNITES GEOGRAPHIQUES

Il ne faudrait pas conclure de la présentation adoptée dans cet *Annuaire* que les Nations Unies approuvent ou reconnaissent officiellement le statut ou les limites des territoires mentionnés. Ce mode de présentation n'a d'autre objet que de donner un cadre géographique aux séries statistiques publiées. La même réserve vaut également pour toutes les notes et explications relatives aux pays et territoires qui figurent dans les tableaux.

CHAPTER 1: *HOW WELL DO WE KNOW THE PRESENT SIZE AND TREND OF THE WORLD'S POPULATION?*

For the middle of 1959, the number of human beings in the world was estimated as 2,907 million, an increase of 412 million over the estimate for mid-year 1950[1]. If these figures were exact, they would mean that world population increased, from 1950 to 1959, at an average annual rate of 1.72 per cent; and in absolute numbers, the annual arithmetic average addition to world population would now stand at about 46 million. Are the estimates accurate enough to support such inferences? What is the range of possible error in the estimated world totals and the figures for world regions?

METHOD OF ANALYSIS

These questions cannot be answered precisely because, in most cases, the degree of reliability of the data upon which the estimates for the various countries rest is not definitely known. Some indication of the magnitude of possible errors can be obtained, however, by considering the methods used for making the population estimates in the different countries.[2]

The majority of the world's countries supply the United Nations with current population estimates in response to a questionnaire which also calls for certain information regarding the method of making the estimates. The information in the questionnaire, supplemented where necessary with data from other sources, has made it possible to classify most of the current population estimates according to their mode of construction. The results of this classification are expressed in a code which accompanies the population figures published in Table 1 of this *Yearbook* (see page 99) as well as as in the quarterly issues of the *Population and Vital Statistics Report*.[3]

Two fundamental elements are usually involved in a population estimate: (a) the "base data", that is, the results of a census or other information relating to the size of the population at a given date in the past, and (b) the "time adjustment", that is, the estimate of population increase or decrease since the date of the base data. The code used in classifying types of estimates has these two elements plus two others concerned with recency of the base data, and the apparent quality of the time adjustment. The symbols of the code together with an exhaustive explanation of its elements can be found on pages 19-22 of Chapter II, but, for convenience, they are reviewed briefly below.

Part I. Nature of base data
- **A** – Complete census of individuals
- **B** – Sample census or survey
- **C** – Partial census or registration; annual count
- **D** – Conjecture
- **. .** – Nature of base data not determined

Part II. Recency of base data
A numeral suffix to the first part of the code, indicating, to the nearest integral, the number of years since base data were last established.

Part III. Method of time adjustment
- **a** – Adjustment by continuous population registration
- **b** – Adjustment based on calculated balance of births, deaths and migration
- **c** – Adjustment by assumed rate of increase
- **d** – No adjustment; base figure held constant at least two consecutive years
- **x** – Adjustment derived from regional population estimates
- **. .** – Method of adjustment not determined

Part IV. Quality of time adjustment
- (i) Adjustments of types **a** and **b**
  - **1** – Population balance adequately accounted for
  - **2** – Adequacy of accounting for population balance not determined
  - **3** – Population balance not adequately accounted for
- (ii) Adjustments of type **c**
  - **1** – Two or more censuses taken within decennial intervals
  - **2** – Two or more censuses taken but within intervals exceeding a decennium
  - **3** – One or no census taken

The fourth part of the code, describing the quality of the time adjustment, relates directly to the accuracy of the population estimate. Where current estimates are calculated with statistics of births and deaths, and possibly also international migration statistics, the balance of increments and decrements is regarded as "adequately accounted for" if the extreme combination of possible errors in the recorded numbers of births, deaths, and

---

[1] See page 118.

[2] An analysis of the methods used in constructing the 1955 mid-year population estimates was presented in Chapter I of the 1956 *Demographic Yearbook*.

[3] *Population and Vital Statistics Report*. Series A, Vol. XIII, No. 1. (United Nations publication: Publishing Service, United Nations, New York)

migratory balance — or that resulting by omission if the migratory balance is not taken into account — is unlikely to exceed one-half of one per cent of the total population in a year. The accuracy of birth and death registration also has a bearing; evaluation of this factor is often furnished in the questionnaires, if not it is sometimes available from other sources. In some instances, the accuracy with which population was estimated at the date of the last census also furnishes a useful guide. The sum total of this evidence allows a code of "1" or "3" to be assigned. In many instances, however, the quality of the time adjustment made by this method cannot be clearly determined, in which case the code symbol "2" is used.

Time adjustments by means of assumed rates[4] of population increase do not take account of year-to-year fluctuations in actual rates of population increase and therefore cannot be highly reliable, irrespective of the manner in which the assumed rates are calculated. An element of judgement is involved in any estimate of type **c**. The basis for judgement is improved where two or more censuses have been taken at fairly regular intervals in the past; hence, the periodicity and frequency of censuses are criteria of the probable reliability of time adjustments of this type.

The quality of estimates is also affected by the recency of the last census or other base data. The more time that has passed since the base data were established, the more error is likely to accumulate in the time adjustment.

It is also evident that the accuracy of current estimates depends on the accuracy of the base data. Though there are wide variations, complete censuses of individuals, as a rule, yield more accurate population totals than sample censuses or surveys, and these in turn are usually more reliable than other methods of determining the population at the base date. The letters **A**, **B**, **C** and **D** in the first part of the code, therefore, denote decreasing orders of probable reliability. Variations in the accuracy of base data of each type, however, are considerable. It is unfortunate that the practice of estimating the amount of error in base data, by such methods as post-censal verifying samples, is still rather infrequent. Hence, the quality of the base data, that is, the population of various countries, cannot yet be assessed systematically enough for the purpose of coding. It is chiefly for this reason that the code provides only a clue, not a definite measure, of the reliability of current population estimates.

Despite the limitations of the code as a measure of estimate accuracy, its elements do provide a convenient axis for assessing reliability. The analysis which follows is, therefore, presented in these terms, beginning with the estimates of four major countries, followed by a survey of the methods employed for the remainder of the world's population and concluding with a consolidation of the findings of these two investigations into an evaluation of the data for the world as a whole.

THE FOUR LARGEST POPULATIONS

Approximately one-half of the world population as shown in Appendix I is accounted for by the population of four countries: China (mainland), India, the Union of Soviet Socialist Republics, and the United States of America. The shares of these four countries in the 1959 estimates of population in major world regions were as follows:

World and continents	*Total population*[a]	*Four largest populations*	*Remainder*
World total ...	2 901 834 000	1 459 800 000	1 442 034 000
Africa	246 700 000	.	246 700 000
North America ..	259 673 000	177 700 000	81 973 000
South America ..	135 995 000	.	135 995 000
Asia	1 612 317 000	1 071 600 000[b]	540 717 000
Europe	421 290 000	.	421 290 000
Oceania	15 359 000	.	15 359 000
USSR	210 500 000	210 500 000	.

[a] These totals, obtained by addition of the estimates for the different countries, as shown in Appendix I, page 10, differ slightly from those shown on page 118, because the latter include certain corrections for over- and under-estimation of national figures and also allowances for populations not covered by the national estimates.
[b] The estimate for China refers to 1958.

The reliability of world population estimates obviously depends very largely on the accuracy with which the populations of these four countries are known.

BASE DATA

All four of these populations are now estimated on the basis of census results: the United States census of 1950, the Indian census of 1951, the census of China (mainland) in 1953, and the USSR census of 1959. In the United States and India, censuses have been taken at decennial intervals, in years ending with 0 and with 1; thus, a new census for the United States was taken on 1 April 1960 and one in India on 1 March 1961. Until the results of these current censuses become known, information is very recent in the USSR, fairly recent in China (mainland), and less recent in India and the United States.

In the United States, the 1950 census was followed by a sample field check to verify the accuracy of the enumeration. A net underenumeration of 1.3 per cent of the population was revealed. For the Indian Census of 1951, a net underenumeration of 1.1 per cent was determined by a verifying sample. But even field checks or sample verifications cannot be perfectly accurate. A subsample of the field check in the United States suggested that not all omissions were discovered in the check; thus, it appears reasonable to suggest that the net error in the censuses, both of India and the United States, may have been an understatement of between 1 and 1.5 per cent.

The accuracy of the recent Soviet census cannot yet be evaluated with such assurance, since no results of verifying field checks have yet been published. However, the careful elaboration of the census procedures and the wealth of experience already available to the Soviet statisticians, as well as the fact that pre-tests and experimental censuses preceded the actual enumeration, are reasons to believe that this census was probably no less accurate than those of India and the United States. The consistency of the Soviet census result with previous estimates is an additional reason for confidence in its accuracy. A population of 200,200,000 was estimated for April, 1956, and the published vital statistics imply an annual increase at the rate of 1.75 per cent. At this rate, the popu-

[4] Usually these are constant rates, but sometimes also constant annual amounts of increase are assumed. In some instances, the assumption involves rates of increase changing with time in accordance with a mathematical formula.

lation would have grown to about 209.8 million by 15 January 1959, only 0.5 per cent more than the census total of that date, which was 208.8 million. On the assumption that the conditions affecting accuracy were similar to those in India and the United States, a maximum net underenumeration of 1.5 per cent is indicated. In the case of the Soviet census, however, there is no actual evidence of any net underenumeration. The range of possible error in the total may therefore reasonably be placed between the limits of zero and an undercount of 1.5 per cent.

It is much more difficult to appraise the Chinese census of 1953. A sample spot check of enumeration in the field was reported to have revealed omissions of 0.25 per cent and duplications of 0.14 per cent, or a net undercount of only 0.11 per cent. The true error, however, was probably much larger. Such accuracy as the reported results of the check imply has hardly been matched even in the countries where conditions of census-taking are almost ideal, and it would be unlikely that this could have been achieved under such conditions as existed in China, where the first modern census was being taken in a vast, poorly mapped country with a huge and largely illiterate population lacking a tradition of maintaining accurate statistical records. The 1953 census, moreover, was not carried out entirely by canvass; in large parts of the country, the count was apparently made at registration offices to which the householders were obliged to report. Although the means of enforcing reporting may have been relatively efficient, some inaccuracies would be expected, if for no other reason than that the work extended over a period of many months during which births, deaths, migration and lapse of memory would have produced errors not easily corrected afterwards. Furthermore, it appears that in some parts of the country it was not found possible to carry out the census completely, and estimates of the population in these areas had to be made by reference to existing records. It is hard to say whether the errors would have tended towards an over-count or an undercount; conditions in this large country must have varied from place to place, and some of the errors may have been compensatory. A total of 575 million was estimated for 1952, only 8 million less than the 1953 census total; but errors in the 1952 estimate may have been of a similar type, making it dubious whether these two figures should be regarded as quite independent of each other. Hence, while it is possible that the 1953 census total was close to the truth, the available information does not preclude the possibility of a large error. Census experience in other parts of the world, where conditions have been similar in some respects, suggests that an allowance for a possible error of plus or minus 5 per cent would be appropriate in this instance.

Accordingly, the population of the United States in 1950 may have been anywhere between 153 and 154 million; that of India in 1951, between 365 and 367 million; that of China (mainland) in 1953, between 553 and 612 million; and that of the USSR in 1959, between 209 and 212 million.

TIME ADJUSTMENT

For the United States, population estimates are carried forward by means of statistics of births, deaths, immigrants and emigrants. The vital statistics are known to be nearly but not absolutely complete, so slight corrections are introduced to compensate for possible omissions. Migratory movements by sea and air are probably quite accurately recorded, but some clandestine and other unrecorded movements may occur across the land boundaries. All considered, it seems likely that between 95 and 100 per cent of the actual population increase is accounted for in the calculated balance.

For the USSR, available evidence shows that at least the balance of recorded births and deaths can be calculated. International migration, in any event, is likely to be relatively quite small. Because of long practice and tradition, and the detailed attention given to efficient procedures, it is probable that the calculated balance of population change since the census date is not significantly less accurate than in the United States. Hence, it is likely that between 95 and 100 per cent of the population increase is accounted for in the Soviet Union.

The position is less satisfactory in India where statistics of birth and death are very incomplete. Here, annual population estimates are made by assuming continuation of the rate of population increase observed between the censuses of 1941 and 1951, an increase which averaged 1.31 per cent per year. Actually, because of declining mortality, a considerable acceleration of population growth must have occurred since 1951. Population growth from 1941 to 1951, furthermore, was retarded somewhat by local famines during the war and large-scale population displacements after the war's end. According to estimates calculated for a recent population projection,[5] the annual rate of natural increase probably rose to 1.72 per cent per annum by 1956, and might well attain 2.09 per cent by 1961. In this projection, account was taken of the probable effects of the programmes for the control and eradication of malaria, as well as other public-health measures. Thus, instead of 1.31, the average annual percentage increase during 1951-58 may have been of the order of 1.7 per cent, if not more. Because of the large measure of uncertainty, an average rate of increase anywhere in the range from 1.5 to 1.75 per cent a year may be regarded as plausible for the 1951-58 period. Hence, in the course of seven years, the population may have increased by as little as 11.0 per cent or as much as 12.2 per cent but very likely not as little as the 9.6 per cent indicated by the official estimates.

The area of doubt is much larger as regards the increase in the population of China (mainland). At least in 1954 and 1955, estimates of the total population were compiled from annual reports of the provincial and municipal administrations. The figure for 1956 is a provisional estimate based in part on rough approximations, as some of the local reports had not yet been received when it was published. The rounded figure of 669,000,000 for 1958 is evidently an approximation of the same type. Moreover, the methods of updating provincial and municipal population estimates have not been disclosed. Like the census procedure itself, these methods probably vary considerably from place to place, ranging perhaps from fairly efficient continuous population registration to the use of quite rough assumptions,

[5] A. Coale and E. Hoover, *Population Growth and Economic Development in Low-Income Countries,* Princeton, N. J., U.S.A., 1958. Table 6, p. 38.

and it is not known which type of procedure predominates. In view of these factors, the possibility of large errors may be anticipated, and for a recent projection,[6] rates of increase ranging between 1.5 and 2.2 per cent per annum were assumed for 1953-58.

1959 ESTIMATES

Allowing for the suggested range in the census results and in the factor used for time-adjustment, the following ranges for mid-1959 population estimates for the four large areas appear plausible:

	Millions
China (mainland)	605 – 697
India	413 – 424
USSR	211 – 214
United States	178 – 181

The sums of these limits range between 1,407 and 1,516 million, but since it is unlikely that either extreme of the range would have been reached in all four cases, limits of 1,416 and 1,508 million are acceptable for the aggregate.[7]

1950-59 RATES OF INCREASE

Proceeding similarly in respect of estimates for mid-year 1950, one can estimate the rates of probable population increase during 1950-59 to be in the following ranges:

	Average annual per cent increase 1950-59
China (mainland)	1.2 – 2.3
India	1.5 – 1.7
USSR	1.7 – 1.8
United States	1.7 – 1.8

For these four countries combined, the rate of increase during 1950-59 can be placed between 1.5 and 2.0 per cent per annum. In India, a further decline of mortality has probably caused population growth to accelerate during the past several years. Recent population growth in China (mainland) has also probably been more rapid than the estimated average for the period 1950-59 would indicate. However, a more precise estimate of the current rate of population growth in these areas can scarcely be made in the present circumstances.

THE REMAINDER OF THE WORLD'S POPULATION

For the rest of the world, i.e., excluding USSR, USA, China (mainland) and India, available information concerning the quality of population data is not adequate for a country-by-country appraisal of the population estimates, such as has been attempted for the four largest populations. The remaining countries will therefore be considered more summarily, with reference primarily to the type-of-estimate code and with the help of approximate formulae to represent typical margins of error in estimates of each type.

The analysis refers to the population estimates for mid-year 1959 published in Table 1, page 99, and reproduced in rank order by size in Appendix I, page 10. When a 1959 mid-year estimate was not available, but a 1959 estimate of other date was, this has been substituted. For members of the United Nations lacking a 1959 estimate, the latest available, irrespective of date, has been given in a footnote, together with the corresponding code. For a few populations, most of them small, unofficial estimates have been prepared by the United Nations Secretariat pending receipt of an official figure; in these instances, the base data are coded as usual while the method of time adjustment is designated by the letter **x** as described on page 21. Where the method of time adjustment used for an official estimate was not known or not of a systematic nature permitting its description by a simple code, two dots ".." were substituted. Only for three populations are the types of base data likewise unknown;[8] these are shown with three dots "..." in the code column. The analysis which follows makes use of the codes described above as well as, where necessary, those provided in the Appendix footnotes.

BASE DATA

Table A shows the distribution of estimated population – other than the four largest populations already dealt with – according to types of base data used in the construction of the estimates. The great majority of the world's population is now documented by complete censuses of individuals (type **A**),[9] but a significant part is still estimated on the basis of partial census or registration or annual administrative count of inhabitants (type **C**).

It will be noted that the distribution is uneven among the continents, as shown by the percentages. Virtually all the estimates for the Americas and for Europe, but less than two-thirds of those for Africa and for Asia, excluding India and China (mainland), are estimated on the basis of censuses. About one-fifth of the populations of Africa and Asia are based on an annual "count", or on a partial census or partial registration of inhabitants.

Some of these base data are recent, others quite old. At the time of writing, the most recent base censuses are those of the USSR (not included here) and Uganda. Some base data of other types, e.g. sample surveys, counts of taxpayers or voters, have also been established quite recently. On the other hand, the latest census taken in Uruguay is that of 1908.

In Table B, estimates are classified by the date when base data were last obtained. In the "world" total – from which the four largest populations are excluded – the greatest concentration appears in the years 1950, 1951, 1955 and 1956. To a large extent this reflects the internationally recommended practice of taking at least decennial censuses, preferably in years ending with 0 or 1

[6] *The Population of Asia and the Far East, 1950-1980.* ST/SOA/Series A/31. (United Nations publication: Sales No.: 59.XIII.3)

[7] Theoretically, independent errors are aggregated as the square root of the sum of squares of the component errors.

[8] Somalia, San Marino and the Holy See, with a combined population of 2 007 000.

[9] When the four largest nations are included in the world total, the proportion of population estimates based on censuses rises to about 90 per cent.

and also the practice adopted by some countries (e.g. Canada, Japan, New Zealand and Turkey) of conducting censuses every five years. The figures for 1956 are augmented also by the housing census of the Federal Republic of Germany, which was in effect a census of the population, providing a new basis for the current population estimates, and by French territories in Africa where partial censuses were carried out in that year.

[a] Excluding China (mainland), India, the USSR, and the United States from world total and appropriate continent.

The details of Table B are summarized in Table C. Excluding the four largest populations, the data on which world population estimates for 1959 are based are now 6.2 years old on the average, the mean age of census data being 7.0 years, and of other data (sample surveys, partial censuses, non-censal counts and conjectures), 3.4 years. Base data for the Americas and Europe are now relatively the oldest; those for Africa, Asia and Oceania are, on the whole, more recent.

When the censuses of China (mainland), India, the

Other types	3.4	2.0	6.0	...	4.1	4.0	4.6

[a] Excluding China (mainland), India, the USSR and the United States from world total and appropriate continent.

USSR and the United States are also taken into account, the mean age of base data for the world population estimate is 5.9 years. A renewal of base data is to be expected when, in conformity with international recommendations, censuses are taken in 1960 and 1961.[10]

Until new base data are provided, current estimates continue to deteriorate with time through an accumulation of errors in the time adjustment. It does not follow, however, that estimates for Africa, for example, are generally more accurate than those for the Americas or for Europe. Censuses repeated at regular intervals are likely to be more accurate than censuses taken sporadically, or for the first time. Furthermore, current estimates deteriorate more rapidly where crude assumptions regarding the rate of growth must be made than where accurate data on births, deaths, and migration are available for calculation of the time adjustment.

[10] As of 1 March 1961, a total of 61 censuses were known to have been carried out in 1960.

TIME ADJUSTMENT

An indication of the distribution of population estimates by the method of bringing base data forward to current dates is provided in Table D. In a number of instances, notably in Africa and Asia, these methods could not be precisely ascertained. Where the methods have been clearly described, it appears that assumed rates of increase (**c**) are used almost as frequently as calculated population balances (**b**). The use of calculated balances predominates in Europe and Oceania and is widespread in North America. On the other hand, rates of increase are being assumed for a majority of the South American and Asian nations and for a large part of North America as well. It is also very common in Africa, though in that continent local administrative counts are compiled from time to time, permitting an up-dating of population estimates by methods which cannot be classified by any simple scheme.

A more detailed presentation of ascertained methods

Table D. Estimated mid-1959 population according to method of time adjustment used in constructing the estimates

Method of time adjustment	*World Total*[a]	*Africa*	*North America*[a]	*South America*	*Asia*[a]	*Europe*	*Oceania*

[a] Excluding China (mainland), India, the USSR and the United States from world total and appropriate continent.

of time adjustment (types **a**, **b** and **c**) appears in Table E. The difference between types **a** and **b** lies in the fact that, in a continuous population register, entries are maintained for each individual, new entries being added with births and arrivals of migrants, and old entries deleted with deaths and departures of migrants, permitting a balance of the number of inhabitants to be struck directly from the existing records; such a system provides internal checks and safeguards which can make it more accurate than a balance calculated from totals of registered births, registered deaths, and migration records. In both instances, however, there is a wide variety in the accuracy of the underlying statistics. Numeral "1" denotes cases where annual errors in the balance amounting to 0.5 per cent of the population are unlikely to occur; numeral "3" those where errors of this magnitude or larger are quite likely. Where the likelihood of error could not be ascertained, numeral "2" was used.

The accuracy of assumed rates of increase cannot be objectively ascertained, since, in any event, an element of judgment is involved. A decreasing order of reliability could nevertheless be established for estimates of type **c**, with regard to the frequency and periodicity of censuses. Estimates preceded by two or more censuses within at least decennial intervals are coded $\mathbf{c_1}$ since, in these circumstances, the record of past trends provides a relatively good basis for assumptions. Where there have been two or more censuses, but decennial intervals have been exceeded, the code is $\mathbf{c_2}$. In other instances of assumed rates, the basis for judgment is considerably poorer as a rule, and the code is $\mathbf{c_3}$.

In calculated annual balances, year-to-year fluctuations in population growth are more or less faithfully reflected; but the same is not true where population estimates are made with an assumed rate. In the former case, changes in rates of population growth can be legitimately inferred from the population estimates. To do so from estimates made with assumed rates, however, is merely to infer a foregone conclusion.

The largest single population aggregate in Table E is for Europe where estimates are up-dated by a balance of adequate data on births, deaths and migration. The same method is used on a smaller scale in Asia (notably Japan), the Americas and Oceania. If the United States and the USSR are included, the world total corresponding to method $\mathbf{b_1}$ amounts to 864 million.

Adjustment by rates of increase assumed from the results of periodic censuses ($\mathbf{c_1}$) is used for large populations in Asia and South America and smaller populations in other continents. Since India also falls in this category, the world total corresponding to method $\mathbf{c_1}$ can be put at 740 million.

Continuous population registers with accurate coverage are found in certain countries of Northwestern Europe and also in China (Taiwan). The time adjustments of the population estimates for the Republic of Viet-Nam and Syria, a province of the United Arab Republic, also depend on procedures of this type, but there are gaps in the coverage of the registers.

A large part of the population of Africa is estimated by assumed rates, but the basis for such assumptions, in the absence of a series of censuses, is often quite tenuous (type $\mathbf{c_3}$). Likewise, in those African populations where the annual population balance is calculated, the vital statistics are defective ($\mathbf{b_3}$).

Table E. Estimated mid-1959 population according to apparent quality of time adjustments (millions)

Quality of time adjustment	*World Total*[a]	*Africa*	*North America*[a]	*South America*	*Asia*[a]	*Europe*	*Oceania*

[a] Excluding China (mainland), India, the USSR and the United States from world total and appropriate continent.

1959 ESTIMATES

A beginning has been made in some countries in ascertaining the accuracy of census and vital statistics data by means of field checks. Unfortunately, the countries in which this has been done are still very few. Some idea of the accuracy of population data can also be gathered from the re-calculation of inter-censal population balances, or from a comparison of improved data, such as the results of a new census, with previous population estimates.

While it is not possible to consider individually every one of the numerous population estimates presented in the Appendix, a rough measure of their reliability in the aggregate can nevertheless be deduced from the scattered evidence at hand. For this purpose, error ranges of a magnitude which seem typical can be imputed to each element of the estimates of a given type[11] and the errors in the different elements can be combined by a simple formula.[12] The resulting error ranges computed for each country can then be aggregated on the assumption that errors in individual estimates are partly compensatory, but not as much so as would be expected if they were distributed at random.[13]

The latter assumption is needed since similar errors probably occur in numerous estimates. Earlier non-censal counts have usually proved to be deficient when the first census was taken. Censuses usually omit a part of the child population, if not also of other age groups. Vital statistics often tend to underestimate population increase, since larger numbers of births than of deaths are likely to be omitted. Assumed rates, extrapolated, from past observations, often fail to take into account the effects of continuing declines in mortality. In all these instances, therefore, the tendency will be towards more frequent underestimation than over-estimation of the population.

For these reasons also, it seems reasonable to distribute error ranges for the aggregates of population estimates unequally in the positive and negative directions, by allowing three-quarters of the range for underestimation and one-quarter for over-estimation of the population. In this manner — omitting the four largest populations — the following limits have been arrived at for the estimated mid-1959 population totals of the continents.

	Millions
Africa	243 — 257
North America	81 — 84
South America	134 — 142
Asia	534 — 562
Europe	420 — 427
Oceania	15.4 — 15.8

Still excluding the four largest populations, the remainder of the world population can now be estimated within the limits of 1,431 and 1,476 million.[14]

1950-59 RATES OF INCREASE

Proceeding on the same assumptions, errors in rates of increase can likewise be aggregated.[15] Applying the calculated error ranges to the rates of increase estimated for the 1950-59 period, one obtains the following limiting estimates for the average annual rates of increase for each continent, excluding the world's four largest populations:

	Per cent per annum
Africa	1.8 — 2.3
North America	2.7 — 3.1
South America	2.1 — 2.6
Asia	1.8 — 2.3
Europe	0.7 — 0.9
Oceania	2.2 — 2.5

For the combined world population, from which the four largest nations are excluded, the rate of increase, during 1950-59 can be assessed between 1.6 and 1.9 per cent per annum.

TOTAL WORLD POPULATION

As already indicated, one-half of the world's population is found in China (mainland), India, the USSR and the United States. The errors calculated separately for these four countries and the rest of the world can now be compounded. It should be noted that, because of a greater chance of compensating errors, the remainder of the world's population can be estimated more accurately than the sum of the four largest populations.

The four largest populations may have had a combined 1959 population anywhere from 1,416 to 1,508 million, a range of 92 million. For the remainder of the world, the 1959 aggregate population is estimated to lie between 1,431 and 1,476 million, a range of 45 million. Assuming the two sets of errors to be independent, and using the formula in note [15] below, one can estimate the world population, in mid-year 1959, as falling between 2,853 and 2,964 million, a range of 111 million. It is evident

---

[11] Error ranges of approximately the following magnitudes appear typical (per cent of estimated population):

a) in base data: 1.0 per cent in censuses taken at least decennially;
2.0 per cent in censuses taken sporadically;
3.5 per cent in censuses taken for the first time;
5.0 per cent in data based on a sample survey;
10.0 per cent in data based on an unconventional count; and
20.0 per cent in data obtained by mere conjecture.

b) in time adjustments: (per cent of estimate population, for each year adjusted):

0.1 for type $\mathbf{a}_1$	0.2 for type $\mathbf{b}_1$	0.6 for type $\mathbf{c}_1$	1.6 for type **d**
0.2 for type $\mathbf{a}_2$	0.4 for type $\mathbf{b}_2$	0.8 for type $\mathbf{c}_2$	1.0 for type **x**
0.4 for type $\mathbf{a}_3$	0.8 for type $\mathbf{b}_3$	1.2 for type $\mathbf{c}_3$	1.2 for type . .

[12] $E = B + t\,T$, where E is the range of per cent error in the current estimate, B the range of per cent error imputed to base data, t the number of years since base data were established, and T the range of annual per cent error imputed to the time adjustment.

[13] Aggregation was carried out first according to the assumption that errors were all in the same direction; this was done by simply adding the constituent error ranges together. Next, an assumption was made that errors were completely independent of each other, so that errors in the aggregate would tend to equal the square root of the sum of squares of constituent errors. Finally, the geometric mean of the two results was taken.

[14] Range obtained by aggregating the continental error ranges by the same principle as stated in the preceding footnote.

[15] For individual estimates, the formula $e = T\ (1 + E)$ was used, where e is the error range (absolute amount) in the annual per cent rate of increase, T the error range imputed to the time adjustment (see footnote [11]) and E the error range calculated for the population estimate (by the formula of footnote [12]). Aggregation was carried out according to the same principle as stated in footnote [13].

that the estimate for China (mainland), to which an error range of 92 million was imputed, is a major factor of uncertainty in the world total.

Similarly the 1950-59 average rate of increase, estimated in the range of 1.5 to 2.0 per cent per annum for the four largest populations and 1.6 to 1.9 per cent per annum for the remainder of the world, can be placed, in view of possibly compensating errors, between 1.6 and 1.9 per cent per annum for the world as a whole.

On the basis of the calculated 1950-59 rates, one can estimate the average annual increments to world population during this interval in the following ranges:

	Millions
World total	42 – 52
Africa	4.0 – 5.3
North America	4.7 – 5.2
United States	(2.8 – 3.0)
Remainder of North America	(1.9 – 2.2)
South America	2.6 – 3.2
Asia	21.5 – 32.6
China (mainland)	(6.9 – 14.3)
India	(5.8 – 6.7)
Remainder of Asia	(8.8 – 11.6)
Europe	2.9 – 3.7
Oceania	0.3 – 0.4
USSR	3.3 – 3.6

Actually, in view of declining mortality, it is virtually certain that the rate of world population growth has now surpassed 1.5 per cent per annum, and quite possible that it has attained 2.0 per cent per annum. Because of this decline of mortality, world population certainly increased in the year 1959 by at least 45 million, and possibly by as much as 55 million. Again it is evident that much of the uncertainty is caused by the lack of precise knowledge regarding the population of China (mainland). Large margins of error must also be allowed for in the estimated annual increases in India, in other parts of Asia, and in Africa.

In summary, the 1959 world population can be put at about 2,910 million, with an error of plus or minus about 50 million. By 1959, the annual increase in world population probably attained 50 million, plus or minus 5 million.

The assessments made in the foregoing are tentative, depending largely on assumptions which, although they seem plausible, are far from precise. They illustrate the need for determining more accurately the margins of error of available population estimates.

To give one example, it is not clear whether the annual population increase in Europe is now greater or smaller, in absolute amount, than that in the United States, in South America, or in the USSR, though population estimates in all these areas are comparatively accurate. It is far less clear whether the average rate of population growth is now higher in Asia or in Africa.

Population trends are often considered jointly with trends in aggregate income, food output, international trade, and so forth, in order to determine how economic achievements compare with increasing requirements. But, so long as the error margins of the statistics are not assessed, it is often unclear whether the inferences derived from such comparisons are valid.

The reliability of the population estimates depends on the extent of knowledge regarding the quality of the data and assumptions from which the estimates are built up. The more that is known about the accuracy and comparability of the basic and current statistics, the more narrowly can the error margins of the estimates be defined. It is therefore highly desirable that errors in censuses, vital statistics, and other population data be examined as frequently and probingly as circumstances permit. Direct and careful field investigations can furnish the most convincing evidence. Valuable evidence is also provided by re-calculation of inter-censal population balances, comparison of census results with previous estimates, and descriptive information about enumeration and registration practice and performance.

Annual population estimates deteriorate as time passes, unless and until new base data are obtained. The censuses which have been and are to be taken in many countries during 1960 and 1961 will considerably improve the quality of population estimates during the next few years. These censuses will also afford an opportunity to improve existing knowledge of the possibilities of error in the estimates, by means of post-censal field checks or other investigations of accuracy. It remains to be seen to what extent the Governments will take advantage of this opportunity.

APPENDIX I

1959 MID-YEAR POPULATION ESTIMATES AND TYPE-OF-ESTIMATE CODES

Provisional official estimates are preceded by an asterisk (*). Estimates prepared by the United Nations pending receipt of a current official estimate are preceded by superscript letter "x". In constructing 1959 estimates, no account has been taken of 1960 census results.

CHAPTER II. *TECHNICAL NOTES ON THE STATISTICAL TABLES*

INTRODUCTION

SOURCE OF DATA

The statistics presented in the *Demographic Yearbook* are official data unless otherwise indicated. They have been assembled by the Statistical Office of the United Nations from data transmitted monthly and annually by the national statistical services or other appropriate governmental offices of over 200 areas, supplemented when necessary by data from official publications.

To establish comparability in so far as computation procedures are concerned, all rates and ratios (except life-table functions and a few exceptions noted in the rate tables) have been computed in the Statistical Office of the United Nations according to the methods described for each table. The populations used for the computation of rates are census results or estimates, almost all of which have been published in this or previous issues of the *Yearbook*.

In cases where differences are observed between data in this volume and those published in previous *Demographic Yearbooks,* statistics in this issue may be assumed to be revisions received in the Statistical Office by 31 December 1960.

SCOPE OF DATA

Geographic coverage

In accordance with the original plans, the geographic coverage of the tables has been made as extensive as possible, within stated limits. This means that, in general, the *Yearbook* shows in each table national statistics for as many countries and territories as provide them. Moreover, in the absence of national coverage, data of more limited scope relating to registration areas and even to individual cities have also been included, wherever these statistics were deemed of sufficient utility and interest to warrant publication. It should be emphasized that publication of all available data does not indicate that a value judgment has been made as to their accuracy. Rather, the adoption of maximum geographic coverage is made possible because of the availability of quality codes, described on p. 19 and 23.

Table 1 is the most comprehensive, showing population and area for every country—sovereign and non-sovereign—having at least 50 inhabitants. This world-wide coverage makes possible the presentation in Table 2 of aggregates for the world and 14 geographic regions. Time series of total population and vital statistics are next most comprehensive. Frequency distributions according to characteristics of the population are of more limited coverage and the geographic scope decreases as variables are introduced.

It should also be noted that rate tables are naturally somewhat more limited in geographic coverage than tables of absolute numbers. The criteria for rate computation are set forth in the table descriptions, beginning on p. 26.

Definition of territory (geographic area)

In so far as possible, both time series and frequency distributions are for the territory within the 1960 boundaries of the geographic unit specified. Whenever the territory to which data relate is other than present, footnotes have been used to describe the way in which the geographic composition of the reporting area differs from the area within 1960 boundaries.

In cases where the meaning of present territory might require clarification, because of frequent or recent boundary changes or other reasons, a brief description of the salient points has been set forth in Table 1. Notes describing territorial composition are confined to Table 1, except those explaining boundary or administrative changes which have occurred during 1960. To avoid the confusion which might result for the transition year, the current territory of these few areas is described in notes to all tables where they appear, even though the statistical coverage conforms to the present territory.

Definition of population

In assembling national statistics for publication, the basic aim has been to obtain data for the present-in-area or *de facto,* rather than for the habitually resident or *de jure* population. Thus, unless otherwise noted, population statistics and vital statistics include data for both nationals and aliens, native and foreign-born, aborigines, jungle tribes, nomadic peoples, displaced persons, internees, refugees and any other group present within the borders of a country or territory at a specified time.

It should be noted, however, that when the required statistics were available, population estimates have been adjusted or modified to include national armed forces and diplomats stationed outside the country, and to exclude alien armed forces, foreign diplomats and enemy prisoners of war stationed in the area. For clarity, such adjustments are explained in the tables both where the population figures are shown and, if necessary, where these figures are used in the computation of vital-statistics rates. For a more complete explanation of the adjustment, see p. 17.

NOMENCLATURE

Table 1—the most comprehensive in terms of geographic coverage and description—also serves as a guide

to current official nomenclature or terminology, the country names used therein being the full official titles in use in the United Nations as of 31 December 1960.[1]

In other tables, however, it has been found convenient —because of space limitations—to use abbreviated or short titles for some areas. The shortened titles employed in Tables 3-23 are United Kingdom for the United Kingdom of Great Britain and Northern Ireland, United States for the United States of America, USSR, Byelorussian SSR and Ukrainian SSR for the Union of Soviet Socialist Republics, the Byelorussian Soviet Socialist Republic and the Ukrainian Soviet Socialist Republic, respectively.

Arrangement of names

The arrangement of the country names in the stub and box-heads of the tables is of two types.

Table 1 shows, for each continent and for the USSR separately (beginning with Africa and proceeding in English alphabetic order), all of the major geographic units of the world, classified according to broad administrative-status groups. Names shown first in each continent (without a category heading) represent sovereign states; these are followed by territories and dependencies, trust territories, areas under military government and condominiums, each group further classified by administering authority. All names within a category are arranged in English alphabetic order.

Tables 3-23, on the other hand, show only those geographic units for which statistics are available, and these names are arranged in straight English alphabetic order within continents. The name of the administering authority is not shown except in those cases where confusion might result because two territories have identical names.

Because of their number and importance, changes in names, administration and status which occurred during calendar 1960 are described in all the tables, rather than in Table 1 only. For convenience, they are also set forth below in chronological order. Changes which occurred in 1959 and previous years have been described in previous issues of the *Demographic Yearbook.*

1960	*Former Name*	*Current Name*	*Nature of Change*
1 January	French Cameroons	Cameroun	Independence and name
27 April	French Togoland	Togo	Independence and name
20 June	Sudanese Republic	Mali	Independence and name
20 June	Senegal	Senegal	Independence
25 June	Malagasy Republic	Madagascar	Independence and name
26 June	British Somaliland	Somalia (part)	Independence and name
30 June	Belgian Congo	Congo (Léopoldville)	Independence and name
1 July	Somaliland (Italian)	Somalia (part)	Independence and name
1 August	Dahomey	Dahomey	Independence
3 August	Niger	Niger	Independence
5 August	Upper Volta	Upper Volta	Independence
7 August	Ivory Coast	Ivory Coast	Independence
11 August	Chad	Chad	Independence
13 August	Ubangi-Shari	Central African Republic	Independence and name
15 August	Middle Congo	Congo (Brazzaville)	Independence and name
16 August	Cyprus	Cyprus	Independence
17 August	Gabon	Gabon	Independence
1 October	Federation of Nigeria	Nigeria	Independence
28 November	Mauritania	Mauritania	Independence

It should be emphasized that the designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country or territory or of its authorities, or concerning the delimitation of its frontiers. They were adopted solely for the purpose of providing a convenient geographic basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographic units for which data are presented.

EVALUATION OF QUALITY OF DATA

The attempt to differentiate demographic statistics according to their degree of accuracy, begun in the 1959 issue, has been continued in this *Demographic Yearbook.* Distinction is achieved through the use of two different type fonts—roman type for reliable data and italics for those of questionable reliability.

The basis of the dichotomous quality classification of the population series shown in Tables 1-12 was the code for estimates developed originally in 1950 and progressively modified since that time. Details of the theory and construction of the code, as well as the justification for its use in evaluation, are set forth on p. 19.

Vital statistics have been classified as reliable or unreliable according to the degree of completeness with which current vital events are registered. As in previous *Yearbooks,* complete vital statistics are judged to be those which represent at least 90 per cent of the total of births, deaths, marriages and divorces occurred in a year. The series said to be complete or reliable have been set in roman type, while others of lesser or of unknown reliability are set in italics. The regular C and U code, which is the basis of classification, may be found as usual in the trend tables and the details of its formulation are given on p. 23.

To supplement and reinforce the rough classification described above, known variations in definitions and in methods of estimation and tabulation are, as usual, set forth in footnotes to each table. The implications of the qualifications, as well as sources of error and possible misinterpretation, are reviewed in the special text for each table beginning on p. 26.

Age-reporting errors in census returns were first analysed, and censuses were classified according to reliability, in the 1952 *Demographic Yearbook.* This basic evaluation appeared in each succeeding *Yearbook* through 1955; in this issue, it has been re-introduced on page 18.

Another qualifying index, re-introduced in the 1953 *Yearbook,* has been continued. This is a dagger (†) used to distinguish those statistics which have been tabulated according to the year of registration of the vital event, rather than by the year of its occurrence. The importance of this qualification, especially in evaluating the quality of live birth statistics, cannot be overemphasized; a detailed exposition of its implications will be found on p. 24.

[1] For a majority of the areas, see: United Nations. Terminology Unit. *Names of Countries and Adjectives of Nationality.* Document ST/CS/SER.F/165, 9 March 1960, 28 pp., mimeo., and *Revised Addenda to Terminology Bulletin No. 165.* Document ST/CS/SER.F/165/Add. 1-6/Rev. 1, 30 September 1960.

AREA

Statistics of territorial expanse or area will be found in Tables 1 and 2 of this issue. Table 1 shows the most recent area estimate for every geographic unit of the world; Table 2 shows aggregate area for each continent, region and the world. Unless otherwise specified, all of these figures are assumed to represent total area, that is, they comprise the land area and inland waters, excluding only polar regions and some uninhabited islands. Inland waters are assumed to consist of major rivers and lakes.

SOURCES OF VARIATION

Lack of comparability between area statistics arises primarily from differences in definition; for example, total-area figures cannot be considered comparable with land area unless the amount of inland water in a country is negligible. The term "inland water" also may vary in meaning from one country to another; in one, it may comprise only major rivers and lakes (in accord with the standard), while in others, it may include, in addition, coastal bays, inlets and gulfs. Variations of this type between countries with long coastlines can jeopardize comparability.

Another problem concerns the basic area data. Some area figures are based on geodetic surveys, carried out by modern scientific means; others are simply conjectures based on random items of information. Some values are of recent origin, reflecting current knowledge and significant territorial changes up to the present time; others are not so timely and may thereby fail to take cognizance of recent boundary rectifications. Since neither the exact method of determining the area nor the precise definition of its composition and time reference is known for all countries, the values in Table 1 should not be considered strictly comparable from country to country.

Apparent inconsistency with previously published figures may be due to the introduction of improved estimates, to increases in actual land surface by reclamation, or to a change in the unit of measurement used. Since the reason for revision is not always ascertainable, the latest figures have been arbitrarily accepted as correct and substituted for values previously on file.

In this *Yearbook,* area is given in square kilometres, the conversion from square miles (if required) having been accomplished by equating 1 square mile to 2.589998 square kilometres. Use of a different factor would give slightly different results. Rounding also may affect the last digit of the value.

POPULATION

This twelfth issue of the *Demographic Yearbook* features population trends during the forty-year period, 1920-1960. Hence, population statistics account for the first twelve of the twenty-three tables, and they cover national trends in such variables as: age and sex; population in places of 20,000 and over and 100,000 and over; urbanization; literacy; economic activity, and marital status. In addition, the population of selected cities is given as well as the geographic distribution of population throughout the world.

Certain types of variation will be seen in the data. National classification schemes are not always the standard used in the *Yearbook* tables; definitions and concepts of various characteristics differ from country to country. This type of variation will be indicated on the tables whenever possible and discussed in connexion with specific distributions.[2]

There are other more fundamental sources of variation, however, which are common to all population data. They include the lack of comparability due to variation in the composition of the total population of areas, the problems of measuring underenumeration and omissions, and the difficulties of evaluating the reliability of population estimates. These are discussed below.

SOURCES OF VARIATION

Definition of total population

Variation in the coverage of the population totals for different countries is one of the most important factors to be considered in evaluating comparability.

De facto and de jure

The total population of a country is conventionally described as *de facto* or *de jure.* A true *de facto* or present-in-area concept usually implies that all persons physically present in the country—residents and non-residents—have been counted in the local area where they were at the time of the census. The *de jure* count, in contrast, comprises all persons who usually reside in the area, irrespective of where they might happen to be at the time of the census. Simple as these concepts appear, strict conformity to either of them is rarely found. Moreover, even when these terms are used with precision to describe the method of obtaining sub-national totals in a national census of population, they are often misleading when applied to the national figures in an international context. Also, the terms may correctly describe the method of enumeration (i.e., place of residence *versus* place of occurrence) but be incorrect when applied to the tabulations.

The wide variation which exists in the actual composition of national census totals defined as *de facto* and *de jure* can be seen from Table A, page 16, which shows how certain sub-groups of the population were treated in the censuses taken between 1945 and 1954 in 52 sovereign countries. It seems evident that the terms *de facto* and *de jure,* though traditionally accepted, fail to convey a clear understanding of the basic population composition. Moreover, because the terms are so loosely used, they have almost lost international meaning. Nevertheless, they are the terms encountered in connexion with national sta-

[1] Separately tabulated.

[2] Indians living in a civilized or semi-civilized state were enumerated but Indian jungle population was not included in the enumeration.

[3] Non-resident shipping and service population were not included in the enumeration.

[4] Part of the tribal areas of Assam was not included in the enumeration.

[5] Included in tabulated *de jure* total but excluded from *de facto* total.

[6] Included in tabulated *de facto* total but excluded from *de jure* total.

[7] Persons missing for a long period of time, such as prisoners of war, were enumerated as absentees.

[8] Navy crews and civilian passengers in ships at sea or in foreign ports were enumerated.

[9] Persons on vessels engaged in a coastwise or fishing voyage which returned to port within three weeks after the census date without proceeding from a port outside the British Isles were included in the enumeration.

[10] Civilized and semi-civilized aborigines were enumerated but information concerning the enumeration of aborigines living in a wild state is not available.

tistics and, as such, must be considered in using population data from different countries.

Modified de facto (international conventional total)

In an effort to increase international comparability of the results of population censuses to be taken around 1950 and provide better information for constructing world and regional aggregates, the Population Commission recommended a "modified *de facto*" tabulation.[3] This same concept has been included in the *Principles and Recommendations for National Population Censuses,*[4] designed to provide guidance for the taking of the 1960 cycle of censuses. In these recommendations, the new total is called the "international conventional total", and it is defined as "the total number of persons present in the country at the time of the census, *excluding* foreign military, naval and diplomatic personnel and their families located in the country but *including* military, naval and diplomatic personnel of the country and their families located abroad and merchant seamen resident in the country but at sea at the time of the census".

In accordance with these recommendations, the population figures shown in this *Demographic Yearbook*—both censuses and estimates—are, in so far as possible, modified present-in-area counts or, in new terminology, international conventional totals. This means that (if applicable) they *include* data for jungle tribes, aborigines, nomadic peoples, displaced persons and refugees, together with national armed forces and diplomatic personnel and their dependants stationed outside the territory, and they *exclude* alien armed forces, alien diplomatic personnel, their dependants and enemy prisoners of war stationed inside the country.[5]

Accuracy of censuses

Total population

Irrespective of whether the census is *de facto* or *de jure* in concept, the obtaining of a complete yet unduplicated count of the population of any area presents numerous problems. These problems are, of course, more pronounced in areas where the inhabitants are unfamiliar with census-taking, but it should be emphasized that they are present in every enumeration.[6]

Measuring the amount of underenumeration by post-censal field check or other means makes it possible to correct the total, but it is usually impossible to revise the distributions, except perhaps the geographic classification. Hence, the principal use of such measures is to point up the lack of completeness inherent in even the most carefully planned and executed census and to stimulate precision. To avoid misinterpretation in the various tables of the *Yearbook,* care has been taken to describe the populations, in so far as this is possible, as actually enumerated or adjusted, and to give the correction factor.[7]

Age distribution

Age – the characteristic most universally investigated both in population and vital statistics – is commonly determined on the basis of two types of questions, used singly or in combination. The first type asks for date of birth; the alternative method requires age in completed units of time, that is, age at last birthday—in years for adults and in months, weeks, or days for infants. These two methods do not necessarily result in data of equal accuracy. There is evidence that the date-of-birth type of inquiry yields more precise data than the direct question, but it is obviously of limited applicability in areas where a large proportion of the population is illiterate or unable, for other reasons, to give the exact date of birth. On the other hand, the direct question on age also may be answered incorrectly, either through ignorance or deliberate misstatement.

An additional source of variation may be found in the method of classifying the data after they are collected. The recommended method is to convert the date-of-birth information to age at last birthday by subtracting the exact date of birth from the date of the census. This age, which will be in the largest units of completed time, i.e., years, months, weeks, days, would then be classified into the age groups selected, or by single years if desired. This method of completed years is not always used, however. Some countries omit the conversion step and classify population not by age, but by the original year of birth. In such a classification, all children born in the year immediately prior to the census year would be counted as one year of age even though, if they were born 30 November and the census were taken 1 January of the succeeding year, they had completed only one month of life. Evidence of this type of classification is seen in the distributions where the under-one-year category appears smaller than it should be in relation to the succeeding categories. It should be noted, however, that for a year during which a large number of births took place, the effect may not be so clear. A good example may be seen in the single-year-of-age data for Norway 1946, published in the 1955 *Yearbook.* These data, which were classified by year of birth, show an under-1-year frequency of 69,133 persons, while the 1-year-of-age category has only 62,464. This is apparently the result of the fact that the birth rate reached its post-war peak in Norway in 1946, thus inflating the under-1-year category.

Misstatements arise from numerous factors, among which may be cited ignorance of correct age; carelessness in reporting and recording; a general tendency to state age in figures ending in certain digits, such as zero, two, five and eight, and of older persons to exaggerate age; a possibly subconscious aversion to certain numbers such as 13; and wilful misrepresentations arising from motives of an economic, social, political or purely individual character. The above-cited reasons for misstatements are common to most investigations of age and to most countries and they may impair comparability to a marked degree.

Another source of non-comparability not universal in

[7] For national estimates, see Table 1, p. 99.

effect may result from differences in the methods of reckoning age, e.g., the Western *versus* the Eastern or, as it is usually known, the English *versus* the Chinese system by which a child is regarded as one year old at birth and advances one year at each Chinese New Year. These differences are not universal, but they can affect comparability between countries.

As a result of the cited difficulties and differences in enumeration, irregularities appear in the age-sex distributions of population of many countries. These aberrations may be summarized as follows: (1) deficiency of infants and young children in the age distributions, (2) heaping at ages ending in 0 and 5, (3) a preference for even ages over odd ages, (4) unexpectedly large differences between the numbers of males and females at certain ages, and (5) unaccountably large differences between the numbers in successive or adjacent age groups. Comparison of identical age-sex cohorts from successive censuses, as well as study of the age-sex composition in each census, reveals these and other inconsistencies, some of which are characteristic of even the most modern censuses. To the extent that these irregularities are present, the usefulness of the statistics for certain purposes is affected.

Evaluation of accuracy

To measure the accuracy of age statistics on the evidence of irregularities in 5-year groups, an index was devised for presentation in the 1949-50 *Demographic Yearbook*.[8] Although this index was sensitive to various sources of inaccuracy in the data, it could also be affected considerably by real fluctuations of past demographic development. It could not, therefore, be applied indiscriminately to all types of statistics, unless certain adjustments were made and caution was used in the interpretation of results.

The publication of population statistics by single years of age in the 1955 issue of the *Demographic Yearbook* made it possible to apply a simple, yet highly sensitive, index whose interpretation is relatively free from consideration of factors not connected with the accuracy of age returns. More refined methods for the measurement of age accuracy by single years have been devised, but this particular index was selected for presentation in the *Demographic Yearbook* on the basis of its simplicity and the wide use it has already found in other sources.

The measure chosen is attributed to Whipple and has become known as Whipple's Index, or the Index of Concentration.[9] It "is obtained by summing the age returns between 23 and 62 years inclusive and finding what percentage is borne by the sum of the returns of years ending with 5 and 0 to one-fifth of the total sum. The results would vary between a minimum of 100, representing no concentration at all, and a maximum of 500, if no returns were recorded with any digits other than the two mentioned."[10]

The index is applicable to all age distributions for which single years are given at least to the age of 62, with the following exceptions: (1) where the data presented are the result of graduation, no irregularity is scored by Whipple's Index, even though the graduated data may still be affected by inaccuracies of a different type; (2) where statistics on age have been derived by reference to the year of birth, and tendencies to round off the birth year would result in overly frequent age returns with odd figures of age (as is the case with the results of the Yugoslav census of 1948), the frequency of age returns with terminal digits 5 and 0 is not an adequate measure of their accuracy.

Using the statistics for both sexes combined, the index was computed for all the single-year age statistics available as of 1 November 1956, with the exception of those excluded on the criteria set forth above. For convenience of presentation, the results were grouped in the following five categories:

		Whipple's Index
I.	Highly accurate data	less than 105
II.	Fairly accurate data	105-109.9
III.	Approximate data	110-124.9
IV.	Rough data	125-174.9
V.	Very rough data	175 and more

These categories are of necessity arbitrary and, in some instances, they separate two sets of statistics varying but slightly in accuracy. Thus, an index of 104.4 was obtained for the European population of New Zealand in 1945 whereas, for the total population of New Zealand, the index amounted to 105.2, a difference which is trivial but which causes the latter to be classified in Category II rather than I. The results of this tentative rating of 91 distributions in terms of the age accuracy of specific censuses indicated by year, were as follows:

***Category I:* Highly accurate data**

Algeria 1948 (Europeans)
Argentina 1947
Australia 1947
Austria 1951
Belgium 1947
Berlin 1946
Denmark 1945 and 1950
Eastern Germany 1946
England and Wales 1951
Faeroe Islands 1950
Finland 1950
France 1946
Germany 1946
Greenland 1945
Hungary 1949
Iceland 1950
Ireland 1946 and 1951
Japan 1947 and 1950
Liechtenstein 1950
Luxembourg 1947
Madagascar 1951 (Europeans)
Morocco (Southern Zone) 1951 (Europeans)
Netherlands 1947
New Zealand 1945 (Europeans)
New Zealand 1951 (European and total)
Northern Ireland 1951
Northern Rhodesia 1951 (Europeans)
Norway 1946 and 1950
Papua 1954 (Europeans)
Ryukyu Islands 1950
Saar 1946 and 1951
Scotland 1951
Southern Rhodesia 1946 and 1951 (Europeans)

[8] In this index, differences were scored from expected values of ratios between numbers of either sex in the same age group, and numbers of the same sex in adjoining age groups. In compounding the score, allowance had to be made for certain factors such as the effects of past fluctuations in birth rates, of heavy war casualties, and of the smallness of the population itself. A detailed description of the index, with results of its application to the data presented in the *Demographic Yearbooks* of 1949-1950 and 1951, is furnished in *Population Bulletin* No. 2 (United Nations, Department of Social Affairs, document ST/SAO/Ser.N/2, New York, October 1952, pp. 59-79).The scores obtained from statistics presented in the 1952 *Demographic Yearbook* are presented in that issue, and the index has also been briefly explained in that issue, as well as those of 1953 and 1954.

Nicaragua 1950
Portuguese Guinea 1950 (non-indigenous)
Turkey 1945 and 1950

The scores were also computed separately for each sex. It is commonly held that age statements for males are more accurate than those for females, but this is not invariably the case. Thus, of the 51 sex-age distributions for which a score of 105 or higher was obtained, the score for females exceeded that for males in 45 instances, but was exceeded by that for males in 6 instances. The latter group, in which female age statements are subject to less digit preference than those of males, comprises Barbados, New Guinea, New Zealand 1951 (Maoris), Portuguese Guinea, and Haiti.

In interpreting Whipple's Index, one should bear in mind that it measures the effects of preferences for age returns ending in 5 and 0 only. It can, however, be assumed that such digit preference is usually connected with other sources of inaccuracy in the age statements. With this proviso, the index can be accepted as a fair measure of the general accuracy of age statements.

Reliability of estimates

The reliability of a population estimate depends on the nature and quality of the statistics employed in its construction and the method by which these statistics are combined. An estimate is reliable if the probability of a relatively large error is slight or if errors in a given probability range are relatively small. A measure of reliability, defined in such terms, can actually be calculated, provided there is a quantitative appraisal of possible errors in each of the component factors of the estimate. For population statistics, such quantitative appraisals have been obtained systematically in relatively few countries. Accordingly, only rough assessments of reliability can be made in most cases, based on a consideration of the methods by which the current population estimates are obtained.

Evaluation of current estimates of total population

As a rough indication of the presumable degree of reliability in current estimates of total population, a code describing the manner of their construction was introduced experimentally in Table 1 of the 1949-50 issue of the *Yearbook*. With increased experience and knowledge, it became evident that the slight modifications introduced each year subsequent to 1952 were not adequate. By 1958, a more far-reaching modification seemed both feasible and necessary for two reasons: (1) it had become practicable to separate more clearly the logical elements which affected the reliability of each estimate, and (2) it was considered desirable to give more weight to the effect of the time which had elapsed between the date of the last basic population measurement (e.g., the last census) and the date of the current estimate.

In constructing the new code, five elements have been recognized as affecting the reliability of a current population estimate: (1) the nature of the base measurement of the population, (2) the probable error in that base measurement, (3) the time elapsed since the last measurement, (4) the method of time adjustment by which the base figure was brought up to date, and (5) the quality of the method of time adjustment. However, since very few comparable indications of the probable error in the base measurement have been secured so far, only elements (1), (3), (4) and (5) can be systematically considered. Hence, the revised code is composed of four parts, namely the nature of the base data, their recency, the nature of the time adjustment, and its quality. The symbols of the code are listed below for reference, followed by more detailed explanations.

Part I. Nature of base data (capital letter)

- **A** Complete census of individuals.
- **B** Sample census or survey.
- **C** Partial census or partial registration of individuals.
- **D** Conjecture.
- **..** Nature of base data not determined.

Part II. Recency of base data (subscript numeral following capital letter)

Numeral indicates time elapsed (in years) since establishment of base figure.

Part III. Method of time adjustment (lower-case letter)

- **a** Adjustment by continuous population register.
- **b** Adjustment based on calculated balance of births, deaths and migration.
- **c** Adjustment by assumed rate of increase.
- **d** No adjustment; base figure held constant at least two consecutive years.
- **x** Adjustment derived from regional population estimates.
- **..** Method of adjustment not determined.

Part IV. Quality of adjustment for types a and b (numeral following letter a or b)

- **1** Population balance adequately accounted for.
- **2** Adequacy of accounting for population balance not determined.
- **3** Population balance not adequately accounted for.

Quality of adjustment for type c (numeral following letter c)

- **1** Two or more censuses taken at decennial intervals or less.
- **2** Two or more censuses taken, but latest interval exceeds a decennium.
- **3** One or no census taken.

Part I, represented by capital letters, **A, B, C, D** or two dots (..), indicates the nature of the base data from which the current estimate has been derived.

A: The letter **A** applies when the original census of individuals was performed in a manner designed to secure separately data for each individual in the area.[11] Whether performed through self-enumeration (householder method) or the canvasser method, such enumerations are regarded as censuses proper; a registration of persons reporting at some central place can have the same effect, as can a house-listing or a census of housing when it secures separate information on each individual. For the present purpose, category **A** is limited to base figures of which at least 50 per cent were gathered by these means.

B: The symbol **B** applies when the base figure was an estimate based on a sample census or survey, the sampling units having been selected in such fashion as to be representative of the majority (over 50 per cent) of the population of the area. The accuracy of population totals established on the basis of sample surveys varies considerably but can, under certain conditions, approximate that of the 100 per cent enumeration.

C: The code **C** applies when the base figure has been secured under conditions other than those described in categories **A** and **B**. This category includes estimates based on censuses covering less than 50 per cent of the population or on those conducted over an extended period of time (more than 12 months); estimates based on counts of selected groups of individuals, such as those enumerated in agricultural, school or other censuses, and those entered on special registers as, for example, tax registers, voters' registers or rationing registers. Estimates made from counts of dwellings (such as huts or tents) which did not list the inhabitants separately, are considered to fall in this category, as are aggregations of local administrative reports on persons living in an area. In these estimates, the error in the total population figure is compounded of errors in the partial count or counts and errors in the coefficients or other adjustment factors used in arriving at a total. It can be presumed that the result is usually less accurate than that of a census or systematic sample survey of population.

D: The letter **D** applies where a population figure is arrived at by procedures other than those set forth in **A-C** above. Such procedures include the conversion of inhabited land area or the returns of the salt tax to population by application of a coefficient assumed to represent the ratio of population to the units of measurement. Estimates of this type are subject to wide margins of possible error.

Unknown: Two dots (..) are used where the nature of the base data has not been ascertained. In these cases, no attempt is made to classify the other elements of the code, except when it refers to an unofficial estimate, the time adjustment of which was derived from regional estimates (**x**).

Part II of the code consists of a numerical subscript indicating the number of years which have elapsed since base data were last secured. Thus, if a census was taken at any time in the year 1950, the nearest number of years to mid-year 1959—the date of current estimates presented in this issue—is nine, and the fact is indicated by the numeral 9 in subscript position following the capital letter of the code. Use of the numeral 0 has been extended to indicate not only base data obtained in 1959, but also those secured in 1960 if the 1959 estimate has been revised accordingly or been found in no need of revision. It is obvious that the more time that has passed since the population was last measured, the more the error likely to have accumulated in the current estimate owing to imperfections in the method of time adjustment.

Part III of the code, symbolized by lower-case roman letters, refers to the method of carrying a base figure forward to the current date. Letters **a, b, c,** and **d** classify official estimates for which the method of time adjustment is known; the letter **x** qualifies unofficial estimates made by the United Nations. When the method of time adjustment has not been ascertained, two dots (..) are shown.

a: The letter **a** indicates that the current estimate has been obtained directly from a continuous population register, i.e., from a complete register of in-

[11] See *Handbook of Population Census Methods,* Vol. I, *op. cit.,* p. 4.

dividuals or households from which a balance can be struck at convenient time intervals, usually the end of the calendar year. The essence of a population register is the assembling of vital records for each individual living in an area at a selected time, the addition of records resulting from birth or arrival and the withdrawal of records on death or departure. Current population estimates obtained by this method are sometimes of the highest order of accuracy, especially where the registers are systematically checked against population-census schedules to eliminate such erroneous entries as may have accumulated. Hence, though current estimates are obtained directly from the register, the nature and recency of independent base measurements of the population remain relevant.

b: The method of time adjustment is coded **b** when the recorded number of births and deaths (i.e., the natural increase), and possibly also recorded arrivals and departures (i.e., the migratory balance), have been utilized to bring a base population figure up to date. Provided that the records are complete and accurate, this calculation method can result in reliable population estimates, since every component of population change will have been taken into account. Countries differ, however, in the magnitude of their migratory balances relative to the size of the population. Hence, accounting for migratory movements may be an important element for population estimates in some countries while in others, failure to account for net migration introduces only slight or negligible errors in the resulting population estimates.

c: Where population change over time is estimated rather than calculated from recorded change in the components, the method of time adjustment is coded **c**. Any estimate of population change depends on an assumption, whether it is based on a rate of change observed in the same population during some past time period or on observations made in some other population, and regardless of the mathematical formula which is being applied. There is no *a priori* reason for regarding one type of assumption as more reliable than another. It can be presumed that the assumption selected for officially estimating population, based on available knowledge in each instance, will ordinarily be one which appears somewhat reasonable or plausible. But the element of judgment involved cannot be objectively classified. Population estimates carried forward with a judiciously selected assumption of the mode of increase can happen to be as accurate as those brought up to date with recorded balances of natural and migratory increase, at least where the latter records are noticeably deficient. But, in view of the inevitable arbitrariness in the selection of a seemingly suitable assumption, a time adjustment of type **c** can never be as reliable as one of type **b**, at least when the records of population change are relatively accurate.

d: Where a base population figure has been held constant for two or more consecutive years, it can be presumed that no attempt has been made to bring it up to date, and the code **d** is applied. Except in the rare instance of a nearly stationary population, estimates of this type are considered less reliable than those where at least a plausible rate of population change has been assumed.

x: When official estimates are not available, unofficial population estimates for the current year are prepared in the United Nations Secretariat. In these instances, the time adjustment results from a method in which the rate of population growth in a particular area is related to the population growth of a larger region of which the area forms part.[12] Since no detailed study of the particular conditions in the area is made, this time adjustment, coded **x**, may often be less realistic than an assumed rate used by authorities within the area (coded **c**). On the other hand, the results are probably more reliable than those estimates (coded **d**) in which no attempt at time adjustment is made.

Unknown: Where the method of time adjustment has not been ascertained, but the nature of the basic population measurement is known, the fact is indicated by two dots (..) following Parts I and II of the code. In some instances, where a new base measurement has been secured quite recently, it is to be presumed that the method of time adjustment has not yet been determined but will become evident in subsequent years.

Part IV of the code consists of a numeral subscript intended to qualify further the method of time adjustment, except where this is undetermined (code .), where it was carried out unofficially (method **x**) or not carried out at all (**d**). One set of qualifications is relevant to continuous population registers (coded **a**) and to calculated balances of natural increase with or without a migratory balance (code **b**); different considerations apply where estimates are brought forward by means of assumed rates of growth (coded **c**).

Qualification of **a** *or* **b**, *i.e., population registers or natural-increase method*

1: The subscript 1 means that births, deaths, immigration and emigration have been adequately accounted for. In other words, even an extreme combination of possible errors in the four components of the balance is unlikely to exceed 5 persons per 1,000 population per year of the period over which the adjustment extends.

2: The subscript 2 is used when the accounting adequacy is unknown.

3: The subscript 3 is used when independent tests or calculations show that an error of 5 persons per 1,000 population per year of the period in question may have been exceeded.

Qualification of **c**, *the assumed-rate-of-growth method*

In the case of time adjustments by assumed rates of growth, the basis for a judicious selection of a suitable assumption depends largely on the frequency and peri-

[12] The method is described in: United Nations. Population Branch. *The Future Growth of World Population.* Document ST/SOA/SER.A/28, 1958, pp. 18-19. (Sales No. 58.XIII.2)

odicity of previous censuses. The adjustment is likely to be more dependable where censuses have been taken within intervals not exceeding ten years than where this has not been the case.

1: The symbol 1 is used where the current estimate has been preceded by at least two censuses within decennial intervals. Censuses intended to be decennial are occasionally delayed by a year or two, and allowance is made in the code for this possibility, where pertinent.

2: The symbol 2 is used where there have been two or more previous censuses but more than ten years have elapsed either between the dates of the last two censuses or between the last census and the current date.

3: The symbol 3 is used where only one or no census has been taken. In this instance, it can be presumed that the assumption of a rate of population increase rests on rather uncertain evidence. Base data secured by methods other than those of a census ordinarily lack the comparability needed for calculation of a reliable rate of increase.

Evaluation of time series

The code described above has been designed primarily to evaluate the presumable reliability of estimates of total population for a current date (mid-year 1959, in this instance); it appears in Table 1 only. However, since there is usually a certain consistency in the manner in which countries prepare their population estimates from year to year, the code has some relevance also to the estimates for other recent years. In the case of a time series of population estimates, however, not only is the reliability of a particular estimate a matter of interest, but the accuracy with which annual population changes are reflected is also relevant. Hence, in a statistical appraisal of time series, more attention needs to be given to the method of time adjustment and to its qualifications.

As a first step, the estimates presented in Table 4 were classified according to whether the latest estimate was based on a complete census of population **(A)**, on a sample census **(B)**, on a partial or limited-coverage census **(C)** or on a conjecture **(D)**. Those having their origin in a census of population, irrespective of whether it was 100 per cent or a sample enumeration, were considered more reliable than those based on the results of a partial census or on a conjecture.

Estimates based on a census were next classified by the method of time adjustment. Good time adjustment comprised updating by a population register or the balancing-equation method (codes **a** and **b**), provided the components of the adjusting factor were adequately accounted for. Adequate accounting was limited to $\mathbf{b}_1$'s and those $\mathbf{b}_2$'s where it was known that vital statistics were complete or that the territory involved was a small island in which it was presumed the chance of error was small. In addition, a very few (5) estimates based on a current count which was not a population census or survey were considered "good" since they related to small populations.

The exercise described above classifies series according to the reliability of the most recent estimate—that is, the estimate for 1959 or 1958. On the assumption that this evaluation covered the years immediately prior to 1958 or 1959, it might be assumed that an evaluation was thus available for roughly 1955-1959.

To ascertain whether the evaluation for these past 5 years was in accord with that for an earlier part of the series, recourse was made to the evaluation for 1949-1951 estimates, published in the 1952 *Demographic Yearbook*. According to the text of that issue (page 21), combinations of R, A and B, with 0, 1 or 2 of the code then used indicated estimates of a relatively high level of reliability. Analysis of the current estimates considered "good" in terms of the 1952 code showed that the current evaluation overstated to some extent the number of good series. This means that the series are not homogeneous and in a number of cases, some evaluated as now "good" were "poor" as late as 1952.[13] It may be noted, however, that those now coded as less reliable were also considered unreliable in 1952. It is evident, therefore, that the reliable series are of varying degrees of reliability, that their number errs on the side of overstatement and that in earlier years, many were considerably less reliable than the classification implies.

The application of all these factors resulted in the distinction of estimates of questionable reliability from others. This distinction is made evident in Tables 4 and 5 by the use of italic type for those of questionable reliability, as indicated by their method of construction. This categorizing does not in any way evaluate the accuracy of the information on characteristics such as age; such efforts as have been made in this direction are set forth on page 18.

It must be emphasized that this classification is, in a real sense, experimental; it is hoped that with experience and information gained in the interim, the distinction may be sharpened and refined in the succeeding issues of the *Demographic Yearbook*. The limitations of printing for visual indications of this kind must be borne in mind, however, and also the desirability in any case of keeping the number of evaluation categories to a minimum so that their meaning may be immediately grasped by the user.

[13] These are Albania, American Samoa, Argentina, Bahamas, British Guiana, Bulgaria, Cayman, Chile, China (Taiwan), Christmas Island, Cocos (Keeling) Islands, Cook Islands, Costa Rica, Gibraltar, Greenland, Guatemala, Hungary, Jamaica, Malta and Gozo, Mauritius, Nauru, Niue, Norfolk Island, St. Helena, West Berlin, Western Samoa, Singapore, and Tonga.

VITAL STATISTICS

For purposes of the *Demographic Yearbook*, vital statistics have been defined as statistics of live birth, death, foetal death, marriage and divorce. This is in accord with Principle 201 of the United Nations *Principles for a Vital Statistics System*[14] which defines the field of vital statistics

[14] United Nations. Statistical Office. *Principles for a Vital Statistics System; Recommendations for the Improvement and Standardization of Vital Statistics.* Document ST/STAT/SER.M/19, 26 August 1953, p. 6. (Sales No. 53.XVII.8)

as encompassing these, as well as statistics of adoptions, legitimations, recognitions, annulments and legal separations.

The factors which affect international comparability of vital statistics are much the same as those which must be considered in evaluating the variation in population statistics. Differences in geographic and ethnic coverage of the data; variation in the reliability of the statistics, i.e., in completeness of registration; diverse tabulation procedures; differences in statistical definitions of vital events—all these may influence comparability.

Standards for improvement of vital statistics in respect of these factors and others have been set forth in the *Principles for a Vital Statistics System.*[15] The utility of these international recommendations for improvement and standardization is further developed, and their application to national situations assisted, by a *Handbook of Vital Statistics Methods.*[16] The *Handbook* also discusses in detail the possible sources of error in vital statistics, which will be outlined below, and reference should be made to it for further details.

SOURCES OF VARIATION

Fragmentary coverage — geographic and ethnic

Despite the fact that the obtaining of statistics of live births, deaths, foetal deaths, marriages and divorces has been given priority in the United Nations recommendations, the availability of such statistics varies widely.[17] This is due in part to lack of uniformity and universality in national legislation. In some areas, registration is compulsory for only births and deaths; in others, it is compulsory for only a part of the population (e.g., European, civilized or non-indigenous population). In still other countries, such as India and Pakistan, there is no national provision for compulsory registration, but only municipal or state ordinances which do not cover the entire geographic area. Still other countries (e.g., Indonesia) have developed registration areas which comprise only a part of the country, the remainder being excluded for reasons of inaccessibility or because of economic and cultural considerations that make regular registration a practical impossibility.

Examination of the tables will show that the vital-statistics coverage for Africa is particularly spotty, being confined largely to data for the European population with, as a rule, only a few partial statistics and estimates for the indigenous segments. Similarly, the coverage is uneven and the statistics incomplete and unreliable for much of Asia and parts of Latin America. The fragmentary nature of available statistics is one important limitation to international comparability.

Reliability

In addition to the variations which arise because of lack of national provision for registration, there are also differences in the effectiveness with which national laws operate in the various countries. The manner in which the law is implemented and the degree to which the public complies with the legislation determine the reliability of the vital statistics obtained from the civil registers.

Evaluation of current statistics

Deficiencies in vital statistics are often fairly obvious, especially when these statistics are expressed as rates. However, evaluation of quality based only on examination of the tabulated series can be very misleading. To obtain more basic information on this point, the United Nations in 1956 made a special inquiry as to the national estimates of completeness and accuracy of data, using the *Demographic Yearbook* annual questionnaire to carry out the survey. This inventory has been systematically extended and refined as new information on reliability became available.

On the basis of information accumulated from direct correspondence or from relevant official publications, it has been possible to classify national vital statistics into three broad categories, as follows:

- **C** Those stated to be relatively complete, i.e., representing at least 90% coverage of the events occurring each year.
- **U** Those stated to be unreliable, that is, less than 90% coverage.
- **...** Those concerning which no specific information is available.

The way in which the classification was made did not permit the application of uniform, objective criteria with respect to reliability. In many cases, the basis for the country's own evaluation of the data was not given. Nevertheless, it was felt that under the circumstances national statistical offices were in the best position to judge the quality of their data and that even the very broad categories C and U that could be established would be useful in furnishing some indication of the validity of the statistics presented in this *Yearbook.*

The results of this classification (C, U or ...) appear in the first column of the trend tables, Nos. 13, 15, 16, 17, 20 and 22, which show total frequencies and rates for live births, deaths, infant deaths, foetal deaths, marriages and divorces. Here also, in the form of footnotes, will be found the exact values—when they exist—upon which the U code was based.

In addition to showing the quality code in each trend table, data coded U and those for which reliability is unknown (...) are typeset in italics to distinguish them quickly from more reliable figures.

Evaluation of time series

Evaluation of the quality of a time series of vital statistics is a more difficult matter. Since estimates of current reliability are based on conjecture in large part, objective evaluations for prior years tend to be non-existent. In the absence of earlier measures of reliability, therefore, it was decided to assume that the quality of the entire series was the same as that for the current data; hence, the time trends are set in italics if the code for the current year is unreliable (U) or unknown (...).

It is recognized that this method is not entirely valid, because it is known that in earlier years, many of the

[15] *Ibid.*

[16] United Nations. Statistical Office. *Handbook of Vital Statistics Methods.* Document ST/STAT/SER.F/7, April 1955, 258 pp. (Sales No. 55.XVII.1)

[17] For a regional analysis of the geographic and ethnic coverage of birth and death statistics, see the 1956 *Demographic Yearbook,* Chapter I, Table J, p. 15.

series were considerably less reliable than the code implies. But, since it was felt that a more obvious means was desirable for identifying data whose reliability was questionable and since the effect is to overstate rather than understate reliability, the current code has been used as a basis of classification—despite its deficiencies. Likewise, it has seemed justifiable to assume that data for which the degree of completeness was still unknown might be considered as unreliable and set in italics, together with those coded U.

Strictly speaking, the reliability code relates specifically to the vital-statistics frequencies and, therefore, only indirectly to rates which depend also on population figures. However, it should be pointed out that the two components of the rate are not unrelated particularly where vital statistics have been utilized in the preparation of the population estimates. Therefore, rates based on unreliable statistics are shown as unreliable even though their magnitude may appear credible for one reason or another. A fuller evaluation of current rates may be made by considering also the implications of the evaluation of population estimates presented in Table 1 and elsewhere.

Tabulation Procedures

Present-in-area population

In accordance with part (*c*) of Principle 409,[18] vital statistics shown in this *Yearbook* relate to the *de facto* or present-in-area population. Thus, unless otherwise noted, vital statistics include events which occurred within the present boundaries of the geographic areas shown and among all segments of population therein. Footnotes are used only to show deviations from this concept, except in the case of deaths among the armed forces; for clarity, the disposition of these deaths is explained in so far as possible, irrespective of whether it constitutes a deviation from the standard concept.

The need for distinguishing for national purposes between statistics for areas or peoples where registration is moderately complete and those in which it is incomplete has been recognized in Principles 402 and 403.[19] In line with these Principles, statistics for some countries regularly exclude data for a segment of the population in which registration, though compulsory, is not even moderately complete, and for which therefore the statistics are very unreliable. Countries which follow this procedure include Panama and Venezuela, where vital statistics exclude data for the tribal Indian population; Peru, whose jungle population is excluded; British Guiana, Surinam, Syria and Australia, where statistics for nomadic aborigines are not included. These cases, as well as others where the geographic area or population covered by the statistics is less than the entire country, are noted in the tables.

By date of occurrence versus date of registration

In so far as possible, the vital statistics presented in the *Yearbook* refer to events which occurred during the specified year, rather than to events which were registered during the period. This is in accord with the United Nation's *Principle*[20] on this subject.

Symbol: Reference to the tables will reveal, however, that despite this international recommendation, a considerable number of countries tabulate their statistics not by date of occurrence but by date of registration; moreover, very few of these have analysed the results with a view to proving their adequacy as measures of natality or mortality. Because such statistics can be very misleading, the countries known to tabulate vital statistics by date of registration are identified in the tables by a dagger symbol (†). The absence of the dagger, therefore, indicates date-of-occurrence tabulation but, since complete information is not available, this assumption may overstate the occurrence group to some extent.

Effect on comparability: If registration is prompt, the difference between statistics tabulated by the two methods might be negligible. The only factor limiting comparability in such cases is the length of the statutory time period allowed for current registration which, incidentally, differs markedly from country to country.

However, if delayed registration exists to any substantial degree, vital statistics by date of registration will not produce internationally comparable data. Under the best circumstances, statistics of registrations will include primarily events which occurred in the immediately preceding year; in countries with less well-developed systems, they will include many of longer durations. Examination of evidence available for the United States, Costa Rica, Chile and the Dominican Republic reveals that delays of up to 20-25 years are not uncommon for birth registration, though the majority are recorded between 2 and 4 years of birth. As registration completeness and promptness improve, date-of-registration tabulations will approximate more closely the true frequencies for the year in question but, until this time is reached, the statistics of registration will not be internationally comparable.

It should also be mentioned that lack of international comparability is not the only problem introduced by date-of-registration tabulation. Even within the same country, comparability over time may be lost by the practice. If the number of events registered from year to year fluctuates to any extent (due to *ad hoc* incentives to stimulate registration or to the sudden need for proof of birth or death to meet certain requirements), vital statistics tabulated by date of registration cannot provide a measure of the level of natality or mortality; nor can they provide an indication of the trend. All they can give is an indication of the fluctuations in the need for a birth, death or marriage certificate. If, on the other hand, registration completeness is not sporadic but steady from year to year, and—in fact—improving, the apparent rise in the birth and death rates may be mistaken for evidence of changes in the incidence of births and deaths. In both cases, statistics of birth and death registrations are of very limited use for either national or international studies.

Statistical definition of events

Another source of variation—though a much less important one—lies in the statistical definition of vital

[18] "Tabulation of data for the national territory should relate in general to data on events occurring within the national boundaries, although under certain circumstances, as for example during war years, provision may need to be made for including in the national tabulations data for deaths among the armed forces stationed outside the national boundaries."

[19] *Principles for a Vital Statistics System, op. cit.*, p. 17.

[20] *Ibid.*, p. 18.

events. It is important, for example, to establish a uniform and definite criterion differentiating statistically between foetal deaths and live births. This has special bearing on the comparability of live-birth, total death, infant-death and foetal-death statistics, an evaluation of which may be found in the *Handbook of Vital Statistics Methods,* Chapter IV. Internationally recommended definitions may also be found in the *Handbook.*

Lack of comparability due to different statistical definitions is found also in statistics of marriage and divorce. Even though marriage and divorce are legal rather than biological events and thus presumably less subject to variation in definition, conceptual differences between countries do affect the statistics. Further details have been given in the 1958 *Demographic Yearbook,* which featured marriage and divorce statistics.

LIVE BIRTH STATISTICS

Because this issue of the *Yearbook* is devoted chiefly to population trends, the subject coverage for birth statistics has been restricted to basic data for which continuity is required each year, namely, to time trends and births by age of mother. These will be found in Tables 13 and 14, respectively.

For purposes of these tables, live birth has been defined in accordance with the international definition set forth in the *Principles for a Vital Statistics System*[21] and in the 1959 *Demographic Yearbook.* The variations in the data are discussed briefly in connexion with Tables 13 and 14; for general limitations of birth statistics, see the 1959 issue of the *Demographic Yearbook,* where natality statistics were featured.

FOETAL DEATH STATISTICS

Statistics of late foetal deaths are set forth in one table only in this issue, namely, Table 17, which shows the trend of frequencies and ratios since 1950.

The definition of foetal death on which the statistics are based is that recommended in the *Principles for a Vital Statistics System*[22] and in the 1959 *Demographic Yearbook* which featured natality statistics. The effects of variations in the definition, as well as other sources of non-comparability, are discussed briefly in connexion with Table 17; for further details, see the 1959 *Demographic Yearbook.*

DEATH STATISTICS

Data on mortality (exclusive of foetal death) are presented in Tables 15, 16, 18 and 19. The trends of total deaths and infant deaths, with corresponding crude rates, are set forth in Tables 15 and 16. Deaths by age and sex and deaths by cause are made available in Tables 18 and 19.

The definition of "death" on which statistics are based is that recommended in the *Principles for a Vital Statistics System.*[23] The effect of variations in definition, as well as other sources of non-comparability, is discussed briefly in connexion with the tables; for further details, see the 1957 *Demographic Yearbook,* in which the feature subject was mortality statistics.

MARRIAGE STATISTICS

The trend of marriages and their distribution by age of bride and groom constitute the coverage in this issue.

In accordance with the recommendation made in the *Principles for a Vital Statistics System,*[24] the statistics refer, unless otherwise noted, to formal, legal marriages. The effects of variations in definition, as well as other sources of non-comparability, are discussed briefly in connexion with Tables 20 and 21; for a more detailed treatment of these factors, see pp. 17-18 of the 1958 *Demographic Yearbook,* where this subject was featured.

DIVORCE STATISTICS

Time series of statistics on dissolution of marriage by divorce have been set forth in Table 22. Unless otherwise specified, the definition used in compiling these statistics was that recommended in the *Principles for a Vital Statistics System.*[25]

The effects of variations in definition, as well as other sources of non-comparability, are discussed briefly in connexion with Table 22; for a more detailed treatment of these factors, see pp. 18-19 of the 1958 *Demographic Yearbook,* where this subject was featured.

LIFE TABLES

Life tables are based on observed mortality conditions for a selected time period, but they permit a more detailed analysis of the implications and prospects inherent in those conditions than do conventional central death rates.

Though first developed for actuarial purposes, the life table has many applications in the demographic field. Among these are (1) preparation of population projections by age and sex, (2) analysis of effects of mortality on the age and sex composition of a population, (3) comparisons of summarizing measures of mortality, as the life-table death rate (the reciprocal of the expectation of life at birth), expectation of life at various ages, etc., (4) computation of net reproduction rates and (5) appraisal of the accuracy of census enumerations and vital-registration data. In addition, life-table techniques have been applied to the analysis of other types of demographic data, for example, in the computation of probabilities of marriage specific for age and sex, on the basis of census data classified by marital status.

Three principal functions are normally given: (1) the probability of dying within one year or within a specified age interval for persons of exact ages specified (q_x); (2) the survivors at the beginning of each age interval out of a generation of 100,000 (l_x); and (3) the mean expectation of life or the average future lifetime for persons at exact ages specified ($\mathring{e}_x$). In this issue, only the last is included. For a discussion of this and other values and of life-table construction in general, see the 1957 *Demographic Yearbook,* pp. 40-41.

[25] *Ibid.,* Principle 202.

Table 1

Table 1 presents the results of the latest census of population distributed by sex, the 1953 and 1959 estimates of population in thousands, the type of the 1959 estimate (see p. 19), the average annual per cent rate of population growth (or decrease) between 1953 and 1959 and the current area and population density for each country and territory of the world.

The countries and territories are arranged by continents, with those in Africa appearing first, followed by those in North America, South America, Asia, Europe and Oceania; the USSR is listed last, since it is partly in Europe and partly in Asia. Within each continent, sovereign States are shown first, in English alphabetic order, followed by non-sovereign territories set forth under the name of their respective administering authority and also distinguished as to their administrative status, i.e., dependencies, trust territories, condominiums, military government and so forth.

In so far as possible, the classification reflects the situation as of 31 December 1960. It, together with the extensive footnotes which describe the boundaries of the areas in a detail not found elsewhere in the *Yearbook,* makes this the reference table of the volume in respect of sovereignty and territorial composition. It is also the reference for nomenclature in English and French, incorporating as it does the most recent official forms of country names.[26]

Unless otherwise indicated, both census and estimates relate to the modified present-in-area population as described on p. 17.

In so far as possible the figures presented in the census columns of Table 1 are the results of censuses[27] or sample surveys designed to obtain a count of individuals. To be included, these censuses or surveys need not be national in scope; they may cover only part of the territory or only one segment of the population, and they may be more or less complete in terms of underenumeration. Estimates of excluded groups and underenumeration are shown in footnotes when known.

The inclusion in Table 1 of all censuses provides an inventory of recent census-taking activities throughout the world. It makes possible the identification of countries which have never carried out any type of census, those which have taken a census of limited scope in terms of persons enumerated and those which have taken a true national census. The practice of including sample survey results provides the same information for this increasingly popular method of estimating population, and it also makes available base population figures for areas which either have had no previous census or none in recent years.

Unless otherwise specified, estimates refer to the midyear, i.e., to the population at 1 July of the relevant year. However, in the absence of a midyear estimate, a mean of two successive end-year (31 December) estimates may have been used; no distinction is made between these two types of midyear estimates, on the assumption that the difference involved is negligible.

When an official midyear estimate was not available for a year in which a census had been taken, the results of the enumeration are shown in the estimates column, but in bold-face type to distinguish them from the midyear estimate. In a few cases, the 1959 estimate of population, though official, is observed to be out of line with the results of the 1960 census shown in an adjacent column. Since the census result may be noted as provisional and subject to revision, and since the estimate has not yet been officially withdrawn, a footnote is appended to the latter to draw attention to its unrevised and possibly erroneous nature.

In one or two cases where neither an enumerated population nor an official estimate was available, unofficial estimates have been shown for 1953 and/or 1959 in order to provide an idea of the current size of the population in every part of the world. Such unofficial estimates are identified in the table by the symbol "x" or a footnote specifying their source.

The type-of-estimate code, the construction of which was described in detail on p. 19, is included in this table. Together with information on underenumeration, the code furnishes the basis for fairly precise evaluation of the 1959 estimates of population—wherever they appear—and it may also be assumed to apply less precisely, perhaps, to the estimate for 1953. On the basis of this assumption and other available information as described on p. 22, estimates for both years have been classified as reliable or of questionable reliability, and those believed to be of questionable reliability are set in italics rather than in roman type.

The code has been omitted in two instances, namely where a figure for the current date (1959) was not available and where the figure for an area was a composite, resulting from addition or subtraction of estimates for component areas derived by varying methods. Where the code has not been applied, the fact is indicated by one dot (.). It should be emphasized that although codes are shown for all estimates other than the above, some small populations are estimated by methods not easily classifiable by the present scheme, and some small populations are disproportionately affected by the frequent arrival and departure of migrants, visitors, etc., with consequent relatively large variations between *de facto* and *de jure* population, as variously defined. The classification of estimates for some of the small populations, therefore, is quite inadequate as an assessment of their presumable reliability.

The area figures, given in square kilometres, relate to the total area of the specified geographic units, including inland water as well as such uninhabited or uninhabitable stretches of land as may lie within the boundaries. Wholly uninhabited areas, such as the polar regions and a few small islands, are usually excluded from the statistics. Area estimates are official unless marked with the symbol "x". Areas reported in square miles have been converted to square kilometers, using the factor 2.589998.

Coverage: Table 1 includes data for 270 separate geographic units, that is, all countries, territories and component parts of collective territories which have at least 50 inhabitants. The stub of this table is, therefore, the most comprehensive of any in the *Yearbook.*

---

[26] See p. 13.

[27] For a definition of a census and methods of enumerating, see *Handbook of Population Census Methods,* Vol. I, *op. cit.,* pp. 4, 89, 98.

Component parts of territories, such as parts of federations or island groups, are shown when data are available separately. Where it is not feasible or convenient to show data for each component, footnotes explain the geographic composition of the territory.

Rate computation:

Rate of increase: The average annual per cent rate of change in population size between 1953 and 1959 has been computed from data in the table, using the following formula:

$$P_1 = P_o\ (1 + r)^t \times 100$$

where P_o is the population in 1953,
P_1 is the population in 1959,
t is 6 (years between 1953 and 1959), and
r is the annual rate of change.

Although population estimates in Table 1 appear only in thousands, figures in unit digits were used whenever possible for the computation of rates. In some cases, however, the only estimates available were those rounded to the nearest thousand, hundred thousand or million; when the number of significant digits was so few as to cause the possible error of the computation to reach ± 0.5, the resultant rate is so footnoted. Rates were computed to two decimals and rounded to one for publication.

No rates were computed for populations of less than 50,000 because chance variation alone would in these cases amount to at least 0.5 per cent. A footnote identifies these in the column. Likewise, no rate was computed where the 1953 and 1959 estimates in thousands are identical even though the figures in units might differ slightly. In these cases, a symbol of one dot (.) was used to signify that a rate was not applicable under the circumstances.

Density: Unless otherwise indicated, density is the number of persons in the 1959 total population per square kilometre of total area. This index has been computed for every geographic unit for which the two components were available. Where two area figures are given —for example, one for administrative boundaries and one for habitable land—the habitable area is the base for the density computation.

Limitations: The population data given in this table are subject to the limitations of population statistics in general, namely variations in definitions and tabulation methods, deficiencies in completeness of the basic count and differences in the method of constructing estimates—all of which were discussed above on p. 15. To assist in the assessing of comparability, the degree of underenumeration in the population census has been given when known, and the reliability of the estimates may be ascertained by reference to the type-of-estimate code and to the type-face in which the figures are set. For guidance in interpreting the terms *de facto* and *de jure* in relation to data in this table, reference may be made to Table A, p. 16.

Per cent rates of population growth are subject to all the qualifications of the basic population figures mentioned above. In many cases, they admittedly reflect simply the rate calculated or assumed in constructing the estimates themselves in the absence of adequate measures of natural and migratory increase.[28] Moreover, for small populations an error up to ± 0.5 may be introduced by chance alone. The 6-year period is also of short duration for long-range conclusions. Nevertheless, being able to be calculated for every area, these rates do provide a useful index which—with proper cautions—can be useful also in evaluating the accuracy of vital and migration statistics.

Comparability of area figures is limited by all factors set forth on p. 15 above. It should be emphasized that density values are very rough indices, inasmuch as they do not take account of the dispersion or concentration of population within areas.

Table 2

This table presents comparable estimates of world population by continental divisions and regions for each tenth year, 1920 to 1950, and for 1959, together with the average annual per cent rate of population increase between 1950 and 1959, estimated birth and death rates for the period 1955-59, the 1959 area in square kilometres and the population density for that year.

The population estimates in this table were based on official figures shown in Table 1, but they include in addition an adjustment for under- or over-enumeration at the various censuses and for over-estimation, an allowance for categories of population not regularly included in the official figures and an estimate for those countries which have not yet provided official 1959 data. Because of these adjustments, regional and continental sub-totals do not necessarily coincide with those which would result from summing the component parts in Table 1. Moreover, estimates for other years might have been reconstructed to take account of newly acquired current information, resulting in data which differ from those shown in previous issues of the Yearbook. Hence, the regional and world estimates in the latest version of Table 2 are considered to supersede all previously published figures of this type. Because of rounding, the regional and world totals are not in all cases the sum of their parts.

Per cent rates of increase have been calculated by the method explained in connexion with Table 1, except that the time period (t) here relates to the period 1950-1959, rather than to 1953-1959.

The estimated average annual birth and death rates for the 5-year period 1955-59 have been derived from a study of the range of recorded rates in each country or territory in the region and such official estimates of natality and mortality as may have been obtained from sample surveys, analyses of consecutive census returns and the like. The method involves rank-ordering the registered or estimated birth rates and death rates observed in each region; subtracting the observed population rate of growth for the region from the lowest and the highest birth rate in the range and adding it to the lowest and highest death rate in the range, to produce two other possible birth and death rates consistent with the components; arranging the four potential birth and death rates in rank order, and by a process of averaging, arrive at one birth rate and one death rate which together most nearly and reasonably approximate the observed regional population growth rate. Continental rates are weighted averages of regional rates. Wide discrepancies between the population growth rate and the natural increase rate

[28] See 1956 *Demographic Yearbook*, p. 13.

obtained as described above were assumed to be due to migratory movements; these cases are noted in the tables.

The regional, continental and world area totals were obtained by summing the figures for individual geographic units shown in Table 1; they, therefore, include inland waters but exclude polar regions and a few uninhabited islands. In interpreting the population densities, note should be taken of the fact that most of the regions include large areas of land that are only barely habitable, and density values such as those shown make no allowance either for the uninhabitable land or for dispersion or concentration of population within these areas.

Coverage: The 14 regions designed to meet the needs of demographic statistics are sub-divisions of continents and are constituted of countries and territories as set forth and defined in Table 1. They have been delineated in terms of present *de facto* boundaries and all retrospective figures, having been adjusted for boundary changes, refer to constant areas. The composition of each region is as follows:

AFRICA

Northern Africa
- Algeria
- Ethiopia
- French Somaliland
- Ifni
- Libya
- Morocco
- Somalia
- Spanish Possessions in North Africa
- Spanish Sahara
- Sudan
- Tunisia

UNION OF SOVIET SOCIALIST REPUBLICS

Limitations: Being derived essentially from data in Table 1, the estimates of population and area in Table 2 are subject to all the basic limitations set forth in connexion with that table.

Likewise, the population-increase rates and density indices computed on these base data are also affected by the limitations of the original figures. However, it may be noted that in aggregating data for regional and continental totals, errors in the components may tend to compensate each other and the resulting aggregates may be somewhat more reliable than the quality of the individual components would imply.

Because of their purely estimated character, most of the birth and death rates shown should be considered only as working indices, and not as measures of the true level of natality or mortality. Even in the areas for which rates are estimated from recorded statistics, they are subject to all the limitations of those statistics, as set forth on p. 23.

Despite the fact that the method of estimation is the same as that used in constructing the average rates for 1951-55, 1952-56, 1953-57 and 1954-58 shown in the four previous issues of the *Demographic Yearbook,* rates for 1955-59 should not be considered comparable with those previously derived, nor should the set be considered a time series. Each series is based on the data available at the time of estimation, and much new information has been taken into account in constructing the estimates for 1955-59.

Table 3

This table, which was first shown in the 1958 *Demographic Yearbook,* is an attempt to bring together current rates of birth, death, marriage, divorce, infant mortality, fertility and natural increase, and expectation-of-life values for countries and territories where birth and death rates are considered reliable.

Recorded rates for the latest available year are shown and, where these have been evaluated in terms of completeness of registration, the additional measures are given in footnotes. Where recorded statistics are unreliable but a relatively accurate national estimate of the birth and death rate has been made, these have been included—suitably identified. The effects of this policy are evident particularly in Africa and Asia, where vital statistics are notably defective but where apparently reasonable estimates have been derived from demographic survey results. Constructed in this way, the table meets the need for a ready reference to current, more or less comparable rates. It must be emphasized, however, that special qualifications have had to be omitted for lack of space, and reference must be made to the corresponding trend tables for more precise information in terms of coverage, basis of tabulation and general limitations.

The reference date set forth in the table is that common to the birth and death rates; when the date for other rates differs from this, it is given in a footnote.

Coverage: Table 3 contains rates for 108 countries and territories. These are the areas considered to have a reliable birth and death rate, that is, those where registration of births and deaths is reported to be at least 90 per cent complete and those for which, in the absence of complete registration, a reliable estimate of the birth and death rate has been made.

Only national rates or those for the major ethnic group appear in Table 3; rates for cities, minor civil divisions or minor ethnic groups have not been included, inasmuch as the table's function is to provide rates which are presumed to be representative of the various indices for the country as a whole.

Rate computation: Crude annual birth, death, marriage and divorce rates derived from civil registers are the number of events reported for the calendar year cited, per 1,000 persons present in the same geographic area at the midpoint of the year in question. For estimated rates, the method (if known) is given in footnotes to the table.

Infant-mortality rates are the number of deaths occurred under one year of age, per 1,000 live births in the same period, no adjustment having been made for the non-correspondence of the numerator and denominator.

Fertility rates are the number of live births in the calendar year per 1,000 female population aged 10-49 years.

Natural-increase rates are the difference between the crude birth and death rates.

Limitations: Since most of the rates and all of the life expectancies are presented also in other tables in this or previous *Yearbooks,* reference should be made to the corresponding basic compilation and to the *Handbook of Vital Statistics Methods*[30] for details of limitations and qualifications.

In assessing comparability, special attention should be paid to the relative degrees of completeness as expressed in the quality code in each trend table and the footnotes appended thereto, and to the basis for the estimated rates. Variation in the basis of tabulation (i.e., date of occurrence *versus* date of registration) is another potential source of noncomparability which should be borne in mind in using the rates on an international basis. Finally, the noncorrespondence of the time reference might also need to be considered in comparing the various rates with each other and with those for other countries.

Table 4

Estimates of total population for each year 1920-1960 are presented in Table 4. All figures are given in thousands, those reported in units having been rounded in the Statistical Office, using the digit five (5) in the hundreds place as the criterion for upward adjustment.

Unless otherwise indicated, all estimates relate to the modified present-in-area population within present geographic boundaries. This type of population, and its comparability with the *de jure* estimates, has been discussed in detail on p. 17 and in the 1955 and 1956 *Demographic Yearbooks.* In Table 4, major differences which exist between the population shown and the standard modified *de facto* have been indicated in footnotes. Also, for emphasis and clarity—especially during war years—the disposition of certain major segments of population such as armed forces has been indicated in Table 4, even though this disposition does not constitute disagreement with the standard.

Estimates relate to the mid-point (1 July) of the specified calendar year. In cases where official estimates were available for 31 December only, the arithmetic mean of two consecutive end-of-year estimates was computed and presented in this table as the midyear estimate. In a few cases, official estimates regularly prepared for a date other than 1 July or 31 December are given in the table, accompanied by a note indicating the date to which they refer.

Census returns have been used when an estimate for the year in question was not available. For years in which the results of a current enumeration as well as an estimate were available, the census figure has been shown in place of the midyear estimate if the two figures appeared not to be in sufficient agreement. Whenever a census return appears in this table, it is shown in boldface type for easy identification.

For consistency with Table 1, a United Nations estimate has been used for 1959 whenever an official figure was lacking.

Series believed to be of questionable reliability are set in italics rather than in roman type. No attempt was made to evaluate separately each estimate in the series. Rather, the classification of other than current estimates into reliable and of questionable reliability is based on an assumption that the type-of-estimate code for the latest year refers also to estimates for perhaps the last 5 years; that the code qualifying estimates for 1949-1951, shown in the 1952 *Demographic Yearbook,* applies equally to estimates back to 1945 and that series classed as reliable according to these two codes must also have been relatively reliable in the intervening and earlier years. Thus, these assumptions have the effect of classing the earlier estimates in the series as better than they might have been and overstating reliability between 1920 and 1950. But since the criteria for current reliability is rather stringent, and since there were few cases where the evaluation of 1949-1951 estimates was "poor" while that for 1959 and proximate years was "good", the errors of classification probably tend to be minor. For further details on the method, see page 19.

Coverage: This table, containing data for 224 geographic areas, is one of the most comprehensive published in the *Yearbook.* Major countries are included even if the recent span of years for which estimates are available is short; smaller areas are excluded unless the period of years is relatively extensive.

The policy of Table 4 is to show total population in so far as possible, rather than that for sub-national segments.

Limitations: Comparability of population estimates is limited by the factors set forth on p. 15, namely by the variation in the meaning attached to the terms *de jure* and *de facto* in defining the total count, by the accuracy of the census on which estimates are based and by the method of estimate construction.

Intercensal estimates are usually reviewed when the results of a new census become available. However, this is not invariably done, with the result that in a number of cases, a marked break appears in the series between the unrevised pre-censal estimate and the census result. In addition, since many of the results of the 1960 census programme are still provisional, the estimates for the preceding period have not yet been brought into accord with them. In some of these series, the need for revision is obvious; in others, only minor discontinuities are evident. Series which show a marked irregularity of this type are distinguished with a section mark (§) in the stub and a vertical bar (|) at the break in continuity; these symbols together with the use of italic type referred to above, should give an adequate indication of the less-reliable series.

Table 5

Table 5 shows a trend of population classified by age and sex for 1940-1960. Data included are primarily the results of population censuses and intercensal and post-censal estimates constructed by the natural increase method. In the absence of midyear estimates, a mean of two acceptable end-year estimates has been substituted, and if only one end-year estimate is available, it is shown. The reference date of the census or estimate appears in the stub of the table and the results of censuses are further identified by a (C) following the date. Means, as described above, are not separately identified except in the case where the calculated mean differs from a true midyear estimate shown in Table 4.

The age classification shown for censuses and estimates is based, unless otherwise indicated, on age at last birth-

[30] *Op. cit.*

day and the data are the unsmoothed tabulation results. The classification includes 20 categories as follows: under 1 year, 1-4, 5-9, continuing in 5-year groups to 84, a residual category of 85 and over and unknown. This is in accord with the classification recommended by the United Nations.[31]

Unless otherwise noted, data relate to the modified present-in-area population of geographic areas within present territorial boundaries, as described on p. 17. If the modification has involved large numbers of persons, a special note is also appended for clarity even though the resulting estimate is the standard for the table.

In accordance with the policy adopted in the 1959 *Yearbook,* estimates believed to be of questionable reliability are set in italics rather than in roman type. The classification of estimates into reliable and less reliable is based on the method of their construction as described in connexion with total figures in Table 4. No attempt has been made to take account of age-reporting accuracy, described on page 18.

Coverage: Table 5 includes one or more age-sex distributions of population for 208 geographic units, making a total of 1,085 separate arrays, of which 367 relate to a census count and 718 to estimates. All geographic units having tabulations of enumerated population by age and sex are included, regardless of the ethnic coverage of the census.

Availability was not the sole criterion used in determining the scope of Table 5; a number of estimated age-sex distributions were deliberately excluded on the basis of their construction. To be included in this table, an estimate must have been constructed by the natural-increase method, supplemented by migration statistics if available. Distributions which result when the estimated total population is distributed by age and sex according to percentages in each age-sex group at the time of the census are not acceptable. Such distributions are on file for Bolivia, Brazil, Burma, Ceylon, Chile, Colombia, Costa Rica, Ecuador, the Egyptian region of the United Arab Republic, Honduras, Italy, Mexico, Panama, Peru, St. Kitts-Nevis and Anguilla, Singapore, Thailand and Venezuela.

Limitations: Comparability of population data classified by age and sex is limited in the first place by variations in the definition of total population which has been discussed in detail on p. 15, and by the accuracy of the original enumeration, also discussed above. Both of these factors are more important in relation to certain age groups than to others. For example, underenumeration is known to be more prevalent among young children than at older ages; the composition of the total population is primarily a function of the inclusion or exclusion of certain groups who may be of selected ages, such as members of the armed forces and so forth. Consideration should be given to the implications of these basic limitations in using the data.

Further to these general qualifications are the special problems of comparability which arise in relation to age statistics in particular. Age distributions of population are known to suffer from certain deficiencies which have their origin in underenumeration of infants and in irregularities in age reporting, a discussion of which is given on p. 17. Although some of the irregularities in the age statistics tend to be obscured or eliminated when data are tabulated in 5-year age groups, precision still continues to be affected, though the degree of distortion is not always readily seen. The classification of age distributions by Whipple's Index given on p. 18 will thus continue to serve as a guide to the evaluation of age accuracy in Table 5.

Another limitation on comparability is found in the basis for the age classification employed by the various countries. Whenever it was known that the classification was based on year of birth rather than the standard "age at last birthday", the data are so noted in the tables and allowance should be made for this factor in using them. The effect is described on page 17.

Deviations from the standard age classification of the table are shown by bracketing and footnotes. Although precise international comparability of specific age groups is often lacking,[32] the data are nevertheless included because of their basic value for the area concerned. This is particularly true for African areas. Since statistics for Africa have not been generally available until recent years, the results of sample censuses and others employing non-conventional methodology are included because of the scarcity of information for this continent.

In connexion with the age classification, it should be noted that zero frequency reported in the unknown-age category is not always an indication of perfect age reporting; it is more often an indication that an assumed age has been assigned before tabulation began. The method of age allocation is not always known and hence it is noted infrequently in the tables, but the possibility of its having occurred should not be overlooked.

As noted in connexion with Table 4, intercensal estimates of total population are usually revised, if required, to accord with the results of a census of population. Age-sex distributions, however, are not always revised in this way; those which have not been revised are marked provisional in this table. These should be used with caution in analyzing time trends though their utility for studying age structure for that year is probably unimpaired.

Table 6

This table is designed to show the date of each true census of population taken between 1900 and 1961 in each country and territory of the world, the male and female population in each, and the average annual per cent rates of population growth for both sexes combined, calculated over the intercensal periods. Available male and female frequencies are shown even though their sum differs from the final total population of the area.

An historical series of intercensal rates of population growth was last shown in the 1955 *Demographic Yearbook* but that presentation differed from this one in that it showed only population for both sexes combined rather than male and female separately, and it included area figures as well as population. In Table 6, area is assumed to be present area, i.e., that shown in Table 1, and to remain unchanged retrospectively unless otherwise indicated. The objective of Table 6 is thus to show a com-

[31] *Principles and Recommendations for National Population Censuses, op. cit.,* para. 503.

[32] There are at least 58 varieties of nonstandard age classes in table 5.

parable trend and history of geographically nation-wide census taking, irrespective of ethnic coverage, for the present territory in retrospect.

Unless otherwise indicated, the data shown in Table 6 relate to the modified present-in-area population within present boundaries. This type of population and its comparability with *de jure* figures has been discussed in detail on page 17. When a complete series of *de jure* census returns was also available, these have been included in the table for reference.

Horizontal rules have been used to indicate a break in the comparability of the series. Historically consistent series can thus be identified by the absence of such rules. A rule and a space extending through the stub and body of the table indicate a second time series; a rule extending through the data columns only indicates a change in the series due to geographic or other differences.

Coverage: Table 6 contains enumerated population data for 222 countries and territories. All geographic units having had censuses of population are included, irrespective of the ethnic coverage.

Rate computation: Annual average per cent rates of change are the average geometric rates of increase or decrease between two successive census returns, computed using the following formula:

$$P_1 = P_0 \ (1 + r)^t \times 100$$

where P_0 is the population at the beginning of the period,

P_1 is the population at the end of the period,

t is the number of years intervening, and

r is the annual rate of change.

Rates were computed between census returns for both sexes and only for those considered "comparable". Comparability, which was assumed to be present lacking evidence to the contrary, was considered to be dependent on consistency throughout the series as to type of census, i.e., *de jure* or *de facto*, on a more or less consistent degree of under- or over-enumeration, and on unchanged area or the adjustment of population to the present area. Rates are not calculated for non-indigenous census series, because population change in these segments is often the result of extraneous factors not demographic in origin.

Limitations: Because these are enumerated populations, they are subject to under- or over-enumeration and to variations in the concept of *de jure* and *de facto* through the years. Wherever it was significant, the factor of under- or over-enumeration has been pointed out in the tables. The only available information on the definitions of the total population is that found in Table A, p. 16. Reference should be made to this table for information on population composition at the later censuses. For previous censuses, no definitive information is available, but it may be assumed that they followed more or less the same pattern.

Table 7

A time trend of the population of the capital city and each city which had 100,000 or more inhabitants according to the latest estimate or census is shown in Table 7. Included are national and city census results from enumerations carried out between 1940 and 1961, supplemented by estimates for 1955-1961. The estimates may be identified by an (E) following the date in the stub.

Since the way in which cities are delimited differs from country to country, efforts have been made to include in the table not only data for the so-called city proper but also those for the urban agglomeration if such exists. The urban agglomeration has been defined as including the suburban fringe or thickly settled territory lying outside of, but adjacent to, the city boundaries. Whenever an urban-agglomeration figure is available, it has been used as the basis for applying the 100,000 criterion in order that every city of the selected size class, however defined, may be included.

The order of presentation in Table 7 is English alphabetical, although the names of cities are given in the language of the country to which they pertain or, if required, in a transliteration of it. These principles of presentation were adopted because of the difficulty of establishing English and/or French equivalents for official names of cities. For purposes of identification, the name of the capital city is printed in small capital letters.

Coverage: Cities from 194 countries and territories are included in Table 7; of these, 123 show the capital city only, while 71 show the capital and one or more cities which, according to the latest estimate, had 100,000 or more inhabitants. In many cases, these cities had less than 100,000 in previous years. According to this table, cities with population of 100,000 or more currently appear to number 1,413, but this should not be considered a precise world total because, as may easily be observed, data have not been made available for many countries in which cities of this size may be presumed to exist.

Limitations: City populations are especially affected by the difficulties of defining the *de facto* and *de jure* concepts in relation to them. Comparability is also impaired by different methods used in constructing the estimates and by the lack of precision which may be present even in the same methods. For example, births and deaths occurring in the cities do not all originate in the population present in, or resident of, that area. Therefore, the use of natural increase to estimate the probable size of the population is often the source of large errors. Internal migration is a second estimating component which cannot be measured with accuracy in many areas. Because of these factors, data in Table 7 are of limited value for international comparisons.

Comparability is even more limited by variations in the national concepts used to define a "city" for administrative purposes. In most countries, cities are localities with fixed boundaries and an administratively recognized urban status which is usually characterized by some form of local government. In others, e.g., Japan, Ryukyu Islands, France, the "city" in Table 7 is an administrative division composed of a populated centre and adjoining territory which may be distinctly rural in character or may contain other quite separate urban agglomerations. Whenever it was known that the data referred to the latter type, they have been noted in the table, but even with these warnings, international comparisons must be made with extreme caution.

Finally, it must be mentioned that data in Table 7 may have been obtained from city censuses (as in Liberia) from national censuses, from regular estimating proce-

dures, or from *ad hoc* surveys. Their reference dates tend to be diverse in any case, and inasmuch as city populations follow all types of growth patterns, comparison between data for different years should be carried out with these factors in mind.

Table 8

This table, published for the first time in the *Demographic Yearbook,* shows a time trend of the aggregate population living in localities of 100,000 or more inhabitants and in those of 20,000 or more, the number of such localities, and the percentage that the aggregate populations form of the total for the country.

Data from censuses of population carried out between 1920 and 1960 are included, together with such estimates as were readily available. The latter, identified by an (E) in parenthesis following the date in the stub, includes primarily estimates of 100,000-plus cities, summed from Table 7; in these cases, information for 20,000-plus cities is generally not available.

A code showing the type of locality to which the data refer at each date is given on the table and a more specific description of that for each country is given at the end of the table. The three categories of the code (**a**, **b** and **c**) are described as follows:

a—Agglomerations or clusters of population without regard to official boundaries or administrative functions.

b—Localities having fixed boundaries and an administratively recognized town status which is usually characterized by some form of local government, operating under a charter or under terms of incorporation. Such localities have various designations; among the most frequent are: cities, towns, boroughs, urban districts and municipalities. Sometimes, they are districts which include a central agglomeration and the surrounding territory that is administered from the central place; sometimes, they are separate cities, wholly urban in character, with city limits which may fall inside the edges of the agglomeration. The aggregate of these localities often comprises the urban population as defined by the particular country.

c—Minor civil divisions (often the smallest administrative divisions) which have fixed boundaries and which together comprise the entire territory of the given country. Such units do not necessarily have local government or town status, though some of them—usually those with large populations—may do so. Classifications of this type are the most difficult to evaluate with respect to their conformity to agglomerations or clusters. In most countries, they conform in a general way so far as relatively large agglomerations are concerned, but medium-sized and small clusters are likely to be obscured by the adherence to fixed territorial units.

It will be noted that localities in this table refer overwhelmingly to type **b**—the localities which have fixed boundaries and are administratively recognized as cities or towns. These are the city-proper entries in Table 7; those coded **a** are the urban-agglomeration data in Table 7.

Unless otherwise specified, total population figures refer to the modified present-in-area population within present territorial boundaries of the countries concerned.

Coverage: Statistics are shown in Table 8 for 149 countries and territories; of these, 76 show data for both sizes of localities and 28 show only 20,000-plus aggregates. Because of their geographic nature, the data relate to those censuses or estimates which were nation-wide in coverage and which included all persons present in or residing in the area.

Exclusions from the table include cities such as Berlin, Ceuta, Melilla, Gibraltar and Monaco where the locality of 100,000 or more is coextensive with the territory, and countries for which no total population estimate is available for computation of percentages. The latter restriction applies only to Ethiopia, the data for which appear in Table 7.

It will be noted that a number of areas are shown with zero frequencies; these are not, however, the maximum number of such areas because they represent only those which tabulated total population by locality-size groups. An additional number of countries undoubtedly belong in this category, at least in respect of 100,000-plus localities (see Table 7) but these have not been repeated in Table 8.

Per cent computation: Percentages are the aggregate populations in each locality-size group per 100 total population in the country or territory at the same date. Percentages have been computed to two decimals and rounded to one for presentation.

Limitations: Census statistics in Table 8 are affected by all the limitations imposed by differences in definition of total population and the varying importance of underenumeration; these have been discussed on page 17 above.

The estimates are also limited by the qualifications of population estimates in general, as described on page 19.

More important than either of these, however, are the limitations introduced by the varying national definitions of localities on which the table is based. The three categories of localities have been described above. Some degree of comparability may be assumed to exist between data classified as **a**, **b** or **c** but great care must be taken in comparing data for localities of different types. This is probably most important in comparing percentages or trends for localities of type **b** with those of type **c** because of the difficulty of ascertaining the degree of urbanization in the minor civil division. So long as the type of locality involved remains unchanged from year to year, the time changes in the proportion of the population living in places of 20,000 or more and in places of 100,000 or more do provide a useful index of urbanization for any one area. They also are useful for analysing world and regional trends, since they are relatively free from the complexities introduced by national definitions of urban status. The data are perhaps most useful when considered in relation to those from Tables 7 and 9.

Table 9

Table 9 presents a time trend of the number and per cent of population enumerated or estimated as urban, by sex, during the period 1920-1960. A limited trend for 1900-1950 was presented in the 1952 *Demographic Yearbook* and one for censuses taken between 1945 and 1954 in the 1955 *Demographic Yearbook*. Table 9 brings up to date these two tables and expands the time coverage considerably.

In general, data shown are from nation-wide censuses

of population carried out among all segments of the population. A few estimates are included when these appeared to have been constructed by a method other than proportionate distribution based on census results. The estimates may be identified by an (E) following the date in the stub.

In the two previous presentations, each national definition of urban was given adjacent to the data for the country or territory. In this issue, the definitions are listed together at the end of the table. Any differences observed between these definitions and those shown in previous *Demographic Yearbooks* should be considered as revisions based on more or improved information.

Unless otherwise noted, data relate to the modified present-in-area population within present territorial boundaries.

Coverage: A total of 135 countries and territories is included in this table; of these, 107 show data for males and females, as well as for both sexes. This coverage cannot, however, be considered as comprehensive. For a number of countries and territories, especially in Africa, only one populated centre—the capital—could possibly qualify as "urban" in any sense. These areas are not included in Table 9, but an idea of which these might be may be had from Table 7.

Per cent computation: Percentages are the number of persons (male, female, and both sexes separately) classified as urban per 100 persons enumerated or estimated in the corresponding total population at the same date. Percentages have been computed to two decimals and rounded up to one for presentation.

Limitations: The basic limitations imposed by variations in the definition of the total population and in the degree of underenumeration is perhaps more important in relation to urban-rural than to other distributions. The classification by urban and rural will, for example, be affected by variations in defining usual residence for purposes of subnational tabulations, inasmuch as urban is usually defined in terms of towns or cities. Likewise, the geographic differentials in the degree of underenumeration in censuses will affect the comparability of these categories throughout the table. A more important and specific limitation, however, lies in the national differences encountered in the definition of urban.

Because the distinction between urban and rural areas is made in so many different ways, the definitions have been included at the end of the table. The definitions are necessarily brief and where the classification as urban involves administrative civil divisions, they are often given in the terminology of the particular country. As a result of variations in terminology, it may appear that differences between countries are greater than they actually are. On the other hand, similar or identical terms (e.g., town, village, district) as used in different countries may have quite different meanings.[33] However, in many cases, it will be found that the unit of classification is the same as the type of locality classified by size in Table 8.

[33] For a more extended treatment of problems and practices in urban and rural classification, see *Data on Urban and Rural Population in Recent Censuses,* United Nations. Department of Social Affairs, Population Division and Department of Economic Affairs, Statistical Office. Document ST/SOA/SER.A/8, Lake Success, July 1950. 27 p.

It will be seen from an examination of the definitions that they fall roughly into three major types: (1) classification of certain size localities as urban; (2) classification of administrative centres of minor civil divisions as urban and the remainder of the division as rural; and (3) classification of minor civil divisions on a chosen criterion which may include type of local government, number of inhabitants, or proportion of population engaged in agriculture.

Thus, urban status may be granted to places with as few as 250 inhabitants in Denmark, while in Korea the lower limit is 40 000 persons. In Northern Ireland and Bulgaria, urban means places with urban status, regardless of size; in Israel, it implies predominantly non-agricultural centres; in Malta, it is defined as built-up areas devoid of agricultural land. The lack of strict comparability as evidenced by the vague and diverse definitions will be immediately apparent.

The designation of areas as urban or rural is so closely bound up with historical, political, cultural, and administrative considerations that the process of developing uniform definitions and procedures moves very slowly. Not only do the definitions given in Table 9 differ one from the other, but in actual fact they may no longer reflect the original intention of distinguishing urban from rural. The criteria once established on the basis of administrative subdivisions (as most of these are) become fixed and resistant to change. For this reason, comparisons of data over time may be invalidated by the inapplicability of the definition to current circumstances.

Despite their shortcomings, however, statistics of urban population are useful for comparing on a broad scale degrees of urbanization between countries or territories. No matter how they are defined, urban is likely to include a heavy concentration of clearly urban population, while rural will be heavily weighted toward village or clearly rural areas. Thus, the differences between urban and rural characteristics of the population, though not precisely measured, will tend to be reflected in the statistics.

In considering the time trend for any one area, a special word of caution is required to take account of the possibility that changes in the percentage urban may be due at least in part to changes in the definition, especially as between a census of population and a survey which provides an estimate. Reference should be made to the official definitions listed at the end of the table before conclusions are drawn.

Table 10

A time trend of the single and married population, by age, for males and females separately between 1920 and 1960 is shown in Table 10. The population enumerated at censuses during the period together with intercensal estimates is shown, accompanied by the percentages which these marital-status-age-sex groups constitute of the corresponding age-sex group. Percentages single by age and sex were last previously published in the 1949-50 *Demographic Yearbook,* while percentages married appeared in the 1954 issue.

In Table 10, age is defined as age at last birthday or completed years of life. Population 15 years of age and over is classified into 4 categories: 15-24 years, 25-34 years,

35-44 years and 45 years and over. Unknown age is excluded from these categories but is assumed to be in the total 15 years and over.

Single is defined as persons enumerated or estimated as never married, including those whose marriage has been annulled. Married persons are those in formal marriages or in customary, consensual unions and those legally or *de facto* separated from their spouses but not divorced. No assumptions are made concerning the probable true status of persons recorded as marital status unknown. These definitions are in accord with the *Principles and Recommendations for National Population Censuses*[34] and unless otherwise indicated in the source, the data have been assumed to conform to them.

Census returns are shown for both national and subnational segments, depending on the coverage of the respective enumerations. Estimates included are known or assumed to have been constructed on the basis of census returns, using the natural increase and migratory movement to adjust the base population to a current date. The estimates may be identified by an (E) following the date in the stub.

Unless otherwise noted, data relate to the modified present-in-area population of geographic areas within present territorial boundaries as described on p. 17.

Coverage: Table 10 contains data for 130 countries and territories, and, in all, comprises distributions for 390 separate years. National and partial census returns are included. This may be considered relatively comprehensive coverage for a table showing population by marital status, age and sex. An additional number of countries and territories classify population by marital status, irrespective of any but a minimum age; these data are not included in Table 10, but they may be found on pages 202-203 of the 1958 *Demographic Yearbook.*

Per cent computation: Per cent single or married is the number of persons in each age-sex group classified as single or married per 100 total persons in the group at the same date. Per cents have been computed to two decimals and rounded up to one for presentation.

Limitations: Like all population-census data, marital-status distributions are affected by the fundamental concepts employed in defining the census population, i.e., *de facto* and *de jure.* Under- or over-enumeration is also a factor to be considered. Both of these sources of variation have been discussed above on p. 15.

The limitations imposed by the introduction of age into the tabulation must not be overlooked. For a discussion of this factor, see Table 5 above.

Comparability of marital-status statistics is also subject to special limitations originating in the enumeration itself. There is evidence, for example, that the respondent in the enumeration who is divorced may report himself or herself as single, married or widowed. This possibility is confirmed by the fact that the number of divorced persons returned at the census is usually too small in relation to the number of divorces granted and the frequency of re-marriage. Similarly, married males who are separated from their spouses may report themselves as single, while their wives may report themselves correctly as married. Another type of response error is the possible reporting of a single woman with an illegitimate child as married, while the father of the child is reported correctly.

In respect of classification, the same types of variation may exist whereby apparent uniformity of the major categories conceals important differences. Perhaps the most important element in these considerations is the disposition of the consensual or *de facto* unions, especially in those countries where such unions are relatively numerous. Disregarding errors of response the extent of which cannot in any case be estimated, achieving comparability becomes a function of either tabulating the group separately—in which case it may be identified—or of including it with another category. Evidence seems to indicate that partners of consensual unions are more likely to report themselves as married than as single. Because of this tendency and because they are, from the demographic point of view, married, the United Nations[35] has recommended that, when not tabulated separately persons reporting these statuses be classified as married. It will be seen from Table 10 that 26 countries report consensually married separately and 9 as single. For the remaining 95 countries, the disposition must be assumed to be married.

Similarly, the sub-category "separated" may be of uncertain composition. It may contain persons whose marriage has been suspended by legal process, or it may include as well, married persons who are simply living apart and who may or may not intend to remain apart. Since laws and practices with regard to legal separation differ within and among countries, genuine comparability for this group is probably out of the question. Because of this, separated persons are generally included in the category married, although—as will be seen in the table—they are tabulated separately for 24 countries and combined with "divorced" in 15.

The disposition of marital status unknown may also be the source of international non-comparability. In some countries, marital status is never recorded as unknown, a marital status being assigned on the basis of other information. Thus, the category will appear to have zero frequency even though it has, in effect, been absorbed into other statuses.

Table 11

Table 11 shows a time trend of illiterate population 15 years of age and over by sex for the period 1920-1960, and also the proportions which these populations are of the total each year. A similar table showing data for one census was shown in the 1948 *Demographic Yearbook;* corresponding figures for each census 1945-1954 were shown in the 1955 *Demographic Yearbook,* but percentages were calculated only for both sexes combined. Table 11 consolidates these with other available information beginning 1920 into one table relating to population 15 years and over, and shows percentages for male and female separately.

Data shown in Table 11 are census returns and such estimates based primarily on sample surveys as may be available either from original sources at hand or from

[34] *Principles and Recommendations for National Population Censuses, op. cit.,* para. 410.

[35] *Ibid.,* para. 410.

Progress of Literacy in Various Countries[36] and *World Illiteracy at Mid-Century*.[37] The estimates may be identified by an (E) following the date in the stub, and UNESCO data are identified in footnotes.

Illiteracy, for purposes of this table, is defined as reported inability either to read or to write; semi-literates i.e., persons able to read but not write, are thus included with illiterates. Persons of unknown literacy status (whenever these are shown separately in the tabulation) are assumed to be literate, for reasons set forth below under "Per cent computation".

Since national tabulations of population by literacy show a minimum age ranging from 0 to 15, the common denominator of 15 years has been chosen for the table, in order to achieve maximum comparability. This is in accord with UNESCO recommendations to obtain adult illiteracy rates.

Unless otherwise indicated, data relate to the modified present-in-area population of the territory within current boundaries.

Coverage: Table 11 includes data for 131 countries and territories. Geographic coverage has been made as wide as possible in respect of national data or that for the largest subnational group but data relating solely to non-indigenous population is usually excluded since it would ordinarily be highly literate and not representative of the area.

It should be noted that data are completely lacking for a number of economically developed countries, and for many others statistics for current years are not available. This is due to the fact that a question on literacy status is not included in population censuses unless there is need to measure an illiteracy problem, and in many of these countries, illiteracy having been almost eliminated, the need is no longer felt. Hence, series are not shown for the United Kingdom or for New Zealand, while data for Canada stop with 1931; those for Sweden with 1930; those for Finland with 1931 and those for Australia with 1921.

Lack of statistics for under-developed countries and territories is due primarily to the fact that full-scale censuses of population have yet to be taken in many of these. For estimates of the probable range of illiteracy rates in these areas, see the *Estimates of World Illiteracy at Mid-Century*.[38]

Per cent computation: Per cent illiterate for both sexes, male and female separately, is the number of persons 15 and over recorded as illiterate or semi-literate per 100 persons 15 years of age and over in the same age-sex group at the same date. If data on illiteracy were tabulated for a minimum age other than 15, or with none at all, the percentages were computed on the corresponding age group of the population.

As noted above, persons with unknown literacy status were excluded from the illiterate segment. The justification for this treatment rests on the thesis that if the number of persons of unknown literacy is small, the effect of their exclusion from the illiterate numerator is negligible; on the other hand, if they are many in number, an assumption that they are illiterate will overstate illiteracy rates. Subtraction of persons of unknown literacy from the total population would also increase the proportion of illiterate unduly. The percentages as computed may therefore be considered as minimum values.

Persons of unknown age were assumed to be above the minimum age, that is, 15 years of age or over.

Limitations: The principal limitation in connexion with data on illiteracy arises from variations in the definition of illiteracy and in the different age limits imposed on the tabulations. These differences may be particularly important in comparing census returns with results of sample surveys.

In this table, illiterate persons are by definition those who were reported as unable to read or to write. Hence, it includes also semi-literate persons able to read and not write, and those who can write but not read. The latter is especially important where ability to write is determined by ability to sign one's name. Although conformity to the reading-writing definition is assumed in many cases (the necessary information not being available), it is known specifically for some countries that literacy is not defined in accordance with this standard. In Mauritius, North Borneo, and Macau, for example, semi-literates are included with literates. This variation is likely to be more widespread than appears from the table, and it should be kept in mind in interpreting the figures.[39]

Another variation in definition which produces marked lack of comparability over time and between countries is the language reference for the question on ability to read or write. Some countries, such as Portugal, require literacy in their overseas provinces of Angola, Mozambique, etc., to be judged by ability to read and write Portuguese. The result is a very high percentage of illiteracy, although these same persons may be literate in their own dialect. Similar definition anomalies produce non-comparable data in the series for Mauritius where literacy was defined in terms of Chinese and English at one census and in English only at another. Variations of this type are noted in the tables whenever they could be ascertained.

The criteria used by the enumerator in deciding on literacy status and the disposition in the tabulations of persons of unknown literacy are also sources of variation in statistics. In some countries, evidence of school attendance was considered tantamount to literacy and the person so classified. In some, unknown literacy was considered as literate without additional evidence, while in others, absence of an answer to the question was considered to indicate lack of surety and probable illiteracy. These variations, while not evident in the tabulation, must be borne in mind in using the data, especially for areas where the likelihood of a high frequency of "unknown" is strong.

Wherever the minimum age varies, it is obvious that a percentage illiterate computed in relation to the total population would not be comparable from country to country, because the numerator would include varying age segments of the population. To increase comparability, the minimum age in this table has been placed at

[36] *Progress of Literacy in Various Countries*. United Nations Educational, Scientific and Cultural Organization, Monographs on Fundamental Education—VI, 1953, 224 p. plus graphs.

[37] *World Illiteracy at Mid-Century*. United Nations Educational, Scientific and Cultural Organization, Monographs on Fundamental Education—XI, 1957, 200 p.

[38] *Op. cit.*, Tables 7-10 inclusive.

[39] For a more detailed discussion, see *World Survey of Education; Handbook of Educational Organization and Statistics*. United Nations Educational, Scientific and Cultural Organization, Loos, France, 1955, 943 p. Also, *Progress of Literacy in Various Countries, op. cit.*

15 years and the illiterate population considered only for ages 15 and over. Countries with a lower minimum age limit can usually provide the 15 and over group or at least a population corresponding to the illiterate segment. Data for countries with no minimum age, however, will not be comparable. This source of variation must be kept in mind in using literacy data for the total population.

In addition to the special limitations outlined above, it should be remembered that a literacy distribution—like every other census tabulation—is subject to the usual limitations of basic composition and variations in completeness of enumeration.

Table 12

A time trend of economically active population by sex as well as the percentage these form of the corresponding male and female population, all ages, between 1920 and 1960, is set forth in Table 12. A similar table showing data for a single year was shown in the 1949-50 *Demographic Yearbook,* while data from censuses between 1945 and 1954, and 1945 and 1955 were shown in the 1955 and the 1956 issues, respectively. Data shown are from censuses of population taken in the period, supplemented by the results of sample surveys for intercensal years, the latter usually being taken from International Labour Office publications and identified by an (E) following the date in the stub. Data originally published by ILO are identified in footnotes.

Economically active is defined as that part of the population which furnishes the supply of labour for the production of goods and services. In brief, it comprises all persons of either sex engaged in, or actively seeking, productive work in some branch of the economy during a specified period of time. This concept of the economically active is also known as the labour force concept and it theoretically includes the following groups of workers:[40]

1. Civilian employers, employees, own-account workers and unpaid family workers
2. Armed forces
3. Employed and unemployed persons, including those seeking work for the first time
4. Persons engaged in part-time economic activities
5. Domestic servants

The economically *inactive* population, on the other hand, comprises persons with no economic activity at the moment of the census. This group normally includes housewives and students not economically active, retired persons (with or without income), inmates of institutions, children below the working age, persons past the working age, and so forth. Wherever possible, exceptions to these definitions have been noted in the tables.

Persons whose activity was not stated are excluded from the economically active group; poorly-defined activity, on the other hand, is included in the active sector.

Unless otherwise noted, data relate to the modified present-in-area population within current geographic boundaries. The minimum age to which the economically active data refer is given on the table.

[40] It should be noted that these are not mutually exclusive categories but examples of groups, the disposition of which must be considered in evaluating comparability.

Coverage: Data for 526 separate distributions relating to 172 countries and territories are included in Table 12. Both national censuses and those covering ethnic subgroups of the population are included for maximum coverage. Estimates derived by applying proportions of economically active population found at the census date are not included, but those obtained from sample surveys are.

Per cent computation: Percentages are the number of persons (both sexes, male and female separately) classified as economically active according to national definitions per 100 persons in the total population in the same sex group. Since no account is taken of the minimum age of the economically active segment, the numerator relates to a specific age segment while the denominator represents all ages. This method was chosen because its computation is not dependent on availability of an age-sex distribution of population and it can, therefore, be computed for a larger number of countries than the more refined age-limited index. The resulting percentages known as "crude labour force participation rates" or "crude activity rates" are also an indicator of the ratio of producers to dependents in the total population.

Limitations: In common with other types of census data, the economically-active population is subject to important limitations, both in respect of the definitions employed and in the methods of compiling the data. A detailed exposition of these may be found in *Handbook of Population Census Methods, Volume II,* Economic Characteristics of the Population;[41] a brief summary is given below for convenience.

The treatment of the unpaid family workers, that is, persons who assist without pay in economic enterprises operated by other members of their households, is perhaps the most important variable in assessing comparability of the economically active population. This group is a factor in defining the economically active population, yet actually it has relatively weak attachment to the labour market, except in predominantly agricultural economies. In some countries, women, old persons, and young people living on farms, for example, are classified as "engaged in economic activity" in the capacity of "unpaid family workers", while in other countries, members of these groups would be classed as housewives, retired persons, and students, and placed in the *inactive* population. Such variations are extremely important in assessing comparability, both in one country over time and between countries.

Persons with dual status, i.e., those engaged only part-time in economic pursuits, are classified in some countries as part of the economically active population, while in others, they are considered as inactive. In still other countries, the decision on the classification of these persons depends on the proportion of time spent in remunerative occupations. All of these variations limit comparability.

Variation in the treatment of members of the armed forces and inmates of institutions or reservations is also a source of non-comparability. The differences which originate in the method of handling these two groups,

[41] *Handbook of Population Census Methods, Volume II,* Economic Characteristics of the Population. Studies in Methods, *op. cit.*

as well as those arising from the treatment of retired persons, result primarily from the use of the "usual occupation" (gainful worker) approach in identifying the economically active population, rather than the "labour force" system.

There is also considerable variation among countries in the treatment of unemployed persons, particularly new workers seeking jobs for the first time. Under the gainfully-occupied approach in its simplest form, there may be no specific instructions covering the unemployed. Thus, in some countries, these persons are included with the economically active population, as recommended; in some countries, they are excluded. Sometimes, the persons temporarily unemployed are included, while those seeking work for the first time are excluded.

Differences among countries in the definition of the age group of the population to be enumerated for economic characteristics is another important source of variation. A minimum age limit for census questions on economic activities has been used in many countries, dictated by the legal minimum age for employment and the compulsory school attendance age. Not only does this procedure make it impossible to know how many children below the stated age are employed, but it imposes limitations on comparability, because of the variation in the ages selected and because data are not tabulated in such a way that all children below a stated age could be identified in distributions such as that by industry. From Table 12, it will be seen that, according to the latest census, 17 countries have chosen 15 years as the minimum; 36 have selected 14 years; 8 countries use 12 years; 27 countries have placed the limit at 10 years. Obviously, with such variation in the lower limit, the proportions of the total population economically active cannot be strictly comparable from one country to the other. Comparability must be achieved by setting an arbitrary age limit.

Non-comparability due to differences in definitions described above affect chiefly the statistics for women, youths and aged persons, because relatively large proportions of the workers in these groups are engaged in unpaid family work or on a part-time seasonal and intermittent basis. Thus, comparability of the statistics for men is, in general, much better than statistics for women, and the firmest basis for international comparisons is provided by the data for men in the middle range of working ages.

In evaluating comparability, it should be remembered that census and survey data on the economic structure of the population relate to a given period of time near the date of enumeration. They are not "current" statistics. Therefore, although such characteristics tend to change slowly, allowance must be made for possible shifts over time, especially in respect to abnormal periods, such as war and its aftermath. International comparability of data for the same year may also be affected by national seasonal employment patterns. Among these may be mentioned shifts toward agriculture at harvest time, the employment of women and students in merchandising and other activities during certain holiday seasons, and the changes in activities during dry and wet seasons in some countries.

Special attention is drawn to the fact that because of differences in concepts, economically active population derived from population census procedures may tend to lack comparability with the results of labour-force sample surveys. Hence, conclusions based on comparison of census and survey results should be made with extreme caution. Special care is also required to ascertain that the results of successive population censuses in the same country are comparable, especially insofar as definitions and concepts are concerned.

Table 13

This table presents new and revised data on the trend of live births for each year 1950-1959 together with crude birth rates for the same period.

Data shown are obtained almost entirely from civil registers of live birth but, in addition, officially estimated rates are included wherever possible in order to provide an idea of the probable true level of natality in areas where registration statistics are especially defective. These estimates have been obtained from sample surveys, analyses of consecutive census returns and the like, and they are so identified in the tables.

The quality-of-data code appears in the first column of Table 13 in the form C, U or . . ., and its proper interpretation has been explained on p. 23 above. Wherever precise measures have been made available by the countries, the incompleteness of registration has been further described in terms of percentages, given in footnotes to the codes.

Data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than in roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Statistics for a total of 194 geographic units are included in Table 13. Major countries are shown even though figures for recent years are lacking, and data for segments of the population are presented when statistics are not available for the country as a whole. These subnational data are included not as representative statistics but as an index to the areas for which birth statistics are routinely collected. Since rates based on very small numbers are subject to large errors, a few areas showing frequencies consistently less than 15 are excluded.

Rate computation: The annual crude birth rates shown in Table 13 are the number of live births per 1,000 persons in the population, estimated at the mid-point of the year. In general, the population totals on which rates are based are the official midyear estimates which are set forth in Table 4.

Every effort was made to achieve strict correspondence between the numerator of the rate (live births) and the denominator (population), and notes are used to describe instances where correspondence could not be obtained.

Limitations: The limitations imposed by the quality code and the classification as reliable or unreliable derived from it have been described elsewhere. In using data from this table, care must be taken to consider also the effects of tabulation by date of registration rather than by date of occurrence. Countries which are known to have adopted the registration basis of tabulation are identified in the table with a dagger (†), which has been placed in the same column as the quality code

for convenience in evaluating the combined effect. It should be emphasized that whenever the lag between occurrence and registration is prolonged, i.e., where a large proportion of live-birth registrations are delayed—as in some parts of Latin America, Asia and Africa—live-birth statistics by date of registration may give a very distorted or even wholly erroneous picture of natality trends. They may often produce birth rates of credible magnitude even though births known to have occurred admittedly fail to get registered. In such cases, incompleteness of current registration is masked by the inclusion of events which occurred in previous years, and the resulting data may be very misleading, especially insofar as fertility characteristics are concerned.

The countries in which live-birth statistics are defined to exclude infants born alive who die before registration of their birth, or before having survived 24 hours, are noted in the tables. The effect on birth statistics is one of understatement, the general magnitude of which has been discussed in the *Handbook of Vital Statistics Methods*.[42]

Irrespective of their limitations, crude birth rates do provide a measure of gross additions to the population through natural increase. They can give also a general idea of trends over time within one area and information which allows the rough classification of countries according to levels of natality. But because of the variation between countries in the age and sex composition of the population, crude rates do not precisely reflect differences in fertility and they cannot, therefore, be used alone to evaluate current trends and future prospects.

Table 14

Data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than in roman type. A description of the basis of this quality specification may be found on p. 23.

Live births by age of mother are given in Table 14. The age classification begins with an under-15-year category and continues through quinquennial groups to 49, 50 and over and unknown. Age in this as in other tables showing this characteristic is defined as age at last birthday or completed years.

Coverage: The latest available distribution—either new or revised—is included in the table for each of the 110 geographic areas reporting 50 or more births, even though the year to which data relate is not a current one. Thus, the table may serve as an index to those geographic areas which tabulate live births by age of mother and, in addition, it may give some indication of the timeliness of the statistics.

Limitations: Comparability is affected by differences in the basis of tabulation, i.e., date of occurrence or date of registration. The dagger (†) in the stub indicates the countries which tabulate by date of registration, the implications of which have been set forth on p. 24.

Because these are statistics classified according to age, they are subject to the limitations with respect to accuracy of reported ages similar to those already discussed in connexion with population by age and sex. The absence of frequencies in the unknown age group does not necessarily indicate completely accurate reporting and tabulation of the age item. It is often an indication that the unknowns have been eliminated by assigning ages before tabulation, or by proportionate distribution after tabulation. On the other hand, large frequencies in the unknown-age category may indicate the inclusion of illegitimate births, for which the data on birth records are rarely complete.

One other factor must also be kept in mind in using these data. This is the variation which may result in data for countries which calculate age of mother at birth of child (or at registration) using the exact dates, i.e., day, month, and year, and for those which use the year alone. Information on this factor is given in footnotes when known.

Lack of strict comparability, both among data for different countries shown in this table, and between those shown here and in Table 13, is due to a variety of causes. In certain instances, data by age refer to deliveries or confinements rather than to live births; moreover, in some cases the confinements referred to are those resulting in live birth only and in others to those resulting in live-born or stillborn offspring. Some countries restrict tabulations by age of mother to legitimate births only, while totals of live births in Table 13 relate to all births, i.e., legitimate and illegitimate. In most cases, this limitation qualifies the data very little, but where illegitimate births are relatively numerous, data limited to legitimate births cannot be taken as representative. Similarly, for a few countries, the distribution of live births by age of mother is confined to infants born alive who did *not* die before registration of birth, whereas the totals in Table 13, include those who died before registration.

Table 15

This table presents the number of deaths which occurred each year 1950-1959, together with corresponding crude rates.

In a number of cases where civil-registration data are known to be non-existent or grossly inaccurate, it has been possible to include estimated rates which are thought to reflect more accurately the true levels of mortality. These official rates for isolated years have been obtained from sample surveys, from analysis of consecutive census results and from informed guesses. To distinguish them from registered data, they are identified and their nature explained in footnotes.

In accordance with the usual practice, the quality code (C, U and ...) is presented in the first column of the table and, in addition, data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Deaths and death rates are shown for 190 geographic units. Major areas, even though lacking recent data, are included; data for segments of population, e.g., non-indigenous population and population living in a major city, are included when statistics for the country as a whole are not available. Such data are of only minor significance, but they do serve to indicate the areas for which death statistics are obtainable. Since rates based on very small numbers are subject to large errors, a few areas

[42] *Op. cit.*, Chapter IV.

showing frequencies consistently less than 15 are excluded.

Rate computation: Crude annual rates shown in this table are the number of deaths reported for a calendar year per 1,000 persons present in the same geographic area at the mid-point of the year or, in a few cases, at the census date or at some other date within the year. In general, the population totals on which rates are computed are those presented in Table 4.

Every effort was made to achieve strict correspondence between the numerator of the rate (deaths) and the denominator (population), and notes are used to describe instances where correspondence could not be obtained.

Limitations: Although the factor is of greatest importance in connexion with live births, attention is directed to the variation among countries in the basis of tabulation, i.e., by date of occurrence or date of registration. The symbol (†) identifies those areas which tabulate according to the registration date. The implications of this practice are described on p. 24.

The possibility of error's being introduced by exclusion of deaths of infants who died before registration of birth should not be overlooked. The effect of this procedure may be judged from comparative data for Guadeloupe and Martinique, set forth in the 1957 *Demographic Yearbook*.[43]

In addition to these minor sources of variation, it must be emphasized that because they take no cognizance of differences in the age-sex composition of populations and since mortality is highest at the older and younger ages, crude death rates are not strictly comparable from area to area or for the same area over time, and care should be exercised in using them for this purpose.

Table 16

Statistics of infant mortality (deaths under 1 year of age and infant-mortality rates) are given in Table 16 for the period 1950-1959. In order to give some idea of the infant mortality in areas where registration is faulty or non-existent, several rates officially estimated from different types of data have been included. To distinguish them from the regular registered rates, their nature is explained in footnotes.

In accordance with the usual practice, the quality code (C, U and ...) is presented in the first column of the table and, in addition, data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Data in this table relate to the present-in-area population of the 157 geographic units for which recent statistics on infant deaths were reported. Some of these areas are represented by data for sub-national population groups; these are not nationally significant, but they are included in order to provide an index to the availability of infant-mortality statistics throughout the world.

Rate computation: Computed in accordance with the conventional method, infant-mortality rates shown here are the number of deaths under 1 year of age per 1,000 live births which occurred during the same time period. This means that no adjustment was made to take account of the fact that some of the infant deaths which occur during a given year are deaths of infants who were born during the preceding year. However, unless the numbers of live births or infant deaths are changing rapidly, the error involved is not important.[44]

Limitations: Perhaps the most important and widespread limitation on the comparability of infant-mortality rates is that resulting from compiling statistics of infant deaths and live births by date of registration, irrespective of the date of occurrence of the events. Where these procedures obtain, a large increase, for whatever reason, in the number of live births registered in any one year may introduce sizable errors into the infant-mortality rates, especially since deaths tend to be more promptly reported than births.

If the delay in registration remains nearly constant and is approximately the same for births and deaths, the rates are not affected to any appreciable degree. But if—as is the case in many countries—a large proportion of the births are not registered until many years after occurrence, then infant-mortality rates obtained by relating infant deaths for any one year to births which occurred over a period of years, have little validity. Because of the importance of this factor, especially as it relates to the live births which constitute the denominator of the infant-mortality rates, the statistics known to be by year of registration are identified with a dagger (†).

Even on a date-of-occurrence basis, underregistration of births and infant deaths also affects the infant-mortality rates unless the proportion registered is the same for both components. The code C or U, discussed in detail on p. 23, will serve as a guide in this connexion.

This code, which for lack of precise information is essentially that shown in connexion with deaths at all ages in Table 15, refers primarily to the completeness with which deaths under one year are registered and reported. As noted above, differences in levels of completeness between the two components of the infant-mortality rate, i.e., the infant deaths and the live births, will bias the rates upward or downward, the direction of bias depending on which component is more fully registered. This factor is not reflected in the choice of type which distinguishes reliable from unreliable data; in each instance, rates are shown in the same type as the corresponding frequencies.

Another factor which has a bearing on the completeness of live-birth and infant-death registration is that concerned with the statistical definitions of the events to be reported. The exclusion from both the live-birth and the death register of live-born infants who die before 24 hours of age or before registration of birth, may distort the statistics to some extent, tending to give the rates a downward bias. Failure to register as a live birth each infant death which occurs during the first few weeks of life may also be a factor in the lack of comparability among infant-mortality rates, but the effect, if any, would be toward an upward bias.

[43] In Table 7.

[44] For a more detailed discussion of this problem, see "The Measurement of Infant Mortality" by W. P. D. Logan, *Population Bulletin of the United Nations*. Department of Social Affairs, Population Division. Document ST/SOA/Ser.N/3, October 1953, pp. 30-67. (Sales No. 53,XIII.8)

Table 17

Table 17 is the regular trend table of late foetal deaths and corresponding ratios, which shows data for each year, 1950-1959. The data shown are obtained from civil registers of foetal death.

A late foetal death is defined for purposes of this table as one which occurred after at least 28 completed weeks of gestation but prior to complete expulsion from the mother. When it was known that data in Table 17 did not conform to this definition, footnotes have been appended. Full and precise information on current national definitions is not available for all areas and all years, but reference should be made to the *Handbook of Vital Statistics Methods*[45] for additional details.

In accordance with the usual practice, the quality code (C, U and . . .) is presented in the first column of the table and, in addition, data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than roman type. A description of the basis for this quality specification may be found on page 23.

Coverage: A total of 134 geographic areas were able to be included in Table 17. Major countries are shown even though figures for recent years are lacking, and data for segments of the population are presented when statistics are not available for the country as a whole. These sub-national data are included not as representative statistics but as an index to the areas for which late foetal-death statistics are routinely collected.

Since ratios based on very small numbers are subject to large errors, a few areas showing very small frequencies (consistently less than 15) are excluded. All others are shown, together with ratios, although it is recognized that some of these are of doubtful validity. Since the absolute numbers are shown in the table, no attempt has been made to call attention to ratios based on frequencies between 15 and 50. It is assumed that reference will be made to the size of the frequencies before drawing conclusions from the ratios.

Rate computation: Ratios shown in Table 17 are the number of late foetal deaths reported per 1,000 live births in the same period. Live births, rather than the sum of live births and late foetal deaths, were selected as the base for the ratios in accordance with international recommendations.[46]

All ratios were computed in the Statistical Office of the United Nations on live births shown in Table 13, with the exception of official ratios in the "Proclaimed Area" of Ceylon, for which corresponding live births were not available, and selected years for Ghana where neither element of the ratio has been supplied.

Limitations: Foetal deaths are known to be incompletely registered in most countries of the world, so data for most countries are italicized. However, it must be pointed out that when foetal deaths and live births are both underregistered, the resulting ratios may be of quite reasonable magnitude. As a matter of fact, for the countries where live-birth registration is poorest, the foetal-death ratios may be the largest, effectively masking the incompleteness of the base data. For this reason, possible variations in birth-registration completeness—as well as the reported completeness of late foetal deaths—must always be borne in mind in evaluating foetal-death ratios.

In addition to the indirect effect of live-birth underregistration, foetal-death ratios may be seriously affected by date-of-registration tabulation of live births. When the annual number of live births registered and reported fluctuates over a wide range due to changes in legislation or to special needs for proof of birth on the part of large segments of the population, then the foetal-death ratios will fluctuate also, but inversely. Because of these effects, data for countries known to tabulate live births by date of registration should be used with caution unless it is also known that statistics by date of registration approximate those by date of occurrence.

Finally, it may be noted that the counting as stillbirths of live-born infants who die before registration has the effect of inflating the foetal-death ratios unduly by decreasing the birth denominator and increasing the foetal-death numerator. This factor should not be overlooked in using data from this table. The potential size of the problem has been set forth in the *Handbook of Vital Statistics Methods,* p. 58.[47]

Table 18

The latest available distribution of deaths by age and sex for a number of areas is set forth in Table 18. This, together with the corresponding Table 12 of the 1958 *Demographic Yearbook* and Table 26 of the 1959 issue, brings up to date the time series shown in the 1957 *Demographic Yearbook.*

Age is assumed to be expressed in completed years of life. The age classification used is the internationally recommended one,[48] consisting of under 1 year, 1—4, 5-year categories ending with 80–84, a residual group of 85 and over and unknown.

Data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than in roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Data are shown for 149 areas. Every area reporting at least 50 deaths classified as described above is included, as well as data for sub-national segments (geographic or ethnic). Thus, the table may serve to indicate the countries which tabulate deaths by age and sex and those which follow the United Nations' recommended age classification.

Limitations: Data in this table are subject to the limitations implied by the code of completeness, which was described in connexion with vital statistics in general (p. 23) and which appears on Table 15. Comparability may also be affected to some degree by differences in the basis of tabulation, i.e., by date of occurrence or by date of registration. The symbol of a dagger (†) is used to indicate countries which tabulate by date of registration.

The exclusion from some series of deaths of infants who die before their births are registered and who are thereby counted only as stillbirths or as "infants presented without life" may contribute to the lack of comparability,

[45] *Op. cit.,* Chapter IV and Annex 3.
[46] *Handbook of Vital Statistics Methods, op. cit.,* p. 193.
[47] *Op. cit.*
[48] *Principles for a Vital Statistics System, op. cit.,* Principle 410 (e) (9).

both of total deaths and deaths under one year. When this registration factor is known to exist, the qualification is set forth in a footnote to the table.

Because these data are classified according to age, they are subject to the inaccuracies of age reporting described in connexion with population (see p. 17). The factors influencing inaccurate reporting may be somewhat dissimilar in vital statistics (because of the differences in the method of taking a census and registering a death) but, in general, the same errors can be observed.

As in census tabulations, the absence of frequencies in the unknown age group does not necessarily indicate complete age reporting; it may also be an indication that the unknowns have been eliminated, either by assigning an age before tabulation or by proportionate distribution after tabulation.

Table 19

Cause-of-death statistics, both numbers and rates for the latest year available, are set forth in Table 19.

The classification of cause of death used is the Abbreviated List of 50 Causes for Tabulation of Mortality of the 1948 (sixth) revision of the International List of Causes of Death.[49] Data classified according to previous revisions of the List are not included; those classified according to the 1955 revision are noted.

Data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than in roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: A total of 70 geographic areas appear in this table. The criteria used to determine whether or not data for an area should be included were three: first, availability of statistics classified by, or convertible to, the Abbreviated List mentioned above; second, that the distribution by cause relates to 1,000 or more deaths; and third, that within this distribution, the total number of deaths classified as due to senility and ill-defined or unknown causes (B45) does not exceed twenty-five per cent of deaths from all causes. The second criterion has its basis in the lack of reliability of rates based on small frequencies; the full coverage of deaths by cause, irrespective of frequency size, is shown in the mortality volumes of the *Demographic Yearbook,* the last of which was the issue of 1957. The last criterion is based on the premise that if 25 per cent of the deaths have been coded as due to senility, undefined or unknown causes, the other 49 cause groups in the List must be understated to a marked degree. The limit has been placed deliberately high; it might better be at 10 per cent to exclude all poor data. Moreover, this criterion fails to consider the equally indicative percentages in B46, (all other diseases) —a category which often accounts for an inordinately large proportion of the whole.

Rate computation: Rates by cause are the number of deaths in each cause group per 100,000 persons in the midyear or other annual estimate of population. The rate for all causes combined is, therefore, the sum of the cause-group rates and has a magnitude 100 times that of the crude death rate shown in Table 15.

The population used in the computation of rates is that set forth in Table 4.

Limitations: Cause-of-death statistics, which are of the greatest importance from both the public-health and demographic point of view, are unfortunately subject to many defects in addition to those already described as limiting the international comparability of vital statistics and death statistics in particular (see p. 25). These additional limitations arise mainly from differences among countries in the quality, availability and efficiency of medical services, certification procedures and coding practices. For a full discussion of these, see the 1957 *Demographic Yearbook,* pp. 32-33.

Known aberrations are specified in footnotes to the tables. However, particular care must be taken in using distributions with relatively large numbers of deaths attributed to senility, unknown, and ill-defined cause (B45). Distributions with 25 per cent or more of deaths in this category have been excluded from the table (see Coverage), but others of dubious reliability remain. The all-other-causes group (B46) must also be scrutinized. Large frequencies in these two categories, B45 and B46, may indicate that causes of death among whole segments of the population have been undiagnosed, and the distribution of known causes in such cases is likely to be quite unrepresentative of the situation as a whole. An examination of the distributions from this point of view, together with the general quality code found in Table 15 and the visual classification of statistics into reliable and less reliable by showing the latter in italics, should provide a basis for a rough evaluation of the quality of cause-of-death statistics.

Table 20

Table 20 is the regular trend table of marriages and marriage rates, which in this issue shows data for each year 1950-1959.

Unless otherwise specified, the statistics refer to formal marriages performed, that is, to the legal union of persons of opposite sex, the legality of which may be established by civil, religious or other means recognized by the law of each country. They are statistics of marriages, not of persons marrying.

In accordance with the usual practice, the quality code (C, U and . . .) is presented in the first column of the table and, in addition, data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Marriages and crude rates are shown for 158 geographic units. Major areas, though lacking recent data, are included and data for sub-national segments of population are presented when statistics are not available for the country as a whole. Such data are of minor significance, but they do serve to designate the areas for which marriage statistics are obtainable on a national basis. Since rates based on very small numbers are subject to large errors, a few areas showing frequencies consistently less than 15 are excluded.

[49] Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death; 6th revision of the International Lists of Diseases and Causes of Death, adopted 1948, Vol. I (World Health Organization, *Bulletin,* Supplement 1), Geneva, 1948.

Rate computation: The rates in Table 20 are the number of marriages reported per 1,000 persons present in the same area at the mid-point of the year in question. The populations are official figures and usually those presented in Table 4. Every effort was made to achieve strict correspondence between the numerator of the rate (marriages) and the denominator (population), and notes are used to describe instances where correspondence could not be obtained.

Limitations: Data in this trend table are subject to almost all the limitations of vital statistics set forth on p. 23, as well as those pointed out in connexion with marriage statistics specifically. They suffer from national variations in statistical definitions; they are deficient as indicators of *de facto* family formation to the extent that consensual unions exist; even as measures of formal marriage incidence, they are unreliable to the extent that they are incomplete. However, it must be emphasized that since marriage is a legal rather than a biological event, the problem of comparability in the sense of complete and incomplete takes on a somewhat different aspect. This should be borne in mind in using the quality-of-data code C and U, which appears in the first column of the table.

High incidence of consensual unions will be especially noticeable in the rates, because the range of formal marriage rates is relatively narrow and marked divergence is almost always due to a preponderance of *de facto* rather than *de jure* unions. Lack of comparability from this factor is especially evident in abnormally low marriage rates for parts of Latin America and Africa.

As will be seen from the footnotes, strict correspondence between the numerator of the rate and the denominator is not always obtained; for example, marriages among civilian and military segments of the population may be related to civilian population. The effect of this may be to increase the rates or, if the population is larger than that from which the marriages are drawn, to decrease them but, in most cases, it is probably negligible. The potential size of the effect may be judged from the rate series for Guam.

The symbol (†) is used here, as elsewhere in the *Demographic Yearbook,* to indicate that data have been tabulated by date of registration, rather than by date of occurrence or performance, in this case. As was pointed out on p. 00, this qualification is not particularly important in connexion with marriages because, in most cases, registration is performance. However, since there are some countries in which a potential time interval may exist between performance of a marriage and its registration,[50] the implications of the symbol should be considered in relation to the data it qualifies.

Finally, it should be emphasized that crude marriage rates—like crude birth and death rates—are not probability indices, because they take no cognizance of the age-sex-marital-status structure of the populations to which they relate. Nevertheless, they do measure levels and changes in marriage frequency. For more details on the uses of crude marriage rates, see Chapter I of the 1958 *Demographic Yearbook.*

[50] See *Handbook of Vital Statistics Methods, op. cit.,* Table 10, pp. 84-86.

Table 21

Marriages classified by age of bride and separately by age of groom are set forth in Table 21 for the latest year available. This table, showing the age characteristic of persons marrying, will bring up to date the 10-year trend shown in the 1958 *Demographic Yearbook.*

Age is defined as completed years at last birthday, in accordance with the United Nations' recommendations.[51] The age classification is that recommended by the United Nations,[52] modified to conform to limitations of space; categories included are 12 in number, namely, Under 15 years, 5-year age groups to 59, 60 and over, and unknown. Contrary to practice in prior years, the same classification is used for both brides and grooms.

Data believed to be unreliable (incomplete) as determined by the quality code (see p. 23) are set in italics rather than in roman type. If incompleteness is assumed to be evenly distributed throughout the age span, then such data may still be of value as indicators of the age pattern of marriages, even though the absolute levels may be deficient.

Coverage: Table 21 includes marriages by age of bride and groom for 112 geographic areas. Data for sovereign and non-self-governing territories are included so long as the distribution totalled at least 50 marriages. Major countries are shown even though figures for recent years are lacking, and data for ethnic segments of the population are presented when statistics are not available for the whole population.

Limitations: All the limitations of vital statistics and of marriage statistics in particular influence comparability of data in Table 21. As in Table 20, the definition of marriage is assumed to be formal, recognized unions, entered into according to the law of each country. Deviations from standard are footnoted; they include marriage licences issued, marriages recorded in church registers only, inclusion of marriages resumed after a separation and so forth.

Limitations are also imposed by the factor of age. Age-reporting errors have been described on p. 17 in connexion with censuses of population. It is probable that biases are less pronounced in marriage statistics, because information is obtained from the persons concerned and, being a legal act, the registration of marriage is apt to be performed correctly. However, in some countries, there appears to be an abnormal concentration of marriages at the national legal age for marriage, indicating perhaps an overstatement in some cases to comply with the law. Other factors which may influence age reporting at older ages include an inclination to understate the bride's age in order that it may be equal to or less than that of the groom.

Inter-area comparability of the lower age groups, i.e., up to 24 years, may also be limited by the variation in the minimum legal age for marriage. Information is not available for all countries and, even for those for which data are at hand, there is confusion as to what is meant by minimum age for marriage. In some cases, it appears to mean age below which marriage is not valid without

[51] *Principles for a Vital Statistics System, op. cit.,* Principle 309 (c) (1).
[52] *Ibid.,* Principle 410 (e) (23).

consent of parents or other specified persons; in others, it is the age below which valid marriage cannot be performed, irrespective of consent. There is also the factor of extenuating circumstances in many cases. Because of the variation in this matter, steps have been taken by the United Nations[53] to study the advisability of establishing an international standard minimum age for marriage. No age has been agreed upon, but it would likely be around 16 years for brides.

Limitations implied by the code of completeness attached to Table 20—but applicable as well to this table—warrant some consideration although, as explained above, the meaning of the codes in connexion with marriage registration is not always clear. The limitations imposed by date-of-registration tabulation procedures can be largely ignored in evaluating data in Table 21.

Table 22

Table 22 is the regular trend table of divorces and crude divorce rates, which this year shows data for each year 1950-1959.

Unless otherwise described, data refer to final dissolutions of marriage by decree of divorce within the present geographic boundaries and among the present-in-area population. They are decrees granted, not persons divorced.

In accordance with the usual practice, the quality code (C, U and . . .) is presented in the first column of the table and, in addition, data believed to be unreliable (incomplete) or of unknown reliability are set in italics rather than roman type. A description of the basis for this quality specification may be found on p. 23.

Coverage: Annual figures are shown for 101 geographic areas. Major countries are included even though recent data are not available; data for sub-national population segments are also included if national figures are lacking. This policy serves to provide information not only on divorce incidence but on the practices of countries in respect of compiling divorce statistics. Areas where there is no legal provision for divorce are noted in the table.

Rate computation: Rates in Table 22 are the number of divorce decrees granted per 1,000 persons present in the same area at the mid-point of the year in question. In a few cases, a census figure or an estimate for some other date within the year is used for lack of a midyear value. The populations, midyear or other, are official figures and usually those presented in Table 4.

Limitations: Comparability of divorce statistics is limited by several of the factors described in connexion with vital statistics in general and divorce statistics in particular (see p. 23 and 25). Statistics of divorces may in fact include annulments and/or legal separations, depending on the classification and tabulation procedures employed. If divorces are few, statistics will probably not be available separately.

Since divorce statistics originate in court records and procedures, the year-to-year fluctuations are likely to reflect court delays and clearances rather than trends in divorce incidence. Moreover, they tend to reflect also the ability of persons to acquire a divorce, including the laxness or stringency of the grounds on which divorce can be granted and the ability to meet financial and other costs of the court procedures. Connected with this aspect is the influence of certain religious faiths on the incidence of divorce. For all these reasons, divorce statistics are not strictly comparable as measures of family dissolution by legal means.

The effect of completeness on divorce statistics depends to a large extent on the type of the statistics; for a detailed discussion of this aspect, see the 1958 *Demographic Yearbook,* p. 19.

Divorce rates as comparable indices over space or time have the same limitations as any crude rate. Comparability of the basic data is limited by national differences in definitions and concepts due to the legal variations reviewed above. Regulations governing divorce procedures and variations in the type of data to which divorce statistics relate are other sources of noncomparability. For example, inclusion of annulments in the numerator of the rates produces a negligible effect, but inclusion of legal separations may have a measurable effect on the level of the rate.

Crude rates of divorce—like corresponding crude birth, death and marriage rates—are not probability indices. They are rather indicators of the gross additions to the marriageable population and deletions from the married segment; in that capacity, they are extremely useful even though not strictly comparable from area to area. But because of basic differences in the marital status and age composition of populations, they do not measure the risk of divorce among married persons or couples. They give only a general idea of the trends over time and the gross differences between countries in levels of divorce in the total population, limited always by the international variations in the meaning of the term "divorce".

Table 23

Table 23 gives the expectation of life ($\mathring{e}_x$) or the average number of years of life remaining for males and females reaching the ages specified.

This table shows values from the latest available life table—complete or abridged. Male and female expectations are shown separately for selected ages beginning at birth (age 0) and proceeding with age 1, 2, 5, 10, 15, 20, 30, 40, 50, 60, 65 and 70 years.

Data are shown to the number of digits provided in the official computation, thus producing a mixture of one and two decimal values.

Coverage: Values are available in Table 23 for 78 geographic areas. Lack of reliable base data restricts the number of areas for which life tables have been constructed but, even so, the coverage has increased notably in the last few years. Where national data are not available, values for sub-national areas—such as cities or provinces—are shown.

Limitations: The accuracy of a life table depends mainly upon the completeness of the registration of deaths and the accuracy of the enumeration of the population by age at the census. The effect of these factors has been explored in the 1957 *Demographic Yearbook,* pp. 40-41.

The expectation-of-life values presented in Table 23

[53] *Official Records of the Economic and Social Council, 26th Session, Supplement No. 1* (E/3169), resolution 680 B (XXVI).

are based on the mortality rates of the life table; they are, therefore, subject indirectly to all the deficiencies of the base data. Their interpretation also must be strictly in terms of the assumption that surviving cohorts (for whom expectation of life is estimated) will continue to be subjected to the age-specific mortality rates of the period to which the life table refers, and not to future mortality patterns—whatever these may be. Thus, in interpreting $\mathring{e}_{50}$ in the 1951-1955 life table for Norway it may be said that, if males reaching age 50 were to experience for the rest of their lives the same age-specific mortality rates that obtained during the period 1951-1955, they would, on the average, live 26.6 years past the age of 50 or to 76.6 years of age.

CHAPITRE 1. *CE QUE NOUS SAVONS DE L'ETAT ET DE L'EVOLUTION DE LA POPULATION MONDIALE*

Au milieu de 1959, la population mondiale était estimée à 2 907 millions, soit une augmentation de 412 millions par rapport à l'estimation établie pour le milieu de 1950[1]. S'ils sont exacts, ces chiffres prouvent que de 1950 à 1959 la population mondiale a augmenté à raison de 1,72 pour 100 par an, en moyenne; en valeur absolue, la moyenne arithmétique de l'accroissement annuel s'établirait actuellement aux environs de 46 millions. Mais on peut se demander si les estimations dont on est parti sont suffisamment exactes. Il convient donc de connaître la marge d'erreur pouvant exister dans les estimations mondiales et régionales.

METHODE D'ANALYSE

Il est impossible de répondre de manière précise à ces questions car dans la plupart des cas on ne sait pas exactement dans quelle mesure les données ayant servi à établir les estimations pour les divers pays sont sûres. Toutefois, on peut se faire une idée de l'ordre de grandeur des erreurs possibles en analysant les méthodes utilisées pour établir les estimations de la population des différents pays[2].

La majorité des pays fournissent à l'ONU des estimations démographiques courantes, en réponse à un questionnaire où sont également demandés certains renseignements sur les méthodes d'estimation. Les données consignées sur le questionnaire et le cas échéant celles qui proviennent d'autres sources ont permis de classer la plupart des estimations courantes d'après leur mode d'établissement. Les résultats de cette classification sont présentés sous forme d'un code qui accompagne les chiffres de population publiés dans le tableau I du présent *Annuaire* (voir page 99) ainsi que dans les numéros trimestriels du *Population and Vital Statistics Report*[3].

Toute estimation de population repose généralement sur deux éléments fondamentaux : a) les "données de base", c'est-à-dire les résultats d'un recensement ou tous autres renseignements concernant la dimension de la population à un moment déterminé du passé et b) "l'ajustement chronologique", c'est-à-dire l'estimation de l'accroissement positif ou négatif de la population survenu depuis la date à laquelle se rapportent les données de base. Le code utilisé pour classer les estimations comprend ces deux éléments ainsi que deux autres qui se rapportent à l'âge des données de base et à la qualité apparente de l'ajustement chronologique. On trouvera les signes conventionnels du code ainsi que des explications complètes sur les notations employées à la page 66 du chapitre II mais pour plus de commodité on en a donné ci-dessous un bref résumé.

I. Nature des données de base
- **A** – Recensement complet
- **B** – Recensement ou enquête par sondage
- **C** – Recensement ou enregistrement partiels, comptage annuel
- **D** – Estimations conjecturales
- **. .** – Nature des données de base inconnue.

II. Age des données de base
Indice numérique suivant le premier élément du code et indiquant, à l'année près, l'âge des données de base.

III. Méthode d'ajustement chronologique
- **a** – Ajustement d'après un registre de population permanent
- **b** – Ajustement d'après l'équation d' équilibre (solde des naissances, des décès et de la migration nette)
- **c** – Ajustement d'après un taux d'accroissement présumé
- **d** – Pas d'ajustement; base constante pour au moins deux années consécutives
- **x** – Ajustement d'après des estimations de populations régionales
- **. .** – Méthode d'ajustement inconnue

IV. Qualité de l'ajustement chronologique :
- i) Ajustement pour les types **a** et **b**
  - 1 – Balance démographique sûre
  - 2 – Balance démographique de qualité inconnue
  - 3 – Balance démographique non sûre
- ii) Ajustements pour le type **c** :
  - 1 – Au moins deux recensements, à intervalle de dix ans ou moins
  - 2 – Au moins deux recensements, l'intervalle entre les deux derniers étant de plus de dix ans
  - 3 – Un ou zéro recensement.

Le quatrième élément du code qui traduit la qualité de l'ajustement chronologique concerne directement l'exactitude de l'estimation de population. Lorsque les estimations courantes sont établies à partir des statistiques de la natalité et de la mortalité et éventuellement des migrations internationales, la balance des augmentations et diminutions est considérée comme sûre si même avec une combinaison extrême d'erreurs dans les quatre éléments de la balance – naissances, décès, immigration et émigration enregistrés – l'erreur globale ne dépasse

[1] Voir page 118.

[2] Les méthodes utilisées pour calculer les estimations de la population au milieu de 1955 ont été analysées dans le chapitre I de l'*Annuaire démographique* de 1956.

[3] *Population and Vital Statistics Report.* Séries A, Vol. XIII, No 1: (Publication de l'Organisation des Nations Unies, ONU, New York.)

probablement pas 5 pour 1 000 pour une année. L'exactitude de l'enregistrement des naissances et des décès a également une certaine importance; des renseignements sont souvent fournis à ce sujet dans le questionnaire, sinon on les tire parfois d'autres sources. Dans certains cas, le degré d'exactitude des estimations à la date du dernier recensement fournit également une indication utile. Lorsqu'elles satisfont à toutes ces conditions, les estimations sont affectées de la notation "1" ou "3". Toutefois, dans bien des cas, il est impossible de déterminer de façon précise la qualité de l'ajustement chronologique reposant sur cette méthode; on a alors utilisé la notation "2".

Les ajustements chronologiques reposant sur des taux présumés[4] de l'accroissement de population ne tiennent pas compte des fluctuations annuelles du taux réel d'accroissement de la population et ne peuvent donc pas être considérés comme absolument sûrs, quelle que soit la manière dont les taux présumés ont été calculés. Les estimations du type **c** comportent un élément subjectif dont l'incidence est réduite lorsque des recensements ont été effectués à des intervalles assez réguliers; en conséquence, la périodicité et la fréquence des recensements permettent d'apprécier la valeur probable des ajustements chronologiques de ces types.

La qualité des estimations dépend également de l'âge des dernières données de base fournies par les recensements ou autrement. Plus il s'est écoulé de temps depuis que les dernières données de base ont été établies, plus grandes sont les erreurs qui risquent d'entacher d'ajustement chronologique.

Il est non moins évident que l'exactitude des estimations courantes dépend de celles des données de base. Quoiqu'ils présentent de grandes différences, les recensements complets fournissent en général pour la population totale des chiffres plus exacts que ne le font les recensements ou enquêtes par sondage, lesquels à leur tour donnent des résultats généralement plus sûrs que ceux qui sont fournis par les autres méthodes utilisées pour déterminer le chiffre de la population à la date de référence. Les lettres **A, B, C** et **D** qui constituent le premier élément du code sont donc dans l'ordre décroissant de la valeur probable des estimations. Les différences existant dans l'exactitude des données de base de chaque type sont toutefois considérables. Il est regrettable que l'on cherche encore trop rarement à déterminer l'importance de l'erreur dans les données de base par des méthodes telles que les sondages post-censitaires de vérification. En conséquence, on ne peut pas encore évaluer assez systématiquement aux fins de codage la qualité des données de base, c'est-à-dire des chiffres de population des divers pays. C'est essentiellement pour cette raison que le code utilisé ne fournit qu'une indication, et non une mesure précise, de la valeur des estimations courantes.

Bien que le code ne traduise qu'imparfaitement le degré d'exactitude des estimations, ses éléments donnent une idée de leur valeur. L'analyse ci-après repose donc sur ce code; on a d'abord étudié les estimations relatives à quatre grands pays, ensuite les méthodes employées pour le reste de la population mondiale; enfin, on a réuni les conclusions de ces deux séries d'études pour aboutir à une évaluation des données relatives à la population mondiale.

[4] Il s'agit généralement de taux constants, mais on a admis aussi des accroissements annuels constants en valeur absolue. Dans ce cas, l'hypothèse conduit à des taux d'accroissement qui varient en fonction du temps selon une formule mathématique.

LES QUATRE POPULATIONS LES PLUS NOMBREUSES

La moitié environ de la population du globe telle qu'elle figure à l'annexe I est répartie entre quatre pays : la Chine (continentale), l'Inde, l'Union des Républiques socialistes soviétiques et les Etats-Unis d'Amérique. Voici, d'après les estimations de 1959, la part estimative de ces quatre pays dans la population des principales régions du globe :

	Population totale [a]	*Population des quatre pays principaux*	*Différence*
Total mondial ..	2 901 834 000	1 459 800 000	1 442 034 000
Afrique	246 700 000	.	246 700 000
Amérique du Nord	259 673 000	177 700 000	81 973 000
Amérique du Sud	135 995 000	.	135 995 000
Asie	1 612 317 000	1 071 600 000[b]	540 717 000
Europe	421 290 000	.	421 290 000
Océanie	15 359 000	.	15 359 000
URSS	210 500 000	210 500 000	.

[a] Ces totaux, obtenus par addition des estimations relatives aux différents pays qui figurent à la page 56 de l'annexe I, diffèrent légèrement des chiffres qui figurent à la page 118, du fait que ces derniers ont été corrigés pour compenser les erreurs par excès ou par défaut des chiffres nationaux et pour tenir compte des populations non comprises dans les chiffres nationaux.

[b] L'estimation relative à la Chine date de 1958.

Il est évident que la valeur des estimations de la population mondiale dépend dans une très large mesure de l'exactitude des chiffres que l'on possède sur la population de ces quatre pays.

DONNEES DE BASE

Ces quatre populations sont maintenant estimées à partir des résultats des recensements suivants : Etats-Unis, 1950; Inde, 1951; Chine (continentale), 1953; URSS, 1959. Aux Etats-Unis et en Inde, on a procédé à des recensements tous les dix ans, les années se terminant par 0 et par 1; ainsi, les Etats-Unis ont recensé leur population le 1er avril 1960 et l'Inde, le 1er mars 1961. Tant qu'on ne connaîtra pas les résultats de ces deux derniers recensements, la situation sera la suivante : renseignements très récents pour l'URSS, assez récents pour la Chine (continentale) et moins récents pour l'Inde et les Etats-Unis.

Aux Etats-Unis, le recensement de 1950 a été suivi par une vérification par sondage effectuée sur le terrain pour contrôler l'exactitude du dénombrement. Un sous-dénombrement net de 1,3 pour 100 a ainsi été décelé. Pour le recensement indien de 1951, un sondage de contrôle a fait apparaître un sous-dénombrement net de 1,1 pour 100. Mais ni l'une ni l'autre de ces méthodes de contrôle ne peut être parfaitement exacte. Une contre-vérification a révélé aux Etats-Unis que la première vérification n'avait pas permis de découvrir toutes les omissions; il semble donc qu'on puisse raisonnablement penser que le sous-dénombrement net dans les recensements indien et américain a dû se situer entre 1 et 1,5 pour 100.

On ne peut encore évaluer avec autant de précision l'exactitude du dernier recensement soviétique, parce qu'aucun résultat des opérations de contrôle effectuées sur le terrain n'a encore été publié. La préparation soigneuse des recensements et la riche expérience dont les statisticiens soviétiques pouvaient déjà disposer, ainsi que le fait le dénombrement définitif a été précédé d'enquêtes pilotes et de recensements d'essai permettent de penser que ce recensement n'a pas été moins exact que ceux de l'Inde et des Etats-Unis. La concordance entre les résultats du recensement soviétique et les estimations antérieures ne peuvent que confirmer la présomption d'exactitude. La population avait été estimée à 200 200 000 en avril 1956 et les statistiques de l'état civil publiées font apparaître un accroissement annuel de 1,75 pour 100. A ce taux, au 15 janvier 1959, la population aurait été de 209,8 millions, c'est-à-dire seulement 0,5 pour 100 de plus que le chiffre donné par le recensement pour la même date (208,8 millions). En admettant que les conditions d'exactitude aient été les mêmes qu'en Inde et qu'aux. Etats-Unis, il y aurait un sous-dénombrement net de 1,5 pour 100 au maximum. Dans le cas du recensement soviétique, il n'y a toutefois aucune preuve concrète d'un sous-dénombrement net. C'est pourquoi on peut raisonnablement penser que la marge d'erreur pour le total est comprise entre 0 et –1,5 pour 100.

Il est beaucoup plus difficile de juger le recensement chinois de 1953. Une vérification par sondage sur le terrain aurait révélé des omissions s'élevant à 0,25 pour 100 et des doubles comptes de 0,14 pour 100, soit un sous-dénombrement net de 0,11 pour 100 seulement. Il est néanmoins probable que l'erreur vraie a été beaucoup plus importante. Une exactitude comme celle que semblent impliquer les résultats de la vérification chinoise n'est guère concevable même dans les pays où les conditions de recensement sont presque idéales; il semble improbable que de tels résultats aient pu être atteints dans les conditions existant en Chine, car il s'agissait alors du premier recensement moderne entrepris dans un pays vaste, manquant de cartes géographiques et ayant une énorme population en grande partie analphabète et sans tradition de statistiques sérieuse. Le recensement de 1953 n'a toutefois pas été confié uniquement à des enquêteurs; dans de grandes parties du pays, il semble que le dénombrement ait été exécuté dans des bureaux d'enregistrement où tous les habitants de la région devaient se présenter. Il se peut que les moyens mis en œuvre pour assurer l'enregistrement aient été relativement efficaces, mais il faut s'attendre à quelques inexactitudes, ne serait-ce qu'en raison de la durée des opérations de recensement : au cours de cette période de plusieurs mois, les naissances, les décès, les migrations et les défaillances de la mémoire ont dû produire des erreurs qu'il n'a pas été facile de corriger par la suite. De plus, il semble que dans certaines parties du pays il n'ait pas été possible de mener à terme le recensement et qu'on ait dû recourir à des estimations basées sur les documents déjà existants. Il est difficile de dire si la tendance a été au sous-dénombrement ou au surdénombrement; dans un pays aussi vaste, les conditions ont dû varier selon l'endroit et certaines des erreurs ont pu se compenser. La population totale a été estimée à 575 millions pour 1952, soit 8 millions de moins seulement que le total au recensement de 1953; mais l'estimation de 1952 a pu être entachée d'erreurs du même genre que celles qui ont dû se produire en 1953 et il est de ce fait douteux que ces deux chiffres puissent être considérés comme entièrement indépendants l'un de l'autre. C'est pourquoi, sans écarter la possibilité que le chiffre de la population totale fourni par le recensement de 1953 ait été proche de la vérité, on doit admettre que les renseignements disponibles n'excluent pas la possibilité d'une erreur importante. D'après l'expérience des recensements qui ont eu lieu dans d'autres parties du monde, où les conditions se rapprochent de celles de la Chine à certains égards, il semble qu'on puisse, en l'occurrence, fixer la marge d'erreur à ± 5 pour 100.

De ce fait, la population des Etats-Unis en 1950 a dû se situer entre 153 et 154 millions de personnes; celle de l'Inde en 1951 entre 365 et 367 millions; celle de la Chine (continentale) en 1953 entre 553 et 612 millions; celle de l'URSS en 1959 entre 209 et 212 millions.

AJUSTEMENT CHRONOLOGIQUE

Pour les Etats-Unis, les estimations de population sont établies par extrapolation, sur la base des statistiques de la natalité, de la mortalité, de l'immigration et de l'émigration. Il est reconnu que les statistiques de l'état civil sont presque complètes, sans toutefois l'être absolument; il faut donc corriger les omissions éventuelles. Il est probable que les mouvements migratoires s'effectuant par voie aérienne ou maritime sont enregistrés avec une grande exactitude, mais quelques mouvements non enregistrés — clandestins ou autres — peuvent se produire à travers les frontières terrestres. Tout considéré, il semble probable que la balance calculée tient compte de 95 à 100 pour 100 de l'accroissement réel de la population.

Pour l'URSS, les chiffres dont on dispose démontrent qu'il est possible de calculer au moins l'excédent des naissances sur les décès enregistrés. Il est probable en tout cas que les migrations internationales sont relativement peu importantes. Vu la longue pratique soviétique et le souci de la rationalisation, il est probable que la balance calculée, c'est-à-dire le résultat du mouvement de la population depuis la date du recensement, n'est guère moins exacte qu'aux Etats-Unis. Il est donc probable qu'il a été tenu compte en Union soviétique de l'accroissement de la population dans une proportion de 95 à 100 pour 100.

La situation est moins satisfaisante en Inde, où les statistiques de la mortalité et de la natalité sont très incomplètes. Pour établir les estimations annuelles, on a supposé que le taux moyen d'accroissement de la population observé entre les recensements de 1941 et de 1951, soit 1,31 pour 100, est resté inchangé. En fait, il est probable qu'il y a eu une accélération sensible de l'accroissement après 1951, à cause de la baisse de la mortalité. De plus, l'accroissement de la population entre 1941 et 1951 a été quelque peu retardé par des famines locales survenues pendant la guerre et des déplacements massifs de population après la guerre. D'après une projection démographique récente[5], il est probable que le taux d'accroissement naturel a atteint 1,72 pour 100 en 1956, et pourrait arriver à 2,09 pour 100 en 1961. Pour cette projection, il a été tenu compte des effets probables

[5] A. Coale et E. Hoover, *Population Growth and Economic Development in Low-Income Countries*, Princeton, N.J., USA. 1958. Tableau 6, p. 38.

des programmes antipaludiques, ainsi que d'autres mesures de santé publique qui ont été prises. Le taux annuel moyen en 1951-1958 a été probablement de l'ordre de 1,7 pour 100, sinon plus, au lieu de 1,31 pour 100. Etant donné l'importance de la marge d'incertitude, on peut estimer qu'un taux moyen d'accroissement de 1,5 à 1,75 pour 100 est plausible pour la période 1951-1958. Au cours de ces 7 années, l'augmentation de la population a donc dû être comprise entre 11,0 et 12,2 pour 100 mais il est fort probable qu'elle a été supérieure aux 9,6 pour 100 indiqués dans les estimations officielles.

La marge d'incertitude est encore plus importante en ce qui concerne l'augmentation de la population de la Chine (continentale). Les estimations de la population totale ont, du moins pour 1954 et 1955, été établies à partir des rapports annuels des administrations provinciales et municipales. Le chiffre de 1956 est une estimation provisoire partiellement basée sur des approximations grossières, du fait que certains des rapports locaux n'avaient pas encore été reçus au moment de la publication du chiffre de la population totale. Il est évident que le chiffre rond de 669.000.000 pour 1958 est une approximation du même type. De plus, on ne connaît pas les méthodes de mise à jour des estimations provinciales et municipales. Il est probable que, comme les procédés de recensement eux-mêmes, ces méthodes ont considérablement varié selon l'endroit, et qu'elles ont pu aller depuis l'enregistrement continu et assez efficace jusqu'à l'adoption d'hypothèses très approximatives; en tout cas, on ne sait pas quelle a été la méthode la plus employée. De ce fait, on peut s'attendre à une importante marge d'erreur; pour une récente projection de population[6], on a supposé que les taux d'accroissement annuel pour la période 1953-1958 étaient compris entre 1,5 et 2,2 pour 100.

ESTIMATIONS POUR 1959

Sur la base des valeurs limites indiquées ci-dessus pour les résultats de recensement et pour les facteurs d'ajustement chronologique, on peut considérer qu'au milieu de 1955 la population des quatre pays les plus peuplés était comprise entre les chiffres suivants :

	Millions
Chine (continentale)	605 — 697
Etats-Unis	178 — 181
Inde	413 — 424
URSS	211 — 214

La somme des valeurs limites est donc égale à 1 407 et à 1 516 millions respectivement mais, étant donné qu'il est peu vraisemblable que dans les quatre cas le chiffre de population soit égal à l'une des valeurs extrêmes, on peut considérer que les limites de 1 416 et 1 508 millions sont tout à fait acceptables pour l'agrégat[7].

TAUX D'ACCROISSEMENT POUR 1950-59

En appliquant la même méthode aux estimations établies pour le milieu de 1950, on peut admettre que les taux d'accroissement probable de la population au cours de la période 1950-1959 sont compris entre les valeurs ci-après :

	Taux d'accroissement annuel moyen pour 1950-59 Pourcentage
Chine (continentale)	1,2 — 2,3
Etats-Unis	1,7 — 1,8
Inde	1,5 — 1,7
URSS	1,7 — 1,8

Pour l'ensemble de ces quatre pays, le taux d'accroissement au cours de la période 1950-59 se situerait entre 1,5 et 2,0 pour 100 par an. Dans l'Inde, c'est vraisemblablement à un nouveau déclin de la mortalité qu'il faut attribuer l'accélération de l'accroissement de la population au cours de ces dernières années. Il est également probable qu'en Chine (continentale), l'accroissement récent de la population a été plus rapide que le taux moyen estimatif de la période 1950-59 ne semble l'indiquer. Toutefois, il est pratiquement impossible à l'heure actuelle d'établir une estimation plus précise du taux courant d'accroissement de la population de ces pays.

RESTE DE LA POPULATION MONDIALE

En ce qui concerne le reste du monde [c'est-à-dire tous les pays autres que l'URSS, les Etats-Unis, la Chine (continentale) et l'Inde], les renseignements actuels sur la qualité des données démographiques ne permettent pas de procéder, comme on l'a fait pour les quatre populations les plus importantes, à une évaluation des estimations pays par pays. On se bornera donc à une analyse plus sommaire pour les autres pays; on utilisera essentiellement le code relatif au type d'estimations ainsi que des formules approximatives indiquant la marge d'erreur propre aux estimations de chaque type.

La présente analyse se rapporte aux estimations de la population au milieu de 1959, qui figurent au tableau 1 (page 99) et qui sont rangées par ordre décroissant à l'annexe I (page 56). Lorsque l'on ne disposait pas d'une estimation pour le milieu de 1959, on a utilisé si possible une estimation se rapportant à une autre date que 1959. En ce qui concerne les Etats Membres de l'ONU qui n'ont pas établi d'estimations pour 1959, on a indiqué en note la dernière estimation disponible — quelle que soit la date à laquelle elle se rapporte — ainsi que le code correspondant. Pour quelques populations, généralement peu nombreuses, le Secrétariat de l'ONU a établi des estimations non officielles en attendant de recevoir les chiffres officiels; en pareil cas, les données de base ont été codées selon le système habituel et, pour la méthode d'ajustement chronologique, on a utilisé l'annotation **x** qui est décrite à la page 68. Lorsque la méthode d'ajustement chronologique utilisée pour établir une estimation officielle n'était pas connue ou qu'elle n'avait pas un caractère systématique permettant de lui attribuer un code simple, on a employé le code ". .". Dans trois cas seulement, le type des données de base est inconnu[8]; en l'occurrence, on a fait figurer trois points de suspension (. . .) dans la colonne du code. Dans l'analyse ci-après, on a utilisé les codes décrits plus haut et, en cas de besoin, les codes indiqués dans les notes de l'annexe.

[6] *La Population de l'Asie et de l'Extrême-Orient, 1950-1980.* ST/SOA/SER.A/31. Publication de l'Organisation des Nations Unies, No de vente : 59.XIII.3.

[7] Théoriquement, le total des erreurs indépendantes est égal à la racine carrée de la somme des carrés de chaque erreur.

[8] Il s'agit de la Somalie, de Saint-Marin et de la Cité du Vatican, qui comptent au total 2 007 000 habitants.

Tableau A. Population estimée au milieu de 1959, selon le type des données de base utilisées pour établir les estimations

Type des données de base	*Total mondial*[a]	*Afrique*	*Amérique du Nord*[a]	*Amérique du Sud*	*Asie*[a]	*Europe*	*Océanie*
			Population en millions				
Tous types	1 441	246	82	136	541	421	15
A (recensement)	1 121	148	80	136	323	421	13

[a] Total mondial non compris la Chine (continentale), les Etats-Unis, l'Inde et l'URSS. Amérique du Nord non compris les Etats-Unis. Asie non compris la Chine (continentale) et l'Inde.

DONNÉES DE BASE

Le tableau A donne les chiffres de la population estimée — non compris les quatre populations les plus importantes, dont il a déjà été question — avec répartition selon le type des données de base utilisées pour établir les estimations. Pour la grande majorité de la population mondiale, les renseignements actuellement disponibles proviennent de recensements complets des individus (type **A**)[9], mais une fraction importante est encore estimée à partir des résultats de recensements ou enregistrements partiels ou encore de comptages annuels des habitants (type **C**).

Il est à noter que la répartition qui se reflète dans les pourcentages ci-dessus n'est pas uniforme d'un continent à l'autre. Presque toutes les estimations concernent l'Amérique et l'Europe mais moins des deux tiers de celles qui se rapportent à l'Afrique et à l'Asie — non compris l'Inde et la Chine (continentale) — ont été établies sur la base de recensements. Pour un cinquième environ des populations d'Afrique et d'Asie, les chiffres ont été calculés à partir des résultats soit de "comptages" annuels soit de recensements ou enregistrements partiels.

Certaines des données en question sont récentes, d'autres assez anciennes. Au moment où la présente étude a été rédigée, les recensements les plus récents étaient ceux de l'URSS (dont il n'est pas tenu compte ici) et de l'Ouganda. Certaines données de base de source différente, provenant par exemple d'enquêtes par sondage, de rôles d'impôts ou de registres électoraux, sont également assez récentes. Par contre, le dernier recensement effectué en Uruguay remonte à 1908.

Dans le tableau B, les estimations sont classées selon la date d'établissement des dernières données de base. Pour le "total mondial" — qui ne comprend pas les quatre populations les plus importantes — les fréquences les plus élevées sont celles des années 1950, 1951, 1955 et 1956. S'il en est ainsi, c'est dans une large mesure parce que, conformément aux recommandations internationales, les pays ont l'habitude de faire au moins un recensement tous les dix ans, de préférence au cours des années se terminant par 0 ou 1 et aussi parce que certains d'entre eux (par exemple le Canada, le Japon, la Nouvelle-Zélande et la Turquie) ont coutume d'en effectuer un tous les cinq ans. En outre, les chiffres de 1956 sont élevés parce que le recensement de l'habitation effectué en Allemagne occidentale était en fait un recensement de la population qui a fourni une nouvelle base pour les estimations courantes de la population et que des recensements partiels ont eu lieu au cours de l'année en question, dans les territoires français d'Afrique.

Les données du tableau B sont résumées dans le tableau C. Compte non tenu des chiffres concernant les quatre populations les plus importantes, les statistiques ayant servi à établir les estimations de la population mondiale pour 1959 ont en moyenne 6,2 ans, l'âge moyen des données provenant des recensements étant 7,0 ans et celui des autres données (fournies par les enquêtes par sondage, les recensements partiels, les comptages non censitaires et les estimations conjecturales) 3,5 ans. A l'heure actuelle, les données de base relatives à l'Amérique et à l'Europe sont relativement les plus anciennes mais celles qui concernent l'Afrique, l'Asie et l'Océanie sont dans l'ensemble plus récentes.

[9] Lorsque l'on inclut dans la population mondiale les quatre populations les plus importantes, le pourcentage des estimations de population reposant sur des recensements passe à 90 pour 100 environ.

Tableau B. Population estimée au milieu de 1959, selon l'année d'établissement de données de base ayant servi à calculer les estimations courantes (millions)

Années d'établissement des données de base	*Total mondial*[a]	*Afrique*	*Amérique du Nord*[a]	*Amérique du Sud*	*Asie*[a]	*Europe*	*Océanie*

[a] Total mondial non compris la Chine (continentale), les Etats-Unis, l'Inde et l'URSS. Amérique du Nord non compris les Etats-Unis. Asie non compris la Chine (continentale) et l'Inde.

Compte tenu des recensements effectués en Chine (continentale), aux Etats-Unis, dans l'Inde et en URSS, l'âge moyen des données de base ayant servi à établir les estimations de la population mondiale est 5,9 ans. On disposera de données de base nouvelles lorsqu'on aura les résultats des recensements exécutés en 1960 et 1961 conformément aux recommandations internationales.[10]

[10] D'après les renseignements disponibles au 1er mars 1961, 61 recensements avaient été effectués en 1960.

Tableau C. Age moyen des données de base ayant servi à établir les estimations de la population au milieu de 1959 (années)

Autres types	3,4	2,0	6,0	...	4,1	4,0	4,6

[a] Total mondial non compris la Chine (continentale), les Etats-Unis, l'Inde et l'URSS. Amérique du Nord non compris les Etats-Unis. Asie non compris la Chine (continentale) et l'Inde.

Jusqu'à ce que l'on ait de nouvelles données de base, l'exactitude des estimations courantes ne cesse de diminuer avec le temps par suite de l'accumulation d'erreurs dans l'ajustement chronologique. Il ne faudrait pas en conclure toutefois que les estimations relatives à l'Afrique par exemple sont en général plus exactes que celles qui concernent l'Amérique ou l'Europe. Lorsqu'ils ont lieu à intervalles réguliers, les recensements ont des chances de fournir des résultats plus exacts que s'ils sont effectués sporadiquement ou pour la première fois. En outre, l'exactitude des estimations courantes diminue plus rapidement lorsque l'ajustement chronologique repose sur un taux hypothétique douteux que lorsqu'il a pour base des données exactes sur la natalité, la mortalité et les mouvements migratoires.

AJUSTEMENT CHRONOLOGIQUE

Le tableau D donne les chiffres de la population estimée, selon la méthode ayant servi à extrapoler les données de base à la date considérée. Dans un certain nombre de cas, notamment pour l'Afrique et l'Asie, on n'a pas de précisions sur les méthodes utilisées. Dans les cas où on a des indications suffisantes, on constate que le taux d'accroissement présumé (**c**) est employé presque aussi souvent que l'équation d'équilibre (**b**). L'utilisation de l'équation d'équilibre est très fréquente en Europe et en Océanie et assez répandu en Amérique du Nord. Par contre, dans la majorité des pays d'Amérique latine et d'Asie, ainsi que dans une fraction importante de l'Amérique du Nord, c'est le taux d'accroissement

Tableau D. Population estimée au milieu de 1959, selon la méthode d'ajustement chronologique utilisée pour établir les estimations

présumé qui est employé. Il est également très fréquent en Afrique bien que, dans ce continent, on rassemble de temps à autre les résultats des comptages effectués par les autorités locales, ce qui permet de mettre à jour les estimations au moyen de méthodes qui ne peuvent pas être classées selon un système simple.

[a] Total mondial non compris la Chine (continentale), les Etats-Unis, l'Inde et l'URSS. Amérique du Nord non compris les Etats-Unis. Asie non compris la Chine (continentale) et l'Inde.

Le tableau E donne des indications plus détaillées sur les méthodes d'ajustement chronologique pour lesquelles on dispose de renseignements (**a, b, c**). La différence entre le type **a** et le type **b** est la suivante : dans le cas d'un registre permanent de population, une fiche est établie pour chaque individu; de nouvelles fiches sont ajoutées à l'occasion des naissances et des entrées et d'autres fiches retirées à l'occasion des décès et des sorties; on peut donc établir directement une balance en comptant les fiches existantes. En raison du système de vérification et des recoupements qu'il comporte, ce procédé est plus exact que celui de l'équation d'équilibre de la balance des naissances, des décès et des mouvements migratoires enregistrés. Mais dans l'un et l'autre cas, le degré d'exactitude des données de base est très variable. L'indice numérique "1" signifie que l'erreur annuelle dans la balance démographique ne dépasse probablement pas 5 pour 1 000; lorsque l'erreur risque d'être supérieure ou égale à un chiffre, l'indice est "3". Lorsque l'erreur probable est inconnue, on emploie l'indice "2".

Le degré d'exactitude du taux d'accroissement présumé ne peut pas être établi objectivement car il comporte toujours un élément d'appréciation. Toutefois les estimations du type **c** ont pu être rangées par ordre de fiabilité décroissante sur la base de la fréquence et de la périodicité des recensements. Les estimations précédées de deux recensements — ou plus — effectués à des intervalles ne dépassant pas dix ans sont codées "$\mathbf{c}_1$" étant donné que, dans ces conditions, l'évolution passée permet de formuler des hypothèses sur une base relativement sûre. Lorsqu'il y a eu deux recensements — ou plus — mais que l'intervalle les séparant est supérieur à dix ans, on a employé la notation "$\mathbf{c}_2$". Dans les autres cas, l'évaluation repose généralement sur des éléments bien plus discutables et on a utilisé la notation"$\mathbf{c}_3$".

L'équation annuelle d'équilibre reflète plus ou moins fidèlement les variations de l'accroissement de la population d'une année à l'autre; mais il en va différemment lorsque les estimations sont établies au moyen d'un taux présumé. Dans le premier cas, on peut légitimement déduire les variations du taux d'accroissement des estimations de population. Mais partir d'estimations calculées au moyen de taux présumés revient à préjuger les conclusions.

L'agrégat le plus important du tableau E concerne l'Europe où les estimations sont mises à jour au moyen d'une équation d'équilibre appropriée des naissances, décès et mouvements migratoires. La même méthode est utilisée, quoique d'une manière plus limitée, en Asie (notamment au Japon), en Amérique et en Océanie. Compte tenu des Etats-Unis et de l'URSS, la méthode a été appliquée pour $\mathbf{b}_1$ 864 millions d'habitants.

L'ajustement au moyen de taux d'accroissement déduits des résultats de recensements périodiques ($\mathbf{c}_1$) est utilisé pour évaluer les populations importantes d'Asie et d'Amérique du Sud ainsi que les populations moins nombreuses d'autres continents. Etant donné que l'Inde recourt à ce procédé, la méthode $\mathbf{c}_1$ a été appliquée à 740 millions d'habitants.

Les registres permanents de population reposant sur un enregistrement exact sont employés dans certains pays de l'Europe du Nord-Ouest ainsi qu'en Chine (Taïwan). Dans la République du Viet-Nam, et en Syrie (province de la République arabe unie) on utilise également ce procédé pour ajuster chronologiquement les estimations; toutefois, il existe certaines lacunes dans les données enregistrées.

Une bonne partie de la population africaine a été estimée au moyen de taux présumés, mais, faute d'une série de recensements, ces taux reposent souvent sur des hypothèses très incertaines ($\mathbf{c}_3$). De même, dans le cas des populations africaines pour lesquelles on calcule une équation annuelle d'équilibre, les statistiques de l'état civil utilisées sont mauvaises ($\mathbf{b}_3$).

ESTIMATIONS POUR 1959

Dans quelques pays, on a commencé à vérifier l'exactitude des résultats des recensements et des statistiques de l'état civil par des contrôles sur le terrain. Cela n'a malheureusement été fait que dans un très petit nombre de pays. On peut également se rendre plus ou moins compte de l'exactitude des données démographiques en recalculant en balances intercensitaires ou en comparant des données plus sûres, par exemple les résultats d'un nouveau recensement, avec les estimations précédentes.

Il est impossible d'examiner une à une les estimations de population qui figurent en annexe, mais la documentation dont on dispose permet de se faire une idée approximative de leur exactitude générale. Pour ce faire, on peut attribuer à chaque élément des estimations d'un type donné[11] des marges d'erreur d'un ordre de grandeur considéré comme caractéristique; on peut ensuite combiner les erreurs des différents éléments au moyen d'une formule simple[12]. Il est alors possible d'additionner les marges d'erreur calculées pour chaque pays, en supposant que les diverses erreurs dans chacune des estimations se compensent partiellement, mais pas autant qu'elles le pourraient si elles étaient réparties au hasard[13].

Cette dernière hypothèse est rendue nécessaire par le fait que de nombreuses estimations sont probablement entachées d'erreurs similaires. Les comptages précédemment effectués en dehors des recensements se sont généralement révélés défectueux à la lumière du premier

---

[11] Pour les marges d'erreur, les ordres de grandeur suivants (en pourcentage de la population estimée) sont considérés comme caractéristiques :

a) Données de base :
   - 1,0 pour 100 pour les recensements effectués au moins tous les dix ans;
   - 2,0 pour 100 pour les recensements sporadiques;
   - 3,5 pour 100 pour les premiers recensements;
   - 5,0 pour 100 pour les données basées sur des enquêtes par sondage;
   - 10,0 pour 100 pour les données provenant de comptages non standards;
   - 20,0 pour 100 pour les données obtenues par simple conjecture.

b) Ajustements chronologiques (en pourcentage de la population estimée, pour chaque année) :

Type $\mathbf{a}_1$: 0,1	Type $\mathbf{b}_1$: 0,2	Type $\mathbf{c}_1$: 0,6	Type **d** : 1,6
Type $\mathbf{a}_2$: 0,2	Type $\mathbf{b}_2$: 0,4	Type $\mathbf{c}_2$: 0,8	Type **x** : 1,0
Type $\mathbf{a}_3$: 0,4	Type $\mathbf{b}_3$: 0,8	Type $\mathbf{c}_3$: 1,2	Type .. : 1,2

[12] E B tT, où E représente la marge d'erreur (en pourcentage) de l'estimation courante, B la marge d'erreur (en pourcentage) attribuée aux données de base, t le nombre d'années écoulées depuis l'établissement des donnés de base et T la marge d'erreur annuelle (en pourcentage) attribuée à l'ajustement chronologique.

[13] On a d'abord additionné les marges d'erreur en supposant que les erreurs étaient toutes de même signe; on a donc simplement ajouté l'une à l'autre les différentes marges calculées. On a ensuite supposé que les erreurs étaient complètement indépendantes les unes des autres, en sorte que le total des erreurs tendrait à être égal à la racine carrée de la somme des carrés des erreurs composantes. Puis on a fait la moyenne géométrique des deux résultats.

recensement exécuté par la suite. D'ordinaire les recensements omettent une partie de la population enfantine, sinon d'autres groupes d'âge. Les statistiques de l'état civil tendent souvent à sous-estimer l'accroissement de la population, car il est probable que le sous-enregistrement des naissances est supérieur à celui des décès. Les taux présumés, extrapolés à partir d'observations antérieures, ne tiennent pas compte dans bien des cas des effets de la diminution continue de la mortalité. En l'occurrence, la tendance est plutôt à la sous-estimation qu'à la surestimation.

C'est également pour ces raisons qu'il est, semble-t-il, prudent de répartir inégalement dans le sens positif et dans le sens négatif les marges d'erreur des agrégats estimatifs, à raison de trois quarts pour la sous-estimation et d'un quart pour la surestimation. D'après cette méthode, et en exceptant les quatre pays les plus peuplés, on a obtenu les limites suivantes en ce qui concerne les totaux de population estimés au millieu de 1959 pour les différents continents :

	Millions
Afrique	243 – 257
Amérique du Nord	81 – 84
Amérique du Sud	134 – 142
Asie	534 – 562
Europe	420 – 427
Océanie	15,4 – 15,8

Toujours en exceptant les quatre pays les plus peuplés, on peut maintenant estimer que le reste de la population mondiale se situe entre 1 431 et 1 476 millions[14].

TAUX D'ACCROISSEMENT POUR 1950-59

On peut, de même, additionner les erreurs qui entachent les taux d'accroissement[15]. En appliquant aux taux d'accroissement estimatif pour la période 1950-59 la marge d'erreur ainsi calculée, on obtient les estimations limites ci-après pour les taux annuels moyens d'accroissement par continent, en 1950-59, compte non tenu des quatre pays les plus peuplés.

	Pourcentage annuel
Afrique	1,8 – 2,3
Amérique du Nord	2,7 – 3,1
Amérique du Sud	2,1 – 2,6
Asie	1,8 – 2,3
Europe	0,7 – 0,9
Océanie	2,2 – 2,5

Pour l'ensemble de la population mondiale, à l'exception des quatre pays les plus peuplés, on peut estimer que le taux d'accroissement pour la période 1950-59 se situe entre 1,6 et 1,9 pour 100 par an.

POPULATION MONDIALE TOTALE

Comme on l'a vu, la moitié de la population du globe vit en Chine (continentale), aux Etats-Unis, dans l'Inde et en URSS. On peut maintenant combiner les erreurs calculées séparément pour ces quatre pays et pour le reste du monde. Il faut remarquer que, les erreurs ayant davantage tendance à se compenser, le reste de la population du monde peut être estimé avec plus d'exactitude que l'ensemble des quatre populations les plus importantes.

Au total, ces quatre populations étaient comprises en 1959 entre 1 416 millions et 1 508 millions, soit un intervalle de 92 millions. La population du reste du monde devait se situer, en 1959, entre 1.431 et 1.476 millions, soit un intervalle de 45 millions. En supposant que les deux séries d'erreurs soient indépendantes l'une de l'autre, et en employant la formule de la note–15 ci-dessous, on peut estimer qu'au milieu de 1959 la population mondiale se situait entre 2.853 et 2.964 millions, soit un intervalle de 111 millions. Il est évident que l'estimation relative à la Chine (continentale), pour laquelle il faut compter une marge d'erreur de 92 millions, est un facteur essentiel d'incertitude dans le total mondial.

De même, le taux annuel moyen d'accroissement pour 1950-59, estimé à 1,5-2,0 pour 100 pour les quatre populations les plus importantes et à 1,6-1,8 pour 100 pour le reste du monde, peut se situer — étant donné les compensations d'erreurs possibles — entre 1,6 et 1,9 pour 100 pour l'ensemble du monde.

Sur la base des taux calculés pour 1950-59, on peut estimer que l'accroissement annuel moyen de la population mondiale pendant cette période se situe entre les limites suivantes :

	Millions
Total Mondial	42 – 52
Afrique	4,0 – 5,3
Amérique du Nord	4,7 – 5,2
Etats-Unis	(2,8 – 3,0)
Reste de l'Amérique du Nord	(1,9 – 2,2)
Amérique du Sud	2,6 – 3,2
Asie	21,5 – 32,6
Chine (continentale)	(6,9 – 14,3)
Inde	(5,8 – 6,7)
Reste de l'Asie	(8,8 – 11,6)
Europe	2,9 – 3,7
Océanie	0,3 – 0,4
URSS	3,3 – 3,6

En fait, étant donné le déclin de la mortalité, il est à peu près certain que le taux d'accroissement de la population mondiale a maintenant dépassé 1,5 pour 100 par an et il est fort possible qu'il ait même atteint 2,0 pour 100 par an. Dans ces conditions, la population mondiale a certainement augmenté de 45 millions au moins en 1959, et peut-être même de 55 millions. Ici encore, il est évident qu'une grande partie de l'incertitude tient au manque de connaissances précises sur la population de la Chine (continentale). Il faut également compter avec de grandes marges d'erreur pour les estimations concernant l'accroissement annuel de population dans l'Inde, dans d'autres parties de l'Asie et en Afrique.

En résumé, on peut estimer la population mondiale en 1959 à quelque 2.910 millions, ± 50 millions. Il est probable qu'en 1959 l'accroissement annuel de la population mondiale a atteint 50 millions, ± 5 millions.

Les estimations ci-dessus sont données à titre provisoire, car elles dépendent dans une large mesure d'hypothèses qui, tout en paraissant plausibles, sont loin d'être

[14] Intervalle obtenu en additionnant les marges d'erreur pour chaque continent selon la formule de la note 13.

[15] Pour chaque estimation, on a employé la formule e T (1 E), où e représente la marge d'erreur (valeur absolue) dans le taux annuel d'accroissement en pourcentage, T la marge d'erreur attribuée à l'ajustement chronologique (voir note 11) et E la marge d'erreur calculée pour l'estimation de population (selon la formule donnée à la note 12). L'addition a été faite selon la formule de la note 13.

prouvées. Cela montre bien qu'il faut déterminer avec plus de précision les marges d'erreurs existant dans les estimations de population.

Par exemple, on ne sait pas au juste si l'accroissement annuel de population en Europe est maintenant, en valeur absolue, plus ou moins grand que celui des Etats-Unis, de l'Amérique du Sud ou de l'URSS, bien que les estimations de population dans toutes ces régions soient relativement exactes. On sait encore bien moins si le taux moyen de croissance est maintenant plus élevé en Asie ou en Afrique.

Pour confronter réalisations économiques et augmentation des besoins, on considère souvent l'évolution de la population, l'évolution de la masse des revenus, la production alimentaire, le commerce international, etc. Mais tant qu'on n'aura pas pu établir avec certitude les marges d'erreurs existant dans les statistiques, on ignorera quelle peut être la validité des conclusions tirées de telles comparaisons.

L'exactitude des estimations de population dépend de la masse de renseignements concernant la qualité des données et des hypothèses d'après lesquelles les estimations ont été établies. Mieux, on sera renseigné sur l'exactitude et la comparabilité des statistiques de base et des statistiques courantes, mieux on pourra définir avec exactitude les marges d'erreurs des estimations. Il est donc hautement souhaitable que les erreurs dans les résultats de recensements, les statistiques de l'état civil et les autres données démographiques soient examinées aussi fréquemment et aussi minutieusement que les circonstances le permettent. Des enquêtes directes et approfondies sur le terrain peuvent fournir les preuves les plus convaincantes. On obtiendra aussi des éléments utiles en recalculant les balances intercensitaires, en comparant les résultats des recensements avec des estimations antérieures et en examinant des informations descriptives concernant la méthode et la réalisation du dénombrement et de l'enregistrement.

Les estimations annuelles de population perdent de leur exactitude avec le temps jusqu'au jour où l'on obtient de nouvelles données. Les recensements qui ont eu et auront lieu dans de nombreux pays en 1960 et 1961 permettront d'améliorer considérablement la qualité des estimations au cours des quelques années à venir. Ces recensements fourniront également l'occasion d'améliorer les connaissances actuelles sur les risques d'erreurs dans les estimations, par le moyen d'enquêtes post-censitaires sur le terrain ou d'autres contrôles d'exactitude. Reste à savoir dans quelle mesure les gouvernements sauront en tirer profit.

ANNEXE I

POPULATION ESTIMEE AU MILIEU DE 1959 ET CODE RELATIF AU TYPE D'ESTIMATION

Les estimations officielles provisoires sont précédées d'un astérisque (*). Les estimations que l'ONU a établies en attendant de recevoir des estimations officielles courantes sont précédées de l'indice "x". Pour le calcul des estimations pour 1959, on n'a pas tenu compte des résultats des recensements de 1960.

CHAPITRE II. *NOTES TECHNIQUES SUR LES TABLEAUX STATISTIQUES*

INTRODUCTION

ORIGINE DES DONNEES

Sauf indication contraire, les statistiques présentées dans l'*Annuaire démographique* sont des données officielles. Elles ont été rassemblées par le Bureau de statistique de l'Organisation des Nations Unies à partir des renseignements que communiquent mensuellement ou annuellement les services officiels de statistique ou autres organismes compétents de plus de 200 pays et territoires, ces renseignements étant complétés, le cas échéant, par des chiffres empruntés aux publications officielles.

Afin d'assurer la comparabilité du point de vue des méthodes de calcul, tous les taux et rapports autres que les valeurs des fonctions des tables de mortalité (à l'exception de quelques cas signalés dans les tableaux) ont été calculés au Bureau de statistique de l'Organisation des Nations Unies selon les méthodes exposées pour chaque tableau. Les chiffres de population utilisés pour le calcul des taux sont des données de recensement ou des estimations qui ont été, presque toutes, reproduites dans la présente édition de l'*Annuaire* ou dans une édition antérieure.

Chaque fois que l'on constatera des différences entre les données du présent volume et celles des éditions antérieures de l'*Annuaire démographique,* on pourra tenir pour acquis que les statistiques publiées cette année sont des chiffres revisés communiqués au Bureau de statistique avant le 31 décembre 1960.

CHAMP DES STATISTIQUES

Portée géographique

Conformément aux plans adoptés à l'origine, on a cherché à rendre la portée géographique des tableaux aussi large que possible dans certaines limites. Cela signifie que, d'une façon, générale, chaque tableau de l'*Annuaire* présente des statistiques de portée nationale pour tous les pays et territoires qui ont communiqué les données voulues. En outre, lorsqu'il n'a pas été possible d'obtenir des statistiques pour l'ensemble du territoire ou de la population, on a publié des données de portée plus limitée, se rapportant à des zones d'enregistrement ou même à des villes particulières chaque fois que l'on a jugé que ces statistiques présentaient encore assez d'intérêt. Il est à noter que la publication de toutes les données disponibles n'implique aucun jugement de valeur sur leur exactitude. S'il a été possible d'étendre ainsi au maximum la portée géographique des tableaux, c'est parce que l'on disposait des codes de qualité exposés aux pages 66 et 71.

Le tableau 1 est le plus complet; il donne l'effectif de la population et la superficie de chaque pays — souverain ou non — comptant au moins 50 habitants, ce qui a permis de présenter au tableau 2 des chiffres globaux pour le monde et 14 régions géographiques. Après celles du tableau 1, les données les plus complètes sont les séries chronologiques et les statistiques de l'état civil. Les répartitions de fréquences selon les caractéristiques de la population couvrent un champ plus limité, tandis que la portée géographique des tableaux diminue à mesure que des variables sont introduites.

Il convient également de noter que les tableaux contenant des taux ont naturellement une portée géographique un peu plus restreinte que les tableaux où sont présentés des nombres absolus. Les critères appliqués pour le calcul des taux sont exposés dans la section "Description des tableaux" (p. 74 et suiv.).

Définition du territoire (région géographique)

Autant que possible, les séries chronologiques aussi bien que les distributions de fréquence se rapportent au territoire actuel (1960) des unités géographiques indiquées. Lorsque le territoire auquel les chiffres se rapportent diffère du territoire de 1960, on a signalé en note la nature de la différence.

Dans les cas où, par suite de modifications territoriales fréquentes ou récentes, ou pour d'autres raisons, le sens des mots territoire actuel appelle une précision, une brève définition est donnée en note dans le tableau 1. Les notes relatives à la composition des territoires se trouvent exclusivement dans le tableau 1, sauf si elles ont trait à des modifications territoriales ou administratives intervenues en 1960. Pour éviter toute confusion en ce qui concerne l'année de transition, le territoire actuel des pays intéressés — il n'y en a qu'un petit nombre — est défini dans les notes des tableaux où ces pays sont mentionnés, même lorsque les données se rapportent au territoire actuel.

Définition de la population

Lorsqu'on a rassemblé les statistiques nationales en vue de leur publication, on s'est efforcé essentiellement d'obtenir des données sur la population présente ou population de fait, plutôt que sur la population de résidence habituelle ou population de droit. Aussi, sauf indication contraire, les statistiques de la population et celles de l'état civil concernent à la fois les nationaux et les étrangers, nés dans le territoire ou en dehors, les aborigènes, les tribus de la jungle, les nomades, les personnes déplacées, les détenus, les réfugiés, ainsi que toutes autres catégories d'individus se trouvant dans le pays ou territoire à une date donnée.

Il convient cependant de noter que, lorsqu'on disposait des statistiques nécessaires, on a ajusté ou rectifié les estimations de population de manière à englober les militaires nationaux et le personnel diplomatique hors du pays, tout en excluant les militaires et le personnel diplomatique étrangers ainsi que les prisonniers de guerre ennemis se trouvant sur le territoire. Pour plus de clarté, on a expliqué ces ajustements dans les tableaux contenant les chiffres de population et, au besoin, dans ceux où sont présentés des taux calculés à partir de ces chiffres. On trouvera un exposé plus complet des méthodes d'ajustement à la page 63.

NOMENCLATURE

Le tableau 1 — le plus complet en ce qui concerne la portée géographique et les définitions de territoire — suit de près la nomenclature officielle actuelle, les noms de pays qui y sont donnés correspondant aux désignations complètes officiellement employées à l'Organisation des Nations Unies à la date du 31 décembre 1960 [1].

Cependant, comme la place manque dans les autres tableaux, on a jugé commode, pour certains pays et territoires, d'utiliser une désignation abrégée. Les pays dont le nom figure sous une forme abrégée dans les tableaux 3 à 23 sont les suivants: le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, désigné par Royaume-Uni; les Etats-Unis d'Amérique, désignés par Etats-Unis; l'Union des Républiques socialistes soviétiques, la République socialiste soviétique de Biélorussie et la République socialiste soviétique d'Ukraine, respectivement désignées par URSS, RSS de Biélorussie et RSS d'Ukraine.

Ordonnance des noms

L'ordonnance des noms dans la colonne de gauche et dans les têtes de colonnes des tableaux se présente sous deux formes.

Dans le tableau 1, toutes les principales unités géographiques du monde, pour chaque continent et pour l'URSS (classés dans l'ordre alphabétique anglais), sont rangées selon leur statut administratif. Pour chaque continent, on a d'abord donné, sans autre précision, les pays indépendants; puis viennent les territoires et dépendances, les territoires sous tutelle, les régions sous administration militaire et les condominiums, ces unités étant classées selon l'autorité administrante. A l'intérieur de chaque catégorie, les noms sont rangés dans l'ordre alphabétique anglais.

Dans les tableaux 3 à 23, ne figurent que les pays et territoires pour lesquels on possède des statistiques: ils sont énumérés par continent dans l'ordre alphabétique anglais.

Le nom de l'autorité administrante n'est pas indiqué, sauf lorsque deux territoires ont le même nom et risqueraient par conséquent d'être confondus.

Etant donné leur nombre et leur importance, les changements de nom et modifications administratives et constitutionnelles survenus en 1960 sont signalés non seulement dans le tableau 1, mais aussi dans tous les autres tableaux. Pour des raisons de commodité, on rappellera ici ces changements dans l'ordre chronologique. Les changements intervenus en 1959, ou avant cette date, ont été indiqués dans les éditions antérieures de l'*Annuaire démographique.*

1960	*Ancien nom*	*Nouveau nom*	*Nature du changement*

28 novembre	Mauritanie	Mauritanie	Indépendance

Les désignations utilisées dans cette publication et la présentation des données qui y figurent n'impliquent de la part du Secrétariat de l'ONU aucune prise de position quant au statut juridique de tel ou tel pays ou territoire, ou de ses autorités, ni quant au tracé de ses frontières. Ces désignations n'ont d'autre objet que de donner un cadre géographique commode aux séries statistiques. La même observation vaut pour toutes les notes et précisions fournies sur les unités géographiques pour lesquelles des données sont présentées.

EVALUATION DE LA QUALITE DES DONNEES

Comme on a commencé à le faire dans l'édition de 1959 de l'*Annuaire démographique,* on a essayé dans la présente édition de différencier les données selon leur degré d'exactitude en utilisant pour l'impression deux caractères distincts: le romain pour les données reconnues exactes et l'italique pour les données dont l'exactitude est discutable.

Le classement dichotomique, par qualité, des chiffres de population présentés dans les tableaux 1-12 est fondé sur le code initialement établi pour les estimations en 1950, lequel a été progressivement modifié depuis lors. Les bases théoriques de ce code, ainsi que les raisons qui justifient son emploi pour l'évaluation des données sont exposées en détail à la page 66.

Les statistiques de l'état civil ont été classées en statistiques exactes et statistiques discutables selon le degré de complétude de l'enregistrement des faits d'état civil courants. Comme dans les *Annuaires* précédents les statistiques de l'état civil sont jugées complètes lorsqu'elles représentent au moins 90 pour cent du nombre total des naissances, des décès, des mariages et des divorces qui ont eu lieu pendant l'année considérée. Les séries con-

[1] Pour la plupart des pays et territoires, voir : ONU, Groupe de terminologie. *Names of Countries and Adjectives of Nationality.* Document ST/CS/SER.F/165, 9 mars 1960, 28 p. ronéo, et additifs, Documents ST/CS/SER.F/165/Add. 1-6/Rev. 1. 30 septembre 1960.

sidérées comme complètes ou exactes sont reproduites en caractère romain; celles qui sont moins exactes ou dont le degré d'exactitude n'est pas connu, en italique. Le code de qualité ordinaire (C et U) sur lequel repose le classement figure, comme d'habitude, dans les tableaux chronologiques; on trouvera à la page 71 des précisions sur la manière dont il a été établi.

Pour compléter le classement approximatif exposé ci-dessus, les divergences connues entre les définitions, les méthodes d'estimation et les modes d'exploitation des données sont, comme à l'ordinaire, signalés en notes, au bas des tableaux. Les conséquences de ces divergences, ainsi que les plus communes des causes d'erreur et les risques de mauvaise interprétation des données, sont exposés dans les paragraphes consacrés à chaque tableau (p. 74 et suiv.).

Dans l'*Annuaire démographique* de 1952, on avait pour la première fois analysé les erreurs de déclaration d'âge dans les recensements et, de ce point de vue, classé les recensements selon leur degré d'exactitude. Cette évaluation a été faite dans chaque édition successive de l'*Annuaire* jusqu'en 1955. On la retrouvera dans la présente édition à la page 65.

Un autre signe, réintroduit dans l'édition de 1953, a été conservé. Il s'agit de la croix (†) servant à distinguer les statistiques exploitées selon l'année de l'enregistrement de celles qui sont exploitées selon l'année de l'événement. On ne saurait trop insister sur l'importance de cette distinction, particulièrement en ce qui concerne l'évaluation de la qualité des statistiques des naissances vivantes; on trouvera à la page 72 un exposé détaillé de ses conséquences.

SUPERFICIE

Dans les tableaux 1 et 2 du présent volume, on trouvera des renseignements sur l'étendue ou la superficie des territoires considérés. Le tableau 1 donne le chiffre estimatif le plus récent de la superficie de chaque unité géographique du monde; le tableau 2 donne la superficie totale de chaque continent, de chaque région et de l'ensemble du monde. Sauf indication contraire, tous ces chiffres représentent des superficies totales, c'est-à-dire qu'ils englobent les terres émergées et les eaux intérieures, à l'exception des régions polaires et de certaines îles inhabitées. Les eaux intérieures sont censées comprendre les principaux lacs et cours d'eau.

SOURCES DE VARIATIONS

Les défauts de comparabilité entre données relatives à la superficie sont dus essentiellement à des différences de définition; par exemple, on ne saurait comparer le chiffre de la superficie totale à celui de la superficie terrestre, à moins que la superficie des eaux intérieures soit négligeable. La définition du terme "eaux intérieures" peut également varier d'un pays à l'autre; dans un pays, ce terme peut s'entendre des principaux lacs et cours d'eau seulement (ce qui est la norme) et, dans un autre, il peut s'appliquer en outre à la zone maritime comprise à l'intérieur des golfes, aux baies et aux criques, ce qui risque d'entraîner un défaut de comparabilité entre les données de pays à frontières maritimes étendues.

Les données de base relatives à la superficie posent aussi des problèmes. Certaines proviennent de levés géodésiques effectués dans des conditions scientifiques modernes; d'autres ne représentent que des conjectures reposant sur des renseignements fragmentaires ou aléatoires. Pour certains pays, les chiffres sont très récents et tiennent compte des derniers levés ainsi que de toutes les modifications territoriales importantes qui sont intervenues; pour d'autres, ils le sont moins et les rectifications de frontières les plus récentes risquent d'avoir été négligées. Comme on ignore pour beaucoup de pays la méthode de calcul de la superficie, la composition exacte du territoire et l'époque précise à laquelle se rapportent les données, il n'est pas possible de procéder, d'après le tableau 1, à des comparaisons rigoureuses d'un pays à l'autre.

Le fait que certains chiffres sont différents de ceux que l'on a publiés précédemment s'explique par la revision des estimations antérieures, par des augmentations effectives de la superficie terrestre — dues par exemple à des travaux d'assèchement — ou par l'utilisation de nouvelles unités de mesure. Comme il n'est pas toujours possible de déterminer la raison de ces revisions, on a simplement remplacé les anciens chiffres par les nouveaux en admettant arbitrairement que ce sont ces derniers qui sont exacts.

Dans le présent *Annuaire,* les superficies sont exprimées en kilomètres carrés; le cas échéant, on a converti les chiffres communiqués en *miles* carrés sur la base de 2,589998 km² pour 1 *mile* carré. L'utilisation d'un autre coefficient conduirait évidemment à des résultats un peu différents. En outre, les chiffres ont été arrondis à l'unité la plus proche.

POPULATION

La présente édition de l'*Annuaire démographique* — la douzième — étant consacrée surtout aux mouvements de la population au cours de la quarantaine d'années 1920-1960, les statistiques de la population occupent les douze premiers des vingt-trois tableaux que comporte l'*Annuaire* et se rapportent à l'évolution des variables ci-après dans les pays considérés : âge et sexe; population des localités de 20 000 habitants et plus et de 100 000 habitants et plus; urbanisation; aptitude à lire et à écrire; activité économique et situation matrimoniale. En outre, on y trouvera le chiffre de la population de certaines villes ainsi que la répartition géographique de la population dans le monde.

Des variations de plusieurs sortes apparaissent dans les données. Les classifications appliquées dans les différents pays ne sont pas toujours identiques à la classification type utilisée dans les tableaux de l'*Annuaire*; les définitions de certaines caractéristiques varient aussi d'un pays

TABLEAU A. COMPOSITION DE LA POPULATION TOTALE DANS LES RECENSEMENTS DE 52 PAYS, 1945-1954

[1] Comptés à part.
[2] Les indiens civilisés ou presque ont été dénombrés, mais les indiens de la jungle ne l'ont pas été.
[3] Les marins de commerce et militaires non résidents n'ont pas été dénombrés.
[4] Une partie de la zone de tribus d'Assam n'a pas été recensée.
[5] Compris dans le total de la population légale ou de droit mais exclus du total de la population présente ou de fait.
[6] Compris dans le total de la population présente ou de fait, mais exclus du total de la population légale ou de droit.
[7] Les personnes longtemps absentes comme les prisonniers de guerre ont été dénombrées au titre d'absents.
[8] Les membres d'équipage et les passagers des navires en mer ou dans des ports étrangers ont été dénombrés.
[9] Les personnes à bord de bateaux de plaisance ou de pêche rentrés au port dans un délai de trois semaines après la date du recensement sans toucher un port étranger aux Iles britanniques ont été dénombrées.
[10] Les aborigènes civilisés ou presque ont été dénombrés, mais on n'a pas de renseignement sur ceux qui vivent à l'état sauvage.

à l'autre. Les variations de cet ordre sont indiquées dans les tableaux chaque fois que faire se peut et expliquées dans les notes concernant les répartitions correspondantes[2].

Il y a également d'autres causes plus profondes de variations qui sont communes à toutes les statistiques de population. On peut citer notamment le défaut de comparabilité imputable aux changements de composition de la population totale d'une région déterminée, ainsi que les difficultés relatives à l'évaluation tant du sous-dénombrement et des omissions que de la qualité des estimations. Toutes ces questions seront examinées dans les sections qui suivent.

SOURCES DE VARIATIONS

Définition de la population totale

Pour déterminer dans quelle mesure les données sont comparables, il convient de tenir le plus grand compte des différences de composition de la "population totale dénombrée" d'un pays à l'autre.

Population de fait et population de droit

Par population totale d'un pays on entend d'ordinaire soit la population présente ou de fait, soit la population de droit. A proprement parler, la population présente ou de fait comprend toutes les personnes — résidents et non-résidents — dénombrées dans le pays à l'endroit où elles se trouvaient effectivement au moment du recensement. Au contraire, le dénombrement de la population de droit porte sur toutes les personnes qui ont leur résidence habituelle dans le pays, quel que soit l'endroit où elles se trouvent au moment du dénombrement. Aussi simples que ces critères puissent paraître, il est rare de les voir appliquer strictement. De plus, même lorsque les termes en question sont utilisés avec rigueur pour décrire la méthode par laquelle ont été obtenus des totaux partiels dans un recensement national de population, on s'expose souvent à des erreurs quand on les applique à des totaux nationaux aux fins de comparaisons internationales. En outre, l'un de ces termes peut définir correctement la méthode de dénombrement (au lieu de résidence ou au lieu de présence) mais être tout à fait inapplicable aux séries statistiques.

Les différences importantes qui existent, d'un pays à l'autre, dans la composition effective de la population totale recensée, qu'il s'agisse, par définition, de population de fait ou de population de droit apparaissent dans le tableau A, page 62, qui indique comment le statisticien a traité certaines fractions de la population dans les recensements effectués entre 1945 et 1954 dans 52 pays souverains. Il semble donc évident que les termes "population de fait" et "population de droit", bien qu'ils soient devenus classiques, ne permettent pas de se faire une idée exacte de la composition de la population dénombrée. En outre, comme ils ont été employés dans des acceptions très différentes, ils ont presque complètement perdu leur sens sur le plan international. Cependant, ce sont les termes qu'on rencontre le plus communément dans les statistiques nationales et il faut donc les accepter lorsqu'on utilise des chiffres de population provenant de différents pays.

Population de fait rectifiée (total international normalisé)

Afin d'augmenter la comparabilité internationale des résultats des recensements de population qui seraient effectués vers 1950 et d'obtenir de meilleures données pour le calcul d'agrégats mondiaux ou régionaux, la Commission de la population a recommandé de prendre pour base d'exploitation statistique la "population de fait rectifiée"[3]. Cette notion a été reprise dans les *Principes et recommandations concernant les recensements nationaux de population*[4] qui doivent servir de guide pour la série de recensements de 1960. Dans ces recommandations, le nouveau total est appelé "total international normalisé"; c'est, par définition, "le nombre total des personnes présentes sur le territoire au moment du recensement, *à l'exclusion* des militaires et membres du personnel diplomatique étrangers dans le pays et de leurs familles s'y trouvant avec eux, mais *y compris* les militaires nationaux et membres du personnel diplomatique du pays et leurs familles à l'étranger, ainsi que les marins de commerce résidant dans le pays mais se trouvant en mer au moment du recensement".

Conformément à ces recommandations, les chiffres de population présentés dans l'*Annuaire* — qu'il s'agisse de résultats de recensements ou d'estimations — correspondent, autant que possible, à la population présente rectifiée, soit, selon la nouvelle terminologie, au total international normalisé; en d'autres termes, ils *tiennent compte*, le cas échéant, des tribus de la jungle, des aborigènes, des nomades, des personnes déplacées et des réfugiés, ainsi que des militaires nationaux et membres du personnel diplomatique du pays et leurs familles à l'étranger, *mais non* des militaires et membres du personnel diplomatique étrangers et leurs familles se trouvant dans le pays, ni des prisonniers de guerre ennemis sur le territoire[5].

Exactitude des recensements

Population totale

Qu'il s'agisse de la population de fait ou de la population de droit, il est, à bien des égards, difficile d'éviter les omissions et doubles comptes dans le recensement de la population d'une unité géographique donnée. Les difficultés que l'on rencontre sont naturellement plus importantes dans les pays où la population n'est pas habituée aux recensements, mais, à vrai dire, elles se présentent dans tous les dénombrements[6].

[5] Pour plus de détails sur les définitions de population de droit et de population de fait, ainsi que sur les incidences de ces définitions en ce qui concerne les dénombrements : *op. cit. Manuel des méthodes de recensement de la population*. Vol. I, *Aspects généraux d'un recensement de la population*, p. 100-101; vol. III, *Caractéristiques démographiques et sociales de la population*, p. 59-64.

[6] Pour plus de détails, voir *Annuaire démographique* de 1956, chapitre I, p. 70-72. Voir également *Manuel des méthodes de recensement de la population*, vol. I, *op. cit.*, p. 114 à 122.

En déterminant l'erreur par défaut au moyen d'une enquête de contrôle post-censitaire sur le terrain ou par d'autres procédés, il est possible de rectifier le chiffre de la population totale, mais on ne peut généralement pas rectifier les répartitions, si ce n'est peut-être la répartition géographique. La principale utilité de ces opérations de contrôle est donc de souligner les lacunes des recensements même les mieux organisés et exécutés, et d'encourager la précision. Afin de prévenir toute erreur d'interprétation des données présentées dans les différents tableaux de l'*Annuaire,* on a pris soin de définir les populations (autant que faire se peut) en précisant, par exemple, population effectivement dénombrée ou données ajustées, et d'indiquer le coefficient de correction[7].

Répartition par âge

L'âge, qui est la caractéristique la plus universellement utilisée dans les statistiques de la population et dans celles de l'état civil, est généralement déterminé au moyen de deux types de questions, posées ensemble ou séparément. Dans un cas, on demande la date de naissance et dans l'autre l'âge exprimé en unités de temps révolu — en années — au dernier anniversaire pour des adultes et en mois, semaines ou jours pour les enfants de moins de 1 an. Ces deux méthodes ne donnent pas nécessairement des résultats d'une égale exactitude. Il est évident que la question relative à la date de naissance permet d'obtenir des données beaucoup plus précises que la question directe sur l'âge, mais il va sans dire qu'il serait vain de la poser dans les pays où bien des gens sont illettrés ou, pour toute autre raison, incapables d'indiquer leur date de naissance avec exactitude. Il arrive aussi que les réponses à la question directe soient inexactes, que l'erreur ait été faite par ignorance ou de propos délibéré.

Une autre source d'inexactitude réside dans la méthode de classement des données recueillies. La méthode recommandée consiste à passer de la date de naissance à l'âge au dernier anniversaire, en faisant la différence entre la date exacte de la naissance et la date de recensement. Les âges exprimés dans la plus grande unité possible de temps révolu — c'est-à-dire années, mois, semaines, jours — sont ensuite répartis en des groupes d'âge déterminés, ou, le cas échéant, classés par année d'âge. Toutefois, on n'a pas toujours recours à la méthode des années révolues. Dans certains pays on n'effectue aucun calcul et la population n'est pas classée par âge mais simplement par année de naissance. En pareil cas, tous les enfants nés pendant l'année qui précède immédiatement celle du recensement sont censés être âgés de 1 an, même si, étant nés le 30 novembre et le recensement ayant été effectué le 1er janvier de l'année suivante, ils n'ont en réalité que 1 mois révolu. Lorsque ce mode de classement est utilisé, il est facile de le voir dans les statistiques : le nombre des enfants de moins de 1 an est plus petit qu'il ne devrait l'être normalement eu égard à l'effectif des groupes suivants. Il est à noter cependant que, dans le cas d'une année de forte natalité, les effets de cette méthode ne sont pas toujours aussi apparents. On peut citer un exemple typique : celui de la répartition de la population norvégienne par année d'âge en 1946 (voir l'*Annuaire* de 1955). En l'occurrence, les données sont classées par année de naissance et indiquent que le groupe moins de 1 an comprend 69 133 enfants, tandis qu'il n'y a que 62 464 enfants âgés de 1 an. S'il en est ainsi, c'est probablement parce qu'en Norvège le taux de natalité a atteint son maximum d'après guerre en 1946, ce qui explique l'accroissement du nombre des enfants classés dans le groupe moins de 1 an.

Les sources d'erreur, dans les recensements ou l'enregistrement, sont nombreuses; on peut citer notamment l'ignorance de l'âge exact, la négligence, la tendance générale à déclarer des âges se terminant par certains chiffres tels que 0, 2, 5 et 8 et, pour les personnes âgées, à exagérer leur âge, l'aversion irraisonnée pour certains nombres tels que 13 et les fausses déclarations faites délibérément pour des motifs d'ordre économique, social, politique ou simplement personnel. Les sources d'erreur mentionnées ci-dessus sont communes à la plupart des enquêtes sur l'âge et à la plupart des pays et nuisent considérablement à la comparabilité.

Une autre cause de non-comparabilité qui n'existe d'ailleurs pas partout est l'emploi de méthodes différentes pour le calcul de l'âge, par exemple la méthode occidentale et la méthode orientale, ou, comme on les désigne plus communément, la méthode anglaise d'une part et, d'autre part, la méthode chinoise selon laquelle on considère que l'enfant est âgé d'un an à sa naissance et qu'il avance en âge d'un an à chaque nouvelle année chinoise. Ces différences ne sont pas universelles, mais elles peuvent nuire à la comparabilité des données entre pays.

A cause des difficultés et des différences en question, les répartitions par âge et par sexe de la population d'un grand nombre de pays comportent certaines inexactitudes, notamment: 1) erreur par défaut dans les groupes d'âge correspondants aux enfants de moins de 1 an et autres jeunes enfants; 2) polarisation des déclarations sur les âges se terminant par le chiffre 0 ou 5; 3) prépondérance des âges pairs au détriment des âges impairs; 4) écart considérable et inattendu entre le nombre des hommes et celui des femmes pour certains âges et 5) différence importante et difficilement explicable entre les effectifs de groupes d'âge successifs ou voisins. En comparant les statistiques fournies par des recensements successifs pour des cohortes d'âge et de sexe identiques et en étudiant la répartition par âge et par sexe de la population à chaque recensement, on peut constater l'existence de ces inexactitudes et de quelques autres; un certain nombre d'entre elles se retrouvent dans les recensements, même les plus modernes. Pour certaines applications, elles enlèvent beaucoup de valeur aux statistiques.

Evaluation de l'exactitude

Pour déterminer, sur la base des anomalies relevées dans les groupes d'âge quinquennaux, le degré d'exactitude des statistiques par âge, on avait mis au point un indice spécial[8] qui devait être présenté dans l'*Annuaire*

[7] Pour les estimations des différents pays, voir le tableau 1, p. 99.

[8] Pour calculer cet indice, on déterminait d'abord, pour chaque sexe, la différence entre l'unité et le rapport du nombre d'individus dans chaque groupe d'âge à la moyenne des nombres correspondants dans les deux groupes d'âge adjacents. On déterminait également les variations du rapport de masculinité d'un groupe d'âge à l'autre. Pour combiner les valeurs moyennes de ces deux séries d'écarts de façon à obtenir l'indice, il fallait tenir compte de facteurs tels que l'influence de mouvements passés du taux de natalité, des pertes de guerre élevées et, le cas échéant, de l'effectif restreint de la population. On trouvera dans le *Bulletin démographique* No 2 (ONU,

démographique de 1949-50. Cet indice était sensible à l'influence des différents facteurs qui limitent l'exactitude des données et il n'échappait pas non plus à celle des véritables fluctuations démographiques. On ne pouvait donc l'appliquer indistinctement à toutes les statistiques, à moins d'effectuer les ajustements nécessaires et de faire preuve de prudence dans l'interprétation des résultats.

La publication dans l'*Annuaire démographique* de 1955 de statistiques de la population par année d'âge a permis d'utiliser un indice simple mais très sensible dont l'interprétation échappe pratiquement à l'influence des facteurs sans rapport avec l'exactitude des déclarations d'âge. Il existe des méthodes plus perfectionnées pour évaluer l'exactitude des répartitions de population par année d'âge, mais on a décidé de se servir ici de cet indice particulier à cause de sa simplicité et de la large utilisation dont il a déjà fait l'objet dans d'autres publications.

Cet indice est attribué à Whipple et il est connu sous le nom d'indice de Whipple ou encore d'indice de concentration[9]. Il s'obtient en additionnant les déclarations d'âge comprises entre 23 et 62 ans inclusivement et en calculant le pourcentage des âges déclarés se terminant par 0 ou 5 par rapport au cinquième du nombre total de déclarations. Les résultats varient entre un minimum de 100, s'il n'y a aucune concentration en polarisation, et un maximum de 500, si aucun âge déclaré ne se termine par un chiffre autre que 0 et 5[10].

Cet indice est applicable à toutes les répartitions par âge pour lesquelles les années d'âge sont données au moins jusqu'à 62 ans, sauf dans les cas suivants: 1) lorsque les données présentées ont déjà fait l'objet d'un ajustement, l'indice de Whipple ne révèle aucune irrégularité bien que des inexactitudes d'un type différent puissent fausser ces données; 2) lorsque les statistiques relatives à l'âge sont établies sur la base l'année de naissance et que la tendance à arrondir l'année de naissance se traduit par une fréquence excessive des âges impairs (comme c'est le cas dans les résultats du recensement yougoslave de 1948), on ne peut utiliser la méthode reposant sur les déclarations d'âge se terminant par 5 et 0 pour évaluer l'exactitude des données recueillies.

A partir des chiffres relatifs à l'ensemble des deux sexes, on a calculé cet indice pour toutes les statistiques par année d'âge disponibles au 1er novembre 1956, à l'exception de celles que l'on a écartées pour les motifs indiqués plus haut. Les résultats ont été groupés dans les 5 catégories suivantes:

	Indice de Whipple
I. Données très exactes	moins de 105
II. Données relativement exactes	105 à 109,9
III. Données approximatives	110 à 124,9
IV. Données grossières	125 à 174,9
V. Données très grossières	175 et plus

Ces catégories sont forcément arbitraires et il se peut que l'on sépare ainsi des séries de statistiques qui sont très peu différentes du point de vue de la qualité. Par exemple, on est arrivé à l'indice 104,4 pour la population européenne de la Nouvelle-Zélande en 1945 tandis que pour la population totale on a obtenu l'indice 105,2; la différence est minime mais elle amène à ranger le deuxième groupe dans la catégorie II et non dans la catégorie I. L'évaluation provisoire de l'exactitude des déclarations d'âge correspondant à 91 séries, fournies par les recensements, donne les résultats suivants:

***Catégorie I:* Données très exactes**

On a également calculé cet indice pour chaque sexe. On admet généralement que les déclarations d'âge sont, dans la plupart des cas, plus exactes pour les hommes que pour les femmes. Ainsi, pour les 51 séries par âge et par sexe auxquelles un indice de 105 et plus a été attribué, l'indice des femmes est supérieur à celui des hommes dans 45 cas, mais inférieur dans 6. Ce dernier groupe, qui est celui où les déclarations d'âge des femmes ont accusé moins de préférence pour certains chiffres que celles des hommes, comprend la Barbade, la Guinée Portugaise, Haïti, la Nouvelle-Guinée et la Nouvelle-Zélande 1951 (Maoris). Quand on interpréte l'indice de Whipple, il ne faut pas oublier qu'il ne reflète que la préférence pour les âges se terminant par 5 et 0. Il semble cependant qu'on puisse admettre qu'il existe généralement certains liens entre cette préférence et d'autres sources d'inexactitudes dans les déclarations d'âge. Sous cette réserve, on peut dire que l'indice donne une assez bonne idée de l'exactitude des déclarations d'âge.

Valeur des estimations de population

La valeur des estimations de population dépend de la nature et de la qualité des statistiques employées pour les établir ainsi que de la méthode utilisée pour combiner ces statistiques. Le degré d'exactitude d'une estimation est suffisant si la probabilité qu'elle contienne une erreur relativement importante est faible ou si, dans une gamme de probabilités donnée, les erreurs sont relativement petites. Ainsi défini, le degré d'exactitude peut se mesurer si les erreurs possibles dans chacun des éléments de l'estimation ont été quantitativement évaluées. En ce qui concerne les statistiques de population, une évaluation quantitative de ce genre n'est faite systématiquement que dans quelques pays. On ne peut donc, dans la plupart des cas, déterminer le degré d'exactitude des estimations de population que d'une manière approximative, compte tenu des méthodes utilisées pour les établir.

Evaluation des estimations courantes de la population totale

Pour donner une idée approximative du degré d'exactitude probable des estimations courantes de la population totale, un code indiquant la manière dont elles sont établies avait été introduit, à titre d'essai, dans le tableau 1 de l'édition de 1949-1950 de l'*Annuaire*. A la lumière des renseignements et connaissances supplémentaires, on s'est aperçu que les légères modifications apportées chaque année depuis 1952 étaient insuffisantes. En 1958, on a jugé possible et nécessaire de procéder à une revision plus radicale pour deux raisons: *a*) on était alors en mesure de distinguer plus nettement les facteurs logiques dont dépend l'exactitude de chaque estimation; *b*) il semblait y avoir intérêt à tenir d'avantage compte de l'écart entre la date où la population a été effectivement mesurée pour la dernière fois (par exemple, la date du dernier recensement) et la date de l'estimation considérée.

Pour établir le nouveau code, on a admis que cinq facteurs influent sur la qualité d'une estimation courante de la population: 1) la nature du chiffre de population qui sert de base; 2) l'erreur probable que comporte ce chiffre de base; 3) le temps écoulé depuis qu'il a été établi; 4) la méthode d'ajustement chronologique ayant servi à mettre le chiffre de base à jour; 5) la qualité de la méthode d'ajustement chronologique. Cependant, comme on n'a recueilli jusqu'à présent que très peu d'indications comparables sur l'erreur probable que comportent les chiffres de base, on ne peut prendre systématiquement en considération que les facteurs 1, 3, 4 et 5. C'est pourquoi le code revisé se compose de quatre éléments, à savoir la nature des données de base, leur âge, la méthode d'ajustement chronologique et la qualité de cet ajustement. Voici d'abord quels sont les signes conventionnels du code; on trouvera plus loin des explications plus complètes.

Premier élément. Nature des données de base (lettres majuscules)

A Recensement complet.

B Recensement ou enquête par sondage.

C Recensement ou enregistrement partiel.

D Estimations conjecturales.

.. Nature des données de base inconnue.

Deuxième élément. Age des données de base (indices accompagnant les majuscules)

Dans chaque cas, l'indice est le nombre d'années écoulées depuis l'établissement des données de base.

Troisième élément. Méthode d'ajustement chronologique (lettres minuscules)

a Ajustement d'après un registre de population permanent.

b Ajustement d'après l'équation d'équilibre (solde des naissances, des décès et de la migration nette).

c Ajustement d'après un taux d'accroissement présumé.

d Pas d'ajustement; base constante pour au moins deux années consécutives.

x Ajustement d'après des estimations de populations régionales.

.. Méthode d'ajustement inconnue.

Quatrième élément. Qualité de l'ajustement pour les types a et b (chiffre accompagnant la lettre a ou b)

1 Balance démographique sûre.

2 Balance démographique de qualité inconnue.

3 Balance démographique non sûre.

Qualité de l'ajustement pour le type c (chiffre accompagnant la lettre c)

1 Au moins deux recensements, à intervalle de dix ans ou moins.

2 Au moins deux recensements, l'intervalle entre les deux derniers étant de plus de dix ans.

3 Un ou zéro recensement.

Le premier élément, c'est-à-dire les lettres majuscules **A, B, C, D** ou un groupe de deux points de suspension (. .), indique la nature des données de base d'après lesquelles a été établie l'estimation courante.

A: La lettre **A** signifie que le recensement initial des individus a été fait de manière à obtenir séparément des données pour chaque habitant du territoire[11]. Qu'il soit effectué par la méthode de l'auto-dénombrement ou par la méthode de l'entrevue, le dénombrement est considéré comme un recensement véritable; l'inscription sur un registre des individus appelés à se présenter à un bureau central peut passer pour l'équivalent d'un recensement de la population, de même que l'établissement d'une liste des habitations ou un recensement de l'habitation lorsqu'il fournit des renseignements distincts sur chaque individu. Aux fins du codage, seuls ont été classés dans la catégorie **A** les chiffres de base dont 50 pour cent au moins ont été ainsi obtenus.

B: La lettre **B** signifie que les données de base sont une estimation obtenue à partir des résultats d'un recensement ou d'une enquête par sondage, les échantillons ayant été choisis de manière à représenter la majorité (plus de 50 pour cent) de la population. Le degré d'exactitude des chiffres de population totale obtenus par sondage varie beaucoup, mais, si certaines conditions sont remplies, il peut correspondre à celui des chiffres obtenus par dénombrement complet.

C: La lettre **C** signifie que le chiffre de base a été obtenu dans des conditions autres que celles désignées par les lettres **A** et **B**. Cette catégorie comprend les estimations établies d'après les résultats de recensements portant sur moins de 50 pour cent de la population ou s'étendant sur une longue période (plus de 12 mois); les estimations fondées sur le dénombrement de certains groupes de personnes, par exemple celles qui ont été dénombrées lors de recensements agricoles, de recensements scolaires ou autres et celles qui sont inscrites sur des registres spéciaux (rôles de l'impôt, listes électorales, dossiers des services de rationnement, etc.). Les estimations établies sur la base de dénombrements d'habitations (huttes ou tentes par exemple) en l'absence de toute liste comportant l'identité de chaque habitant sont considérées comme entrant dans cette catégorie, de même que la totalisation des chiffres contenus dans les rapports des administrations locales concernant les habitants de la zone considérée. Dans ces estimations, l'erreur dont le chiffre de la population totale est vicié se compose d'erreurs commises dans le dénombrement ou les dénombrements partiels et d'erreurs imputables aux coefficients ou autres facteurs d'ajustement qui ont servi à obtenir le total. Il est probable que les résultats en sont généralement moins exacts que ceux d'un recensement ou d'un sondage systématique de la population.

D: La lettre **D** signifie que le chiffre de population a été obtenu par des méthodes autres que celles qui sont désignées par les lettres **A, B** et **C.** Par exemple, on peut avoir calculé l'effectif de la population en multipliant la superficie des terres habitées, le rendement de l'impôt sur le sel, etc., par un coefficient qui est censé représenter le rapport entre la population et les unités mesurées. Dans les estimations de cette nature, la marge d'erreur peut être considérable.

Nature des données de base inconnue: Deux points de suspension (. .) désignent les données de base dont la nature n'a pas été déterminée. Dans ces cas-là, le code ne comporte aucun autre élément, sauf s'il vise une estimation non officielle dont l'ajustement chronologique a été tiré d'estimations régionales.

Le deuxième élément du code consiste en un indice numérique représentant le nombre d'années écoulées depuis que des données de base ont été établies pour la dernière fois. Par exemple, si le dernier recensement a eu lieu à un moment quelconque dans l'année 1950, on peut dire, en arrondissant, que neuf années se sont écoulées entre la date de ce recensement et le milieu de l'année 1959 — date des estimations courantes publiées dans le présent *Annuaire;* la lettre majuscule du code est suivie de l'indice 9. L'indice 0 signifie que les données de base ont été recueillies soit en 1959 soit en 1960 et cela que l'estimation de 1959 ait été revisée en conséquence ou que l'on ait jugé qu'aucune revision ne s'imposait. Il est évident que plus il s'est écoulé de temps depuis le dernier comptage de la population, plus grandes sont les erreurs qui risquent de s'être accumulées dans l'estimation courante en raison des imperfections de la méthode d'ajustement chronologique.

Le troisième élément du code — une minuscule romaine — désigne le procédé employé pour ajuster les données de base à la date considérée. Les lettres **a, b, c** et **d** s'appliquent aux estimations officielles pour lesquelles la méthode d'ajustement chronologique est connue. La lettre **x** s'applique aux estimations non officielles faites par l'ONU. Quand la méthode d'ajustement chronologique n'est pas connue, on l'indique par deux points de suspension (. .).

[11] Voir *Manuel des méthodes de recensement de la population,* vol. I, *op. cit.,* p. 4.

a: La lettre **a** signifie que l'estimation courante a été établie directement d'après les données d'un registre de population permanent, c'est-à-dire d'un registre complet des individus ou des ménages à l'aide duquel on peut établir une balance à des intervalles de temps appropriés, généralement à la fin de l'année civile. Tenir un registre de population consiste essentiellement à établir une fiche d'état civil pour chaque individu vivant sur le territoire à un moment donné, à ajouter de nouvelles fiches à l'occasion des naissances et des entrées et à en retirer à l'occasion des décès et des sorties. Les estimations courantes établies par cette méthode sont parfois d'un très haut degré d'exactitude, en particulier lorsque le registre est vérifié par recoupements à l'aide des bulletins de recensement en vue d'éliminer les fiches erronées qui ont pu s'accumuler. Par conséquent, bien que les estimations courantes soient établies directement à partir du registre, la nature et la date des dénombrements de base effectués indépendamment demeurent importantes.

b: La méthode d'ajustement chronologique est désignée par la lettre **b** lorsqu'on a tenu compte, pour mettre les données de base à jour, du nombre des naissances et des décès enregistrés (accroissement naturel) et peut-être aussi de celui des entrées et des sorties (migration nette) pour mettre à jour le chiffre de la population de base. Si, dans chaque cas, l'enregistrement est complet et exact, cette méthode de calcul permet d'établir des estimations de bonne qualité, puisqu'il est effectivement tenu compte de tous les éléments du mouvement général de la population. Cependant, l'ampleur des migrations nettes par rapport à l'effectif de la population varie d'un pays à l'autre. Il s'ensuit que, pour certains pays, il importe peut-être beaucoup de tenir compte des mouvements migratoires tandis que, pour d'autres, l'erreur introduite dans les estimations lorsqu'il n'en est pas tenu compte est faible ou négligeable.

c: Lorsque le mouvement général de la population est estimé et non calculé à partir des données d'enregistrement, la méthode d'ajustement chronologique est désignée par la lettre **c**. Toute estimation du mouvement de la population repose nécessairement sur une hypothèse (taux observé dans la même population au cours d'une période passée ou observations faites dans une autre population), quelle que soit la formule mathématique employée. Il n'y a pas de raison a priori pour considérer que telle hypothèse est plus valable que telle autre. Il est vraisemblable que l'hypothèse retenue pour établir les estimations officielles de population, compte tenu des circonstances particulières à chaque cas, sera normalement une hypothèse qui paraît assez raisonnable ou plausible. Mais l'élément de jugement qui intervient ne peut pas être apprécié objectivement. Il peut arriver que des estimations de population fondées sur une hypothèse judicieusement choisie, pour ce qui est du mode d'accroissement, soient aussi exactes que des estimations mises à jour à l'aide des données sur l'accroissement naturel et la migration nette, du moins lorsque l'enregistrement de ces phénomènes est visiblement déficient. Cependant, vu l'arbitraire que comporte inévitablement le choix d'une hypothèse apparemment valable, un ajustement chronologique du type **c** ne pourra jamais présenter les mêmes garanties qu'un ajustement du type **b**, du moins lorsque, pour ce dernier, l'enregistrement du mouvement de la population est relativement exact.

d: Si le chiffre de base reste constant pendant deux ou plusieurs années consécutives, c'est qu'il est vraisemblable que l'on n'a pas cherché à le mettre à jour; en pareil cas, c'est la notation **d** qui est employée. Sauf dans le cas très rare des populations presque stationnaires, les estimations de ce genre sont considérées comme moins sûres que celles qui reposent au moins sur l'hypothèse d'un taux de variation vraisemblable.

x: Faute d'estimations officielles, c'est le Secrétariat de l'ONU qui établit les estimations de la population pour l'année considérée. Dans les cas de ce genre, la méthode d'ajustement chronologique consiste à prendre pour le taux d'accroissement de la population d'un territoire donné une valeur en rapport avec le taux d'accroissement observé dans une région plus vaste dont le territoire fait partie[12]. Comme il n'est fait aucune étude approfondie des conditions particulières au territoire, cet ajustement chronologique, désigné par **x**, est souvent moins conforme à la réalité qu'un ajustement reposant sur un taux présumé calculé par les services compétents du territoire (notation **c**). En revanche, les estimations obtenues sont probablement plus exactes que celle où l'on n'a cherché à faire aucun ajustement chronologique (notation **d**).

Méthode d'ajustement inconnue: Lorsqu'on ne peut déterminer la méthode d'ajustement chronologique employée, tout en sachant de quelle manière le chiffre de base a été établi, on l'indique par deux points de suspension (**..**) placés après les premier et deuxième éléments du code. Si le chiffre de base est très récent, il y a parfois lieu de supposer que la méthode d'ajustement chronologique n'a pas encore été arrêtée, mais qu'elle apparaîtra les années suivantes.

Le quatrième élément du code se compose d'un indice numérique dont l'objet est de préciser davantage la méthode d'ajustement chronologique employée, sauf dans les cas où elle n'est pas déterminée (notation **..**), dans les cas où l'estimation est non officielle (notation **x**), ou dans les cas où il n'y a pas eu d'ajustement (**d**). Trois classes sont prévues pour l'ajustement d'après un registre de population permanent (notation **a**) et d'après l'équation d'équilibre [accroissement naturel avec ou sans balance des migrations (notation **b**)]; trois autres classes sont prévues pour l'ajustement d'après un taux d'accroissement présumé (notation **c**).

[12] Cette méthode est exposée dans : ONU, Service de la population, *Accroissement de la population mondiale dans l'avenir*, document ST/SOA/SER.A/28, 1958, p. 20 (No de vente : 58.XIII.2).

Notation **a** *ou* **b** *: méthode du registre de population ou de l'accroissement naturel*

1: L'indice 1 signifie qu'il est dûment tenu compte des naissances, des décès, de l'immigration et de l'émigration. En d'autres termes, même avec une combinaison extrême d'erreurs dans les quatre éléments de la balance, l'erreur globale ne dépassera probablement pas 5 pour mille par année de la période sur laquelle porte l'ajustement.

2: L'indice 2 est utilisé lorsque la méthode de calcul est de qualité inconnue.

3: L'indice 3 est employé lorsque des tests ou des calculs indépendants indiquent que l'erreur peut dépasser 5 pour mille par année de la période en question.

Notation **c** *: méthode du taux d'accroissement présumé*

Lorsque l'ajustement chronologique repose sur un taux d'accroissement présumé, la possibilité de choisir judicieusement une hypothèse raisonnable dépend largement de la fréquence et de la périodicité des recensements précédents. Lorsque les recensements ont eu lieu à des intervalles ne dépassant pas dix ans, l'ajustement a des chances d'être relativement plus exact.

1: La notation 1 est utilisée lorsque l'estimation courante a été précédée d'au moins deux recensements, à intervalle de 10 ans ou moins. Les recensements décennaux sont parfois retardés d'un an ou deux; le code en tient compte lorsqu'il y a lieu.

2: L'annotation 2 est employée lorsqu'il y a eu deux ou plusieurs recensements mais que plus de dix ans se sont écoulés, soit entre les dates des deux derniers recensements, soit entre le dernier recensement et la date de l'estimation.

3: L'annotation 3 signifie qu'il n'y a eu qu'un recensement ou qu'il n'y en a pas eu du tout. En ce cas, il est vraisemblable que le taux présumé d'accroissement de la population repose sur des éléments assez douteux. Les données de base obtenues par des méthodes autres que le recensement n'offrent ordinairement pas la comparabilité nécessaire au calcul d'un taux d'accroissement valable.

Evaluation des séries chronologiques

Le code décrit ci-dessus a été conçu principalement pour évaluer l'exactitude probable des estimations de la population totale à une date récente (milieu de l'année 1959 dans le cas présent); il n'apparaît que dans le tableau 1. Cependant, comme il y a généralement une certaine continuité dans la manière dont les pays établissent leurs estimations de population d'une année à l'autre, le code peut aussi s'appliquer dans une certaine mesure aux estimations relatives à d'autres années récentes. Mais, s'il s'agit d'une série chronologique d'estimations de population, non seulement le degré d'exactitude de telle ou telle estimation, mais encore la fidélité avec laquelle les mouvements annuels de la population sont traduits, présentent un intérêt. Aussi, pour apprécier la valeur statistique des séries chronologiques, il convient d'accorder une plus grande attention à la méthode d'ajustement chronologique et à la qualité de l'ajustement.

On a d'abord classé les estimations présentées dans le tableau 4 selon que les dernières estimations courantes étaient fondées sur un recensement complet de la population (**A**), sur un recensement par sondage (**B**), sur un recensement partiel ou de portée limitée (**C**) ou sur des conjectures (**D**). On a admis que celles qui étaient fondées sur un recensement de la population, qu'il s'agisse d'un dénombrement complet ou d'un dénombrement par sondage, étaient plus exactes que celles qui reposaient sur les résultats d'un recensement partiel ou sur des conjectures.

Les estimations établies sur la base des résultats d'un recensement ont ensuite été classées d'après la méthode d'ajustement chronologique utilisée. L'ajustement chronologique a été jugé satisfaisant lorsque l'extrapolation reposait sur la méthode du registre de population ou de l'équation d'équilibre (notations **a** et **b**) à condition toutefois qu'il ait été dûment tenu compte des composantes du facteur d'ajustement. On estime qu'il n'en est ainsi que dans les cas $\mathbf{b}_1$ et $\mathbf{b}_2$, c'est-à-dire lorsque l'on sait que les statistiques de l'état civil sont complètes ou que le territoire considéré est une petite île où les risques d'erreur sont vraisemblablement faibles. En outre, quelques rares estimations (5) reposant sur les résultats d'un dénombrement courant qui n'a pas été effectué dans le cadre d'un recensement de la population ou d'une enquête démographique ont été considérées comme satisfaisantes du fait qu'elles se rapportaient à des populations peu nombreuses.

Conformément à la méthode ci-dessus, on a classé les séries selon la qualité de l'estimation la plus récente — c'est-à-dire l'estimation pour 1959 ou 1958. Si l'on admet que cette évaluation vaut également pour les années immédiatement antérieures à 1958 ou 1959, on peut dire que l'on dispose d'une évaluation pour la période comprise approximativement entre 1955 et 1959.

Pour déterminer si l'évaluation relative à ces cinq dernières années correspond à celle des premières années de la série, on a pris pour base l'évaluation des estimations pour 1949-1951, publiée dans l'*Annuaire démographique* de 1952. D'après ce texte (page 54), l'association de R, A et B, avec 0, 1 et 2 du code utilisé à l'époque indiquait qu'il s'agissait d'estimations relativement sûres. L'analyse des estimations courantes considérée comme satisfaisante selon le code de 1952 a montré que le système d'évaluation de cette époque avait tendance à exagérer le nombre des séries satisfaisantes. Il en résulte que les séries ne sont pas homogènes et que, dans un certain nombre de cas, quelques-unes, actuellement considérées comme satisfaisantes, étaient encore "mauvaises" en 1952[13]. On notera toutefois que les données codées maintenant comme "moins sûres" étaient estimées "peu sûres" en 1952. Il est donc évident que les séries "sûres" le sont plus ou moins, que leur nombre est peut-être un peu exagéré et que, pour les premières années, beaucoup d'entre elles étaient bien moins sûres que le code ne semble l'indiquer.

L'application de tous ces facteurs a permis de faire le départ entre les estimations discutables et les autres.

[13] Ces séries se rapportaient aux pays et territoires ci-après : Albanie, Argentine, Bahama, Berlin-Ouest, Bulgarie, Chili, Chine (Taïwan), Costa Rica, Gibraltar, Groenland, Guatemala, Guyane britannique, Hongrie, Iles Cayman, Ile Christmas, Iles Cocos (Keeling), Iles Cook, Ile Maurice, Ile Norfolk, Jamaïque, Malte et Gozo, Nauru, Niue, Sainte-Hélène, Samoa américain, Samoa occidental, Singapour et Tonga.

Dans les tableaux 4 et 5, les estimations jugées discutables d'après la manière dont elles ont été établies sont reproduites en italique. Cette classification n'emporte aucun jugement sur l'exactitude des renseignements concernant des caractéristiques telles que l'âge; le lecteur verra à la page 65 ce qu'on a essayé de faire à ce sujet.

Il convient de souligner que cette classification est à proprement parler expérimentale; la documentation réunie et les observations faites d'une édition de l'*Annuaire démographique* à l'autre devraient permettre, on l'espère, de préciser la distinction. Cependant, il ne faut pas oublier les servitudes qu'imposent les techniques d'imprimerie pour ce genre d'indications visuelles; en outre, il est souhaitable, de toute façon, de n'utiliser qu'un minimum de catégories afin que leur signification apparaisse immédiatement au lecteur.

STATISTIQUES DE L'ETAT CIVIL

Aux fins de l'*Annuaire démographique,* on entend par statistiques de l'état civil les statistiques des naissances vivantes, des décès, des morts fœtales, des mariages et des divorces. Cela est conforme au Principe 201 du document de l'ONU intitulé *Principes directeurs d'un système de statistiques de l'état civil*[14] où les statistiques de l'état civil sont définies comme comprenant aussi les adoptions, les légitimations, les reconnaissances, les annulations et les séparations légales.

Les facteurs qui influent sur la comparabilité internationale des statistiques de l'état civil sont à peu près les mêmes que ceux qu'il convient de prendre en considération pour interpréter les variations observées dans les statistiques de la population. La portée des données du point de vue géographique et ethnique, la qualité des statistiques — c'est-à-dire leur degré de complétude —, les méthodes d'exploitation et la définition des faits d'état civil aux fins de la statistique sont autant d'éléments qui peuvent influer sur la comparabilité.

Les normes à observer pour améliorer les statistiques de l'état civil, notamment en ce qui concerne les facteurs susmentionnés, sont énoncées dans *Principes directeurs d'un système de statistiques de l'état civil*[15]. Grâce à la publication d'un *Manuel de statistique de l'état civil*[16], ces recommandations internationales pour l'amélioration et la normalisation des statistiques de l'état civil ont encore gagné en utilité et sont plus faciles à appliquer dans les divers pays. Ce *Manuel* traite également des sources d'erreur dans les statistiques de l'état civil; on trouvera ci-après un bref exposé sur cette question mais il conviendra de se reporter au *Manuel* pour plus de détails.

SOURCES DE VARIATIONS

Portée géographique et ethnique restreinte

Bien que l'Organisation des Nations Unies ait recommandé d'établir par priorité des statistiques des naissances vivantes, des décès, des morts fœtales, des mariages et des divorces, ces statistiques sont loin d'être disponibles partout dans la même mesure[17]. Cela tient en partie au manque d'uniformité et d'universalité des législations nationales. Dans certains pays ou territoires, l'enregistrement n'est obligatoire que pour les naissances et les décès; dans d'autres, il ne l'est que pour une partie de la population (par exemple, population européenne, civilisée ou non indigène). Dans d'autres pays encore, tels que l'Inde et le Pakistan, il n'existe pas de disposition qui prescrive l'enregistrement obligatoire sur le plan national, mais seulement des règlements ou décrets des municipalités ou des Etats, qui ne s'appliquent pas à l'ensemble du pays. Il en est encore autrement dans d'autres pays (comme l'Indonésie) où les autorités ont institué des zones d'enregistrement comprenant seulement une partie du territoire, le reste étant exclu en raison des difficultés d'accès ou parce qu'il est pratiquement impossible, pour des raisons d'ordre économique ou culturel, d'y procéder à un enregistrement régulier.

En examinant les tableaux, on remarquera que l'enregistrement des faits d'état civil est particulièrement fragmentaire en Afrique où il ne porte le plus souvent que sur la population européenne, tandis que la population indigène ne fait généralement l'objet que de quelques statistiques ou d'estimations partielles. De même, pour une grande partie de l'Asie et pour certaines régions de l'Amérique latine, les statistiques sont incomplètes, peu sûres et de portée inégale. Lorsque les statistiques disponibles sont fragmentaires, la comparabilité internationale s'en trouve sérieusement compromise.

Qualité des statistiques

La qualité des données varie non seulement parce que dans certains pays il n'existe pas de disposition qui prescrive l'enregistrement des faits d'état civil, mais aussi par suite de différences d'efficacité, d'un pays à l'autre, dans l'application des lois. Les modalités d'application de la loi et son degré d'observation par le public déterminent l'exactitude et la complétude des statistiques tirées des registres de l'état civil.

Evaluation des statistiques courantes

Les imperfections des statistiques de l'état civil apparaissent souvent de manière assez, évidente, surtout lorsque les statistiques sont présentées sous forme de taux. Toutefois, on risque d'arriver à des résultats très trompeurs si l'on évalue la qualité des données en se fondant uniquement sur les séries présentées dans les tableaux. Pour recueillir à ce sujet des renseignements de première main, l'Organisation des Nations Unies, en 1956, a demandé à chaque pays des estimations de la complétude et de l'exactitude des données inscrites dans les questionnaires annuels qui servent à l'élaboration de l'*Annuaire démographique*. La documentation ainsi recueillie a été, depuis, systématiquement complétée et tenue à jour au moyen des nouveaux renseignements sur la qualité des

[17] On trouvera une analyse, par région, de la portée géographique et ethnique des statistiques de la natalité et de la mortalité dans l'*Annuaire démographique* de 1956, chap. I, tableau J, p. 76.

statistiques. D'après les renseignements directement fournis par les gouvernements, ou tirés de publications officielles, il a été possible de classer les statistiques de l'état civil en trois grandes catégories:

C Celles qui sont signalées comme relativement complètes, c'est-à-dire qui représentent dans la proportion d'au moins 90 pour cent les faits d'état civil survenus chaque année.

U Celles qui sont signalées comme discutables, c'est-à-dire qui englobent moins de 90 pour cent des faits considérés.

... Celles sur lesquelles il n'a pas été possible d'obtenir des renseignements précis.

La formule adoptée pour classer les données selon leur degré d'exactitude ne permettait pas d'appliquer des critères uniformes et objectifs. Dans bien des cas, on ne savait pas quels éléments d'appréciation les services nationaux avaient utilisés. Néanmoins, on a estimé que les bureaux de statistique nationaux étaient les mieux placés pour évaluer la qualité de leurs propres données et que, malgré leur étendue, les catégories C et U qu'il a été possible de distinguer seraient utiles, puisqu'elles donneraient au moins une idée de la valeur des statistiques publiées dans l'*Annuaire*.

Les résultats de ce classement (notations C, U ou ...) figurent dans la première colonne des tableaux 13, 15, 16, 17, 20 et 22, qui indiquent, pour une longue période, la fréquence totale des naissances vivantes, des décès a tous âges, des décès d'enfants de moins de 1 an, des morts fœtales, des mariages et des divorces. On trouvera aussi au bas des tableaux des notes indiquant, lorsqu'ils sont connus, les éléments précis sur lesquels se fonde le classement codé.

Non seulement tous les tableaux retraçant une évolution de longue période comprennent une colonne où figurent les notations du code de qualité, mais, les données classées dans la catégorie U et celles dont le degré d'exactitude n'est pas connu (...) sont reproduites en italique afin que l'on puisse les distinguer aisément des données moins sujettes à caution.

Evaluation des séries chronologiques

Il est plus difficile d'évaluer la qualité des séries chronologiques des statistiques de l'état civil. Les estimations de la qualité courante reposant en général largement sur des conjectures, on manque le plus souvent d'évaluations objectives pour les années antérieures. En l'absence de mesures de qualité pour les années précédentes, on a admis que la qualité de la série chronologique tout entière serait la même que celle des données courantes; c'est pourquoi les séries chronologiques sont reproduites en italique lorsque le code de l'année en cours est U (discutable) ou ... (inconnu).

Cette méthode n'est certes pas entièrement satisfaisante (les données des premières années étant souvent beaucoup plus sujettes à caution que le code ne l'indique) mais comme on a jugé souhaitable d'identifier plus clairement les données discutables et que l'emploi du code à cette fin ne peut conduire qu'à surestimer plutôt qu'à sous-estimer la qualité des données, c'est d'après ce code, malgré ses insuffisances, que l'on a décidé d'établir le classement. De même, on a cru bon d'admettre que les données dont le degré de complétude est encore inconnu peuvent être considérées comme discutables et reproduites en italique, comme celles qui sont classées dans la catégorie U.

A proprement parler, le code de qualité s'applique aux nombres absolus de faits d'état civil enregistrés et, par conséquent, ne vaut qu'indirectement pour les taux qui dépendent également des chiffres de population servant de dénominateurs. Toutefois, il importe de souligner que les deux éléments constitutifs d'un taux ne sont pas indépendants, surtout lorsque ce sont les statistiques de l'état civil qui ont servi à établir les estimations de population. Par conséquent, les taux établis à partir de statistiques discutables sont classés dans la catégorie des données discutables, bien qu'ils puissent paraître vraisemblables, pour une raison ou pour une autre. Il est possible d'évaluer plus justement la qualité des taux courants en examinant aussi les notations relatives aux estimations de population qui sont présentées dans le tableau 1 et ailleurs.

Méthodes d'exploitation des données

Population présente

Conformément à la partie *c*) du Principe 409[18], les statistiques de l'état civil présentées dans l'*Annuaire* se rapportent à la population de fait ou population présente. Sauf indication contraire, ces statistiques comprennent donc les faits survenus dans l'ensemble de la population, à l'intérieur des frontières actuelles des pays et territoires considérés. Les notes servent uniquement à signaler des exceptions, sauf dans le cas des décès de militaires; pour plus de clarté, les conditions dans lesquelles il est tenu compte de ces décès sont précisées autant que possible, qu'elles constituent ou non une exception à la norme.

Il est reconnu dans les Principes 402 et 403[19] que, du point de vue national, il est nécessaire de distinguer entre les statistiques selon qu'elles se rapportent à des régions ou à des groupes de population pour lesquels l'enregistrement des faits d'état civil est raisonnablement complet ou nettement incomplet. Conformément à ces principes, les statistiques de certains pays font régulièrement abstraction des groupes de population pour lesquels l'enregistrement, bien qu'obligatoire, n'est pas même raisonnablement complet et les statistiques, par conséquent, très sujettes à caution. Parmi ces pays, on peut citer le Panama et le Venezuela où les statistiques de l'état civil ne tiennent pas compte des données relatives aux tribus indiennes; le Pérou, où la population de la jungle n'est pas comptée; la Guyane britannique, le Surinam, la Syrie et l'Australie, qui excluent de leurs statistiques les nomades aborigènes. Tous les cas de ce genre, où les statistiques ne portent que sur une partie du territoire national ou de la population du pays, sont indiqués en note dans les tableaux.

---

[18] "En général, l'exploitation des données de base relatives au territoire national doit porter sur les faits qui se sont produits à l'intérieur des frontières nationales; toutefois, dans certains cas, par exemple en temps de guerre, il peut être nécessaire de prévoir que l'exploitation des données comprendra également les décès survenus parmi les militaires hors du territoire national."

[19] *Principes directeurs d'un système de statistiques de l'état civil, op. cit.*, p. 20.

Exploitation des données selon la date de l'événement ou la date de l'enregistrement

Autant que possible, les statistiques de l'état civil figurant dans l'*Annuaire* correspondent aux événements survenus pendant l'année indiquée et non aux faits enregistrés au cours de cette année. Cela est conforme à la recommandation que l'Organisation des Nations Unies a faite à ce sujet dans les *Principes*[20].

Symbole: On pourra toutefois constater dans les tableaux que, malgré cette recommandation internationale, un grand nombre de pays exploitent leurs statistiques selon la date de l'enregistrement et non selon la date de l'événement; en outre, rares sont ceux qui ont analysé les résultats ainsi obtenus pour déterminer s'ils correspondent bien au niveau de la natalité ou de la mortalité. Comme ces statistiques risquent d'induire gravement en erreur, les pays dont on sait qu'ils établissent leurs statistiques d'après la date de l'enregistrement sont désignés dans les tableaux par une croix (†). L'absence de croix indique donc que les données ont été exploitées selon la date de l'événement mais, comme on n'a pas de renseignements complets, c'est sans doute surestimer l'importance de cette catégorie de données que d'interpréter toujours ainsi l'absence de ce symbole.

Conséquences sur la comparabilité: Si l'enregistrement se fait dans un délai très court, la différence entre les statistiques établies selon les deux méthodes peut être négligeable. Le seul facteur qui limite la comparabilité en pareil cas est la durée des délais légaux accordés pour l'enregistrement courant des faits d'état civil, durée qui varie beaucoup d'un pays à l'autre.

Toutefois, si les déclarations tardives sont nombreuses, les statistiques de l'état civil exploitées selon la date de l'enregistrement ne sont pas comparables sur le plan international. Dans les meilleures conditions, les statistiques exploitées selon la date de l'enregistrement comprendront surtout des faits survenus au cours de l'année précédente; dans les pays où le système d'enregistrement n'est pas très développé, elles comprendront bien des événements survenus plus longtemps auparavant. Il ressort de documents concernant les Etats-Unis, le Costa-Rica, le Chili et la République Dominicaine que des retards de 20 à 25 ans dans l'enregistrement des naissances ne sont pas rares bien qu'en général la déclaration se fasse de deux à quatre ans après l'événement. Au fur et à mesure que l'enregistrement deviendra plus complet et se fera plus promptement, les données exploitées selon la date de l'enregistrement se rapprocheront davantage de la réalité pour l'année considérée, mais, en attendant, les statistiques fondées sur les données d'enregistrement ne seront pas comparables sur le plan international.

Il convient également de noter que l'exploitation des données selon la date de l'enregistrement ne compromet pas seulement la comparabilité internationale des statistiques. Même à l'intérieur d'un même pays, ce procédé met en cause la comparabilité des chiffres sur une longue période. Si le nombre des faits d'état civil enregistrés varie dans une mesure quelconque d'une année à l'autre (par suite de la mise en vigueur de mesures destinées spécialement à encourager l'enregistrement ou exigeant la production d'un certificat de naissance ou de décès pour l'accomplissement de certaines formalités), les statistiques de l'état civil établies d'après la date de l'enregistrement ne permettent pas de mesurer le niveau réel de la natalité ou de la mortalité; elles ne peuvent pas davantage fournir d'indications sur la tendance. Tout ce qu'elles peuvent faire, c'est montrer que les conditions d'exigibilité du certificat de naissance, de décès ou de mariage n'ont pas été uniformes.

D'autre part, si la complétude de l'enregistrement, au lieu d'être erratique, est constante d'une année à autre, et va en fait en s'améliorant, l'augmentation apparente des taux de natalité et de mortalité peut faire croire à des variations de l'incidence des naissances et des décès. Dans les deux cas, les statistiques des naissances et des décès enregistrés ne présentent qu'une utilité très réduite pour des études nationales ou internationales.

Définition des faits d'état civil aux fins de la statistique

Les diverses définitions adoptées aux fins de la statistique des faits d'état civil expliquent aussi — bien qu'elles jouent un rôle moins important — le défaut de comparabilité que peuvent présenter les données. Il est important par exemple d'énoncer un critère uniforme et précis permettant de distinguer, du point de vue statistique, les morts fœtales des naissances vivantes. Cette condition est particulièrement importante pour assurer la comparabilité des statistiques des naissances vivantes, des décès à tous âges, des décès d'enfants de moins d'un an et des morts fœtales dont on peut trouver une évaluation dans le *Manuel de statistique de l'état civil,* chapitre IV. On peut également trouver dans le *Manuel* les définitions dont l'usage a été recommandé sur le plan international.

Le manque d'uniformité des définitions utilisées par les statisticiens a aussi des répercussions sur la comparabilité des statistiques de la nuptialité et de la divortialité. Bien que le mariage et le divorce soient des actes de caractère juridique plutôt que des faits biologiques, ce qui limite les possibilités de variation des définitions, les différences de concepts d'un pays à l'autre influent sur la qualité des statistiques. On trouvera plus de détails à ce sujet dans l'*Annuaire démographique* de 1958, qui est spécialement consacré aux statistiques de la nuptialité et de la divortialité.

STATISTIQUES DES NAISSANCES VIVANTES

Comme la présente édition de l'*Annuaire* porte essentiellement sur l'évolution de la population, on a limité les statistiques de la natalité aux données essentielles pour lesquelles la continuité est nécessaire d'année en année, c'est-à-dire aux séries chronologiques et aux naissances classées selon l'âge de la mère. On trouvera ces données aux tableaux 13 et 14 respectivement.

Pour l'établissement de ces tableaux, la naissance vivante a été définie conformément à la définition internationale donnée dans les *Principes directeurs* d'un système de statistiques de l'état civil[21] et dans l'*Annuaire démographique* de 1959. Les divergences entre les données sont brièvement examinées à propos des tableaux 13 et 14; en ce qui concerne les limitations générales des statistiques de la natalité, voir l'*Annuaire démographique* de 1959, consacré spécialement aux statistiques de la natalité.

[20] *Ibid.*, p. 21.

[21] *Ibid.*, Principe 202.

STATISTIQUES DES MORTS FŒTALES

Dans la présente édition de l'*Annuaire,* il y a un seul tableau statistique relatif aux morts fœtales tardives; c'est le tableau 17, qui donne les nombres absolus et les taux depuis 1950.

La définition de la mort fœtale qui sert de base pour l'établissement des statistiques est celle qui est recommandée dans les *Principes directeurs d'un système de statistiques de l'état civil*[22] et dans l'*Annuaire démographique* de 1959, consacré aux statistiques de la natalité. Les conséquences des variations de définition et des autres facteurs qui limitent la comparabilité sont brièvement examinées à propos du tableau 17; pour plus amples détails, voir l'*Annuaire démographique* de 1959.

STATISTIQUES DE LA MORTALITE

Les statistiques de la mortalité (à l'exclusion des morts fœtales) occupent les tableaux 15, 16, 18 et 19. L'évolution des décès à tous les âges et des décès d'enfants de moins d'un an — avec les taux bruts correspondants — est retracée dans les tableaux 15 et 16. Les décès par âge et par sexe et les décès selon la cause figurent dans les tableaux 18 et 19.

La définition du "décès" sur laquelle reposent les statistiques est celle que l'ONU a recommandée dans les *Principes directeurs d'un système de statistiques* de l'état civil[23]. Les effets des différences de définition ainsi que les autres facteurs qui limitent la comparabilité sont examinés brièvement à propos de chaque tableau; pour plus de détails, voir l'*Annuaire démographique* de 1957, qui est principalement consacré aux statistiques de la mortalité.

STATISTIQUES DE LA NUPTIALITE

On trouvera dans la présente édition de l'*Annuaire* des statistiques sur l'évolution de la nuptialité et sur la répartition des mariages selon l'âge du mari et de la femme.

Conformément aux recommandations formulées dans les *Principes directeurs d'un système de statistiques de l'état civil*[24], ces statistiques se rapportent, sauf indication contraire, aux mariages officiels ou unions légales. Les effets des différences de définition, ainsi que les autres facteurs qui limitent la comparabilité, sont examinés brièvement à propos des tableaux 20 et 21; pour une étude plus détaillée de ces facteurs, voir la page 59 de l'*Annuaire démographique* de 1958 dont le sujet spécial était la nuptialité.

[22] *Ibid.,* Principe 202.
[23] *Ibid.,* Principe 202.
[24] *Ibid.,* Principe 202.

STATISTIQUES DE LA DIVORTIALITE

Les séries chronologiques de statistiques relatives aux dissolutions de mariages pour cause de divorce sont présentées dans le tableau 22. Sauf indication contraire, la définition du divorce utilisée pour établir ces statistiques est celle que l'Organisation des Nations Unies a recommandée dans les *Principes directeurs d'un système de statistiques de l'état civil*[25].

Les effets des différences de définition ainsi que les autres facteurs qui limitent la comparabilité sont étudiés brièvement à propos du tableau 22; pour un examen plus détaillé de ces facteurs, voir les pages 59 et 60 de l'*Annuaire démographique* de 1958, où les statistiques de la divortialité occupaient une place spéciale.

TABLES DE MORTALITE

Les tables de mortalité reposent sur les conditions de mortalité observées pendant une certaine période, mais elles permettent d'analyser les incidences et les perspectives correspondant à ces conditions de manière plus détaillée que les taux classiques de mortalité.

Bien que les tables de mortalité aient d'abord été construites en vue de calculs actuariels, elles ont de nombreuses applications dans le domaine démographique, par exemple: 1) la prévision de la composition de la population par âge et par sexe; 2) l'analyse des incidences de la mortalité sur la répartition par âge et par sexe d'une population donnée; 3) la comparaison des mesures sommaires de mortalité telles que les quotients de mortalité (réciproques de l'espérance de vie à la naissance), l'espérance de vie à différents âges, etc.; 4) le calcul des taux nets de reproduction; 5) l'évaluation de l'exactitude des recensements et de l'enregistrement des faits d'état civil. En outre, la technique des tables de mortalité a été appliquée à l'analyse d'autres genres de données démographiques, par exemple au calcul des probabilités de mariage, par âge et par sexe, sur la base des données de recensement classées selon l'état matrimonial.

Normalement, les valeurs de trois fonctions principales sont publiées dans *l'Annuaire démographique*: 1) la probabilité de décès dans le délai d'un an ou dans un intervalle d'âge déterminé pour les personnes d'un âge donné (q_x); 2) le taux de survie au début de chaque intervalle d'âge pour une cohorte de 100 000 individus (l_x); et 3) l'espérance moyenne de vie ou nombre moyen d'années restant à vivre pour les personnes d'un âge donné ($\mathring{e}_x$). Seule la dernière fonction est donnée dans la présente édition. Pour tout ce qui a trait à cette fonction et aux autres valeurs ainsi qu'à la construction des tables de mortalité en général, voir l'*Annuaire démographique* de 1957, pages 95-96.

[25] *Ibid.,* Principe 202.

Tableau 1

On trouvera dans ce tableau les résultats des derniers recensements de population, avec répartition selon le sexe, les estimations établies pour 1953 et 1959 (en milliers), des indications sur le type des estimations pour 1959 (voir page 66), le taux d'accroissement annuel moyen de la population (positif ou négatif) en pourcentage pour la période de 1953 à 1959, ainsi que la superficie actuelle et la densité de population de chaque pays et de chaque territoire.

Les pays et les territoires sont classés par continents, dans l'ordre suivant: Afrique, Amérique du Nord, Amérique du Sud, Asie, Europe et Océanie; l'URSS est citée en dernier, puisqu'elle se trouve partiellement en Europe et partiellement en Asie. A l'intérieur de chaque continent, viennent d'abord les Etats souverains, énumérés dans l'ordre alphabétique anglais, puis les territoires non souverains classés sous le nom de l'autorité administrante et distingués, par leur statut administratif, en dépendances, territoires sous tutelle, condominiums, zones sous administration militaire, etc. Ce classement correspond autant que possible à la situation au 31 décembre 1960. Avec les notes abondantes qui définissent les divers territoires d'une manière beaucoup plus détaillée que n'importe où ailleurs dans l'*Annuaire,* il fait du tableau 1 le tableau de référence de tout le volume pour ce qui est de la souveraineté, et de la composition territoriale. Ce tableau est également à consulter pour la nomenclature anglaise et française car les noms de pays y sont donnés sous leur forme officielle la plus récente[26].

Sauf indication contraire, les données de recensement et les estimations se rapportent les unes et les autres à la population présente "rectifiée" qui est définie à la page 67.

Autant que possible, les chiffres inscrits dans la colonne recensements du tableau 1 sont les résultats de dénombrements[27] ou d'enquêtes par sondage conçues pour permettre de déterminer l'effectif de la population. Il est tenu compte de ces recensements ou enquêtes même s'ils ne sont pas de portée nationale; ils peuvent n'englober qu'une partie du territoire ou qu'une fraction de la population et comporter une erreur par défaut plus ou moins grande. On a indiqué en note, le cas échéant, les estimations pour les groupes non recensés ainsi que les évaluations relatives aux lacunes du dénombrement.

Le tableau 1, où sont réunis les résultats de tous les recensements, constitue un bilan général des recensements effectués récemment dans le monde. Il permet d'identifier les pays qui n'ont jamais exécuté de recensements, ceux qui ont effectué des recensements limités et ceux qui ont procédé à de véritables recensements de portée nationale. En présentant les résultats des enquêtes par sondage, on a voulu donner les mêmes renseignements en ce qui concerne cette méthode de plus en plus répandue d'estimation de la population et fournir des chiffres de base pour les territoires dont la population n'a jamais été recensée ou n'a pas été recensée récemment.

Sauf indication contraire, les estimations se rapportent à la population au milieu de l'année considérée, c'est-à-dire au 1er juillet. Cependant, lorsqu'il n'existait pas d'estimation établie pour le milieu de l'année, on a fait la moyenne de deux estimations successives de fin d'année (31 décembre) ; aucune distinction n'a été faite entre ces deux catégories d'estimations, les différences en cause étant négligeables.

Lorsqu'on ne disposait pas d'estimations officielles pour le milieu d'une année de recensement, ce sont les résultats du dénombrement que l'on a donnés dans la colonne des estimations, mais on les a inscrits en caractères gras afin que le lecteur puisse les distinguer aisément des estimations au milieu de l'année.

Dans quelques cas, les estimations de populations pour 1959, bien qu'officielles, diffèrent des résultats du recensement de 1960, qui figurent dans une colonne adjacente. Etant donné que les résultats du recensement peuvent être considérés comme provisoires et sujets à revision et que l'estimation n'a pas encore été officiellement démentie, on a joint à cette dernière une note destinée à attirer l'attention sur son caractère provisoire et peut-être même erroné.

Dans un ou deux cas où l'on ne disposait ni d'une estimation officielle de la population ni des résultats d'un recensement, on a reproduit des estimations non officielles pour 1953 et/ou 1959 afin de donner une idée de l'effectif actuel de la population de chaque unité géographique. Ces estimations non officielles sont précédées du signe x ou d'un chiffre renvoyant à une note de bas de page qui indique la source.

C'est dans le tableau 1 que se trouve le code des types d'estimations, dont la composition est exposée en détail à la page 66. Avec les données sur l'erreur par défaut dans les dénombrements, ce code fournit une base à partir de laquelle on peut se faire une idée assez précise de la qualité des estimations de population pour 1959, où qu'elles soient présentées.

On peut estimer qu'il s'applique aussi — avec moins d'exactitude peut-être — aux estimations pour 1953. Sur la base de cette hypothèse et d'autres renseignements (voir page 70) les estimations pour ces deux années ont été classées en exactes ou douteuses, et celles qu'on estime être douteuses sont reproduites en italique.

On a renoncé au codage dans deux cas: lorsqu'on ne disposait pas de données pour la date courante (1959) et lorsque l'estimation comportait addition ou soustraction d'estimations établies par des méthodes différentes pour diverses parties du territoire. Les estimations qui n'ont pas été codées sont signalées par un point (.). Il convient de noter que, si toutes les estimations autres que celles dont il vient d'être question ont été codées, certaines estimations de populations peu nombreuses sont établies par des méthodes qui ne se prêtent pas à ce codage; en outre, l'effectif de certaines populations peu nombreuses subit de violentes fluctuations en raison de la fréquence des entrées et sorties de migrants, de visiteurs, etc., ce qui se traduit par des écarts relativement importants entre population de fait et population de droit, quelles qu'en soient les définitions. Le codage des estimations relatives à certaines populations peu nombreuses ne donne donc pas une bonne indication de leur degré d'exactitude probable.

[26] Voir p. 60.

[27] Pour la définition du recensement et les méthodes de dénombrement, voir : *Manuel des méthodes de recensement de la population,* vol. I, *op. cit.,* p. 4, 97 et 108.

Les données relatives à la superficie — exprimées en kilomètres carrés — correspondent à la superficie totale des unités géographiques considérées, compte tenu des eaux intérieures et des zones inhabitables ou inhabitées que peut comprendre le territoire en question. A quelques exceptions près, les régions entièrement inhabitées, telles que les régions polaires et certaines petites îles, ne sont pas comprises dans les statistiques. Les estimations de superficie sont des chiffres officiels, sauf si elles sont accompagnées du signe x. Les superficies communiquées en milles carrés ont été converties en kilomètres carrés au moyen du coefficient 2,589998.

Portée : Le tableau 1 comprend des données se rapportant à 270 unités géographiques distinctes, c'est-à-dire tous les pays, territoires et parties de territoires comptant au moins 50 habitants. La colonne de gauche de ce tableau est donc la plus complète de l'*Annuaire*.

Les parties de territoires telles que les parties de fédérations ou archipels y figurent lorsqu'on dispose de données séparées à leur sujet. Lorsqu'il n'est pas possible ou pas commode de faire figurer des données pour chacune des parties, des notes expliquent la composition géographique du territoire.

Calcul des taux

Taux d'accroissement: Le taux annuel moyen de variation (en pourcentage) de la population entre 1953 et 1959 a été calculé à partir des données du tableau 1, à l'aide de la formule ci-après:

$$P_1 = P_0 (1 + r)^t \times 100$$

où P_0 représente la population en 1953
P_1 représente la population en 1959
t est égal à 6 (nombre d'années écoulées entre 1953 et 1959), et
r est le taux annuel de variation.

Les estimations du tableau sont exprimées seulement en milliers mais, pour calculer les taux, on a utilisé aussi souvent que possible des nombres à l'unité près. Dans certains cas, cependant, les seules estimations disponibles étaient arrondies au millier, à la centaine de milliers ou au million les plus proches; quand le nombre de chiffres significatifs était si petit que l'erreur pouvait atteindre ±0,5, on l'a indiqué dans une note. Les taux ont été calculés à deux décimales près et arrondis à une décimale pour la présentation.

Aucun taux n'a été calculé pour les populations de moins de 50 000 personnes parce que la variation aléatoire représenterait à elle seule au moins 0,5 pour cent. Une note signale ces cas à l'attention du lecteur. On n'a pas non plus calculé de taux quand les estimations de 1953 et de 1959 étaient identiques jusqu'au chiffre des milliers, même si les nombres, exprimés à l'unité près, différaient quelque peu. En pareils cas, on s'est servi du signe point (.) pour indiquer qu'il n'y avait pas lieu de calculer un taux.

Densité: Sauf indication contraire, la densité est égale au rapport de l'effectif total de la population en 1959 à la superficie totale, exprimée en km². On a calculé cet indice chaque fois que l'on disposait des deux nombres nécessaires. Dans les cas où deux chiffres de superficie sont donnés — l'un se rapportant par exemple à la superficie administrative et l'autre à la superficie habitable — c'est la superficie habitable que l'on a prise comme base de calcul de densité.

Insuffisances des données : Les données contenues dans ce tableau présentent les mêmes insuffisances que les statistiques de population en général, à savoir absence d'uniformité dans les définitions et les méthodes d'exploitation, défauts de complétude du dénombrement de base et différences dans les méthodes d'établissement des estimations; toutes ces questions ont été examinées précedemment à la page 63. Pour aider à évaluer la comparabilité, on a indiqué, lorsqu'on possédait les renseignements voulus, le degré de complétude des recensements de population; d'autre part le lecteur pourra se faire une idée de la valeur des estimations en se reportant au code des types d'estimations ainsi que d'après le caractère employé pour l'impression des chiffres. Pour savoir ce que désignent les termes population présente ou de fait et population légale ou de droit, on se reportera au tableau A, page 62.

Les taux d'accroissement en pourcentage appellent toutes les réserves mentionnées plus haut à propos des estimations de population de base. Dans de nombreux cas, ils représentent seulement le taux qu'il a fallu calculer ou présumer pour établir les estimations elles-mêmes parce qu'on manquait de renseignements satisfaisants sur l'accroissement naturel et les migrations[28]. De plus, lorsqu'il s'agit de populations peu nombreuses, l'erreur aléatoire peut atteindre à elle seule jusqu'à ±0,5. La période de six ans considérée est aussi trop courte pour autoriser des conclusions sur l'évolution à long terme. Néanmoins, ces taux fournissent pour chaque pays et territoire des indications intéressantes qui — utilisées avec les précautions nécessaires — peuvent également servir à évaluer l'exactitude des statistiques de l'état civil et des migrations.

La comparabilité des chiffres de superficie est compromise par tous les facteurs mentionnés à la page 61. Il convient de souligner que les valeurs de la densité de population constituent des indices très approximatifs, car elles ne tiennent pas compte de la dispersion ou de la concentration de la population dans certaines zones particulières du pays ou territoire considéré.

Tableau 2

Ce tableau donne des estimations de population comparables, classées par continent et par région, pour 1920, 1930, 1940, 1950 et 1959, avec le taux d'accroissement annuel pour la période de 1950 à 1959, des estimations des taux moyens de natalité et de mortalité pour la période 1955-1959, la superficie en kilomètres carrés et la densité de population en 1959.

Les estimations de population du tableau 2 ont été établies à partir des données officielles du tableau 1; cependant, les chiffres ont été ajustés pour tenir compte des surestimations ainsi que des erreurs — par défaut ou par excès — qui ont pu fausser les résultats des divers recensements; ils comportent en outre des approximations pour les catégories de personnes qui ne sont pas régulièrement comprises dans les statistiques officielles et des estimations pour les pays qui n'ont pas encore fourni de données officielles pour 1959. En conséquence, les totaux partiels — régionaux ou continentaux — ne

[28] Voir *Annuaire démographique* de 1956, p. 74.

coïncident pas toujours avec la somme des données reproduites dans le tableau 1. En outre, il a fallu recalculer certaines estimations relatives aux autres années, des renseignements recueillis depuis peu conduisant à des résultats différents de ceux qui ont été publiés dans des éditions antérieures de l'*Annuaire*. Les estimations régionales et mondiales de la dernière version du tableau 2 sont donc considérées comme remplaçant tous les chiffres précédemment publiés en la matière. Les chiffres ayant été arrondis, le total mondial et certains totaux régionaux ne sont pas égaux à la somme des composants.

Les taux d'accroissement en pourcentage ont été calculés par la méthode exposée à propos du tableau 1, sauf qu'ici la période (t) correspond aux années 1950 à 1959 et non 1953 à 1959.

Les estimations des taux moyens de natalité et de mortalité pour la période quinquennale 1955-1959 ont été établies à la faveur d'une étude de l'intervalle de variation des taux calculés à partir de données enregistrées dans chaque pays ou territoire faisant partie de la région étudiée et compte tenu des estimations officielles de la natalité et de la mortalité que l'on a pu tirer des enquêtes par sondage, des résultats de recensements consécutifs et d'autres renseignements du même ordre. Cette méthode implique un classement par rang d'importance des taux de natalité et de mortalité obtenus à partir des données de l'enregistrement ou estimés dans chaque région; on soustrait le taux de croissance observé pour chaque région du plus bas et du plus haut taux de natalité de la série et on l'ajoute au plus bas et au plus haut taux de mortalité de la série, pour obtenir deux nouveaux taux supposés de natalité et de mortalité compatibles avec les composants; on classe enfin par ordre les quatre taux supposés de natalité et de mortalité et, à l'aide de calculs de moyennes, on arrive à un seul taux de natalité et à un seul taux de mortalité qui, combinés, tendent à se rapprocher le plus du taux d'accroissement régional qui a été observé. Les taux par continent sont des moyennes pondérées des taux régionaux. Les divergences importantes constatées entre le taux d'accroissement observé et le taux d'accroissement naturel obtenu selon la méthode décrite ci-dessus ont été imputées au mouvement migratoire; ces cas sont signalés dans les tableaux.

Pour obtenir les superficies régionales, continentales et mondiales, on a fait la somme des superficies des pays et territoires du tableau 1; les chiffres obtenus comprennent donc les eaux intérieures, mais non les zones polaires et quelques îles inhabitées. Pour interpréter les valeurs de la densité de population, il ne faut pas oublier qu'il existe dans la plupart des régions de vastes zones terrestres à peine habitables et que les chiffres publiés ici ne tiennent compte ni des zones inhabitables ni de la dispersion ou de la concentration de la population à l'intérieur des régions considérées.

Portée : Les 14 régions que l'on a distinguées aux fins des statistiques démographiques sont des subdivisions de continents, formées des pays et territoires énumérés au tableau 1. La composition de chaque région est la suivante: elles ont été définies d'après les frontières de fait actuelles et les chiffres donnés pour des années antérieures à 1958 ont été ajustés pour tenir compte des modifications de frontières; ils se rapportent donc à des superficies constantes.

UNION DES RÉPUBLIQUES SOCIALISTES SOVIÉTIQUES

Insuffisances des données : Les estimations de population et les chiffres de superficie du tableau 2 reposent essentiellement sur les données du tableau 1; elles appellent donc toutes les réserves fondamentales formulées à propos de ce tableau.

Les taux d'accroissement et les indices de la densité de population qui en découlent se ressentent eux aussi des insuffisances inhérentes aux données de base. Toutefois, il est à noter que lorsqu'on additionne des données par territoire pour arriver à des totaux régionaux et continentaux, les erreurs qu'elles comportent arrivent parfois à s'équilibrer de sorte que les agrégats obtenus sont un peu plus exacts que chacun des éléments dont on est parti.

Vu leur caractère purement estimatif, la plupart des taux de natalité et de mortalité du tableau 2 doivent être considérés uniquement comme des indices commodes pour les usages courants, mais ne sont pas censés mesurer exactement le niveau de la natalité ou de la mortalité. Même dans les cas où ces taux sont calculés à partir de données enregistrées, ils restent sujets à toutes les réserves applicables à ces données (voir page 71).

Bien qu'ils aient été calculés par la même méthode d'estimation que les taux moyens pour 1951-1955, 1952-1956, 1953-1957 et 1954-1958 publiés dans les quatre dernières éditions de l'*Annuaire démographique*, les taux pour 1955-1959 ne doivent être considérés ni comme comparables aux précédents ni comme constituant avec eux une série chronologique. On s'est fondé chaque fois sur les données disponibles au moment de l'estimation et beaucoup d'éléments nouveaux sont intervenus dans le calcul des estimations relatives à 1955-1959.

Tableau 3

L'objet de ce tableau, publié pour la première fois dans l'*Annuaire démographique* de 1958, est de présenter ensemble les taux actuels de natalité, de mortalité, de nuptialité, de divortialité, de mortalité infantile, de fécondité, et d'accroissement naturel, ainsi que les valeurs de l'espérance de vie pour tous les pays et territoires dont les taux de la natalité et de la mortalité sont considérés comme étant de bonne qualité.

Autant que possible, on a retenu les taux relatifs à la dernière année pour laquelle on disposait de données d'enregistrement et, lorsqu'on connaissait le degré de complétude de ces données, on l'a indiqué dans des notes. Lorsque les statistiques établies sur la base des registres de l'état civil étaient discutables et que l'on possédait des estimations relativement exactes des taux de natalité et de mortalité du pays, on a reproduit ces taux estimatifs en signalant leur caractère. On verra que cette dernière formule a été employée surtout dans le cas des pays d'Afrique et d'Asie, où les statistiques de l'état civil sont nettement défectueuses, mais pour lesquels il existe des estimations apparemment satisfaisantes établies sur la base de résultats d'enquêtes démographiques. Ainsi, le tableau 3 permet de trouver rapidement des taux du moment qui sont plus ou moins comparables. Il est à noter toutefois que, faute de place, on n'a pas donné de détails sur leurs particularités et qu'il y a lieu de se reporter aux tableaux retraçant une évolution à long terme pour avoir des renseignements plus précis sur leur portée, leurs insuffisances générales et la base d'exploitation des données.

La date de référence indiquée est la même pour les taux de natalité et de mortalité; si elle diffère pour d'autres taux, on a donné en note les précisions nécessaires.

Portée : Les données du tableau 3 se rapportent à 108 pays et territoires, c'est-à-dire à tous ceux pour lesquels les taux de natalité et de mortalité paraissent être de bonne qualité, soit que 90 pour cent des naissances et des décès y sont enregistrés, soit que, l'enregistrement y étant incomplet, on dispose néanmoins de bonnes estimations des taux de natalité et de mortalité.

Le tableau 3 ne contient que des données de portée nationale ou concernant de grands groupes ethniques; les taux relatifs à des grandes villes, à des subdivisions administratives ou à des groupes ethniques secondaires en ont été exclus, son objet étant de fournir des chiffres que l'on puisse considérer comme représentatifs pour l'ensemble de la population des pays et territoires envisagés.

Calcul des taux : Les taux bruts annuels de natalité, de mortalité, de nuptialité et de divortialité, calculés sur la base des registres de l'état civil, représentent le nombre d'événements enregistrés au cours de l'année civile indiquée pour 1 000 habitants présents dans l'unité géographique considérée au milieu de l'année. Pour les taux établis par estimation, la méthode utilisée, lorsqu'elle est connue, est indiquée dans des notes au bas du tableau.

Les taux de mortalité infantile représentent le nombre de décès d'enfants de moins de 1 an pour 1 000 naissances vivantes survenues pendant la même période, aucun ajustement n'étant fait pour établir la correspondance entre le numérateur et le dénominateur.

Les taux de fécondité sont calculés comme le nombre d'enfants nés vivants, pendant l'année civile, de femmes âgées de 10 à 49 ans pour 1 000 femmes du même groupe d'âge.

Le taux d'accroissement naturel est égal à la différence entre le taux brut de natalité et le taux brut de mortalité.

Insuffisances des données : Etant donné que la plupart des taux et toutes les valeurs de l'espérance de vie du tableau 3 figurent également dans d'autres tableaux du présent *Annuaire* ou d'*Annuaires* antérieurs, il y a lieu de se reporter aux séries de base correspondantes ainsi qu'au *Manuel de statistique de l'état civil*[30] pour trouver des renseignements détaillés sur les insuffisances des données et les réserves qu'elles appellent.

Pour apprécier la comparabilité des statistiques présentées ici, on devra tout spécialement tenir compte du degré de complétude indiqué par la notation du code de qualité dans chacun des tableaux et dans les notes qui s'y rapportent ainsi que de la base sur laquelle les taux estimatifs ont été calculés. Le manque d'uniformité en ce qui concerne la base d'exploitation des données (par exemple date de l'événement *ou* date de l'enregistrement) peut également compromettre la comparabilité des données, ce dont il faudra tenir compte pour les comparaisons de pays à pays. Enfin, lorsqu'on voudra comparer divers taux d'un même pays ou ceux de différents pays, il faudra aussi se rappeler que les dates de référence ne sont pas toujours les mêmes.

Tableau 4

Ce tableau donne des estimations de la population totale pour chaque année de la période 1920-1960. Tous les chiffres sont exprimés en milliers, le Bureau de statistique les ayant arrondis au millier le plus proche.

Sauf indication contraire, toutes les estimations se rapportent à la population présente rectifiée du territoire actuel des pays considérés. On trouvera à la page 63 et dans les *Annuaires démographiques* de 1955 et de 1956 des explications détaillées sur cette conception de la population et sur ce qui la distingue de la population de droit. Les principales différences entre la composition des populations dont le chiffre est donné dans le tableau 4 et celle de la population de fait rectifiée telle qu'elle est normalement définie sont indiquées en note. En outre, pour des raisons de clarté et de précision — surtout lorsqu'il s'agit d'années de guerre — on a indiqué dans le tableau 4 le traitement de certains groupes importants tels que les militaires, même si ce traitement correspond à la norme.

Les estimations se rapportent au milieu de l'année civile indiquée (1er juillet). Lorsque l'on ne disposait d'estimations officielles que pour le 31 décembre, on a calculé la moyenne arithmétique de deux estimations successives de fin d'année et l'on a reproduit le chiffre obtenu comme s'il s'agissait d'une estimation au milieu de l'année. Dans quelques cas, on a donné dans le tableau les estimations officielles régulièrement établies pour une date autre que le 1er juillet ou le 31 décembre, avec une note indiquant la date à laquelle elles se rapportent.

Chaque fois que l'on n'a pas pu se procurer d'estimation pour l'année considérée, on a publié des résultats de recensement.

En ce qui concerne les années pour lesquelles on disposait à la fois des résultats d'un recensement et d'une estimation au milieu de l'année, on a retenu le chiffre du recensement lorsque la concordance des deux données paraissait insuffisante.

Tous les résultats de recensements qui figurent dans ce tableau sont reproduits en caractères gras pour que le lecteur puisse facilement les reconnaître.

[30] *Op. cit.*

Par un souci de conformité avec le tableau 1, on a donné une estimation de l'ONU toutes les fois où l'on ne disposait pas de chiffres officiels pour 1959.

Les séries dont l'exactitude est douteuse sont reproduites en italique. On n'a pas tenté d'evaluer la qualité de chacune des estimations qui composent les séries; au contraire, la classification des estimations autres que les estimations courantes en exactes et en douteuses est basée sur l'hypothèse que le code relatif au type d'estimation pour l'année précédente est plus ou moins valable pour les estimations des cinq dernières années; on admet ainsi que le code servant à indiquer la qualité des estimations pour la période 1949-1951, qui figure dans l'*Annuaire démographique* de 1952, s'applique également aux estimations remontant jusqu'en 1945 et que les séries qui ont été classées comme exactes en fonction de ces deux codes doivent également avoir été relativement exactes pour les années intermédiaires et les années précédentes. De ce fait, on a attribué aux estimations antérieures qui figurent dans les séries chronologiques une qualité meilleure que celle qu'elles ont probablement eue et on a exagéré l'exactitude des estimations entre 1920 et 1950. Mais étant donné que les critères employés pour déterminer l'exactitude des données courantes sont assez rigoureux, et qu'il n'y a eu que peu de cas où les estimations pour 1949-1951 aient été jugées mauvaises alors que celles de l'année 1959 et des années voisines étaient satisfaisantes, il est probable qu'il n'y a pas eu beaucoup d'erreurs dans le classement qualitatif. Pour plus amples détails sur cette méthode, voir page 66.

Portée : Le tableau 4, qui donne des renseignements pour 224 pays et territoires, est l'un des plus complets de l'*Annuaire*. Il comprend les pays les plus importants, même si les estimations de population pour la période récente ne portent que sur quelques années. En revanche, les pays et territoires moins importants en sont exclus, sauf si les statistiques les concernant couvrent une période relativement longue.

Le principe du tableau 4 est de donner autant que possible les chiffres de la population totale et non des totaux partiels.

Insuffisances des données : La comparabilité des estimations de population est limitée par les facteurs mentionnés à la page 63, savoir: le manque d'uniformité dans les définitions de la population de droit et de la population de fait, l'inexactitude des résultats de recensement sur lesquels reposent certaines estimations et la multiplicité des méthodes par lesquelles sont établies ces estimations.

D'une manière générale, on revise les estimations établies entre deux recensements dès que l'on a connaissance des résultats du dernier recensement.

Il n'en est toutefois pas toujours ainsi, et il en résulte, dans un certain nombre de cas, une nette solution de continuité entre les estimations non revisées antérieures au recensement et les résultats du recensement. De plus, du fait que de nombreux résultats du programme de recensement de 1960 restent provisoires, les estimations relatives à la période précédente n'ont pas encore été rectifiées.

Pour certaines séries, la nécessité d'une revision s'impose; pour d'autres, les données non revisées ne font apparaître que des solutions de continuité insignifiantes. Les séries qui comportent une irrégularité marquée de ce genre sont signalées par le signe paragraphe (§) dans la colonne de gauche du tableau et par un trait vertical (|) au point de rupture; l'emploi de ces symboles, ainsi que les caractères en italique dont il est question ci-dessus, indiqueront au lecteur qu'il s'agit d'une série dont l'exactitude est douteuse.

Tableau 5

Le tableau 5 reproduit l'évolution de la population classée par âge et par sexe pour la période 1940-1960. Les données comprennent essentiellement les résultats de recensements de population et des estimations intercensitaires et postcensitaires calculées selon la méthode de l'accroissement naturel. On a substitué une moyenne de deux estimations de fin d'année acceptables aux estimations de milieu d'année quand celles-ci n'existaient pas; lorsqu'on disposait d'une seule estimation de fin d'année, on l'a fait figurer dans le tableau. La date de référence du recensement ou de l'estimation figure dans la colonne de gauche du tableau et les résultats des recensements sont de plus distingués par le signe (C), figurant après la date. Les moyennes dont il est question ci-dessus ne sont pas spécialement désignées, sauf lorsque la moyenne obtenue par calcul diffère de l'estimation véritable de mi-année qui figure au tableau 4.

Sauf indication contraire, la répartition par âge des chiffres de recensement et des estimations repose sur l'âge au dernier anniversaire. Elle comporte les 20 groupes suivants: moins de 1 an, 1 à 4 ans, 5 à 9 ans, et, ainsi de suite, de 5 ans en 5 ans jusqu'à 84 ans; 85 ans et plus; âge inconnu. Ce système est conforme au classement recommandé par l'ONU[31].

Sauf indication contraire, les données se rapportent à la population présente rectifiée se trouvant sur le territoire actuel des pays considérés (voir la définition à la page 63). Si la rectification a porté sur un grand nombre de personnes, une note spéciale fournit des éclaircissements, même si l'estimation obtenue correspond à la norme pour le tableau.

Conformément à la pratique suivie dans l'*Annuaire* de 1959, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Le classement des estimations en exactes et en douteuses est basé sur la méthode employée pour les obtenir, décrite à propos des totaux du tableau 4. On n'a pas tenu compte de l'inexactitude dans les réponses concernant l'âge (voir page 65).

Portée : Le tableau 5 présente, pour 208 pays et territoires, une ou plusieurs séries de données sur la population selon l'âge et le sexe, soit au total 1 085 séries distinctes dont 367 ont été fournies par des dénombrements et 718 par des estimations. Toutes les unités géographiques pour lesquelles la population a été classée par âge et par sexe y figurent, quelle que soit la portée ethnique du recensement.

La portée du tableau 5 n'a pas été conditionnée uniquement par la possibilité de réunir des données; en

[31] *Principes et recommandations concernant les recensements nationaux de population, op. cit.*, par. 503.

effet, on a délibérément exclu un certain nombre d'estimations de population selon l'âge et le sexe à cause des méthodes de calcul sur lesquelles elles reposaient. Pour pouvoir figurer dans le tableau 5, une estimation doit avoir été établie par la méthode de l'accroissement naturel, complétée par les statistiques des migrations s'il en existe. Les répartitions par âge et par sexe obtenues en appliquant à l'estimation de la population totale les pourcentages des divers groupes d'âge pour chaque sexe au dernier recensement ne sont pas acceptables. Il en existe pour la Birmanie, la Bolivie, le Brésil, Ceylan, le Chili, la Colombie, le Costa Rica, l'Equateur, la région égyptienne de la République arabe unie, le Honduras, l'Italie, le Mexique, le Panama, le Pérou, Saint-Christophe-Nevis et Anguilla, Singapour, la Thaïlande, le Venezuela.

Insuffisances des données : La comparabilité des statistiques de population selon l'âge et le sexe est limitée en premier lieu par le manque d'uniformité dans la définition de la population totale — voir page 63 — et par les lacunes des dénombrements (voir plus haut). L'influence de ces deux facteurs varie selon les groupes d'âge. Ainsi, le dénombrement des jeunes enfants comporte souvent plus de lacunes que celui des personnes plus âgées; de même, la composition de la population totale dépend essentiellement de l'inclusion ou de l'exclusion de certains groupes de personnes appartenant à un groupe d'âge déterminé, par exemple les militaires. Il conviendra de tenir compte de ces facteurs fondamentaux lorsqu'on utilisera les données du tableau 5.

Outre ces difficultés d'ordre général, la comparabilité pose des problèmes particuliers, notamment lorsqu'il s'agit des données par âge. On sait que les répartitions de population selon l'âge présentent certaines imperfections dues aux lacunes du dénombrement des jeunes enfants et à l'inexactitude des déclarations d'âge. Un exposé critique sur cette question figure à la page 63. Certaines de ces anomalies ont tendance à s'estomper ou à disparaître lorsque l'on classe les données par groupes d'âge quinquennaux, mais les données n'en restent pas moins faussées, même s'il n'est pas toujours facile de voir à quel point il y a distorsion. Le classement des statistiques par âge selon l'indice de Whipple (voir page 65) servira donc là encore à évaluer le degré d'exactitude des séries par âge qui figurent au tableau 5.

Le degré de comparabilité dépend également des méthodes employées dans les divers pays pour classer les données selon l'âge. Dans tous les cas où l'on sait que ce classement n'a pas été établi d'après l'âge au dernier anniversaire, mais d'après l'année de naissance, on l'a indiqué en note; il conviendra donc de tenir compte aussi de ce facteur lorsqu'on utilisera les données du tableau. Pour le résultat de cette méthode, voir page 63.

Chaque fois que le classement par âge s'écarte du classement type du tableau, on l'a indiqué par des crochets, ainsi que dans des notes de bas de page. Bien que les divers groupes d'âge ne soient pas toujours parfaitement comparables sur le plan international[32], on a néanmoins publié toutes les données disponibles en raison de l'intérêt qu'elles présentent pour l'étude des pays et territoires en question, en particulier lorsqu'il s'agit de l'Afrique. En effet, il y a peu de temps que l'on possède des renseignements statistiques sur les populations de ce continent et, vu la rareté de ces séries, on a reproduit dans le tableau 5 les résultats de tous les recensements effectués en Afrique, qu'il s'agisse de recensements par sondage ou d'autres dénombrements effectués selon des méthodes non classiques.

En ce qui concerne le classement par âge, il est à noter que l'absence de tout chiffre sous la rubrique âge inconnu ne signifie pas toujours que toutes les déclarations d'âge étaient précises; elle est plus souvent l'indice qu'avant d'exploiter les données, on a fait, le cas échéant, une répartition arbitraire entre les divers groupes d'âge. Ce mode de répartition n'est pas toujours connu et les tableaux comportent peu de notes qui donnent des indications à ce sujet; toutefois, il ne faut pas oublier que ce procédé peut avoir été employé.

Comme on l'a indiqué à propos du tableau 4, les estimations intercensitaires de la population totale sont d'ordinaire rectifiées, si besoin est, d'après les résultats des recensements de population. Les données concernant la répartition de la population par âge et par sexe ne sont toutefois pas toujours rectifiées de cette manière; celles qui ne l'ont pas été portent la mention provisoire dans ce tableau et ne doivent alors être employées qu'avec précaution pour l'analyse des séries chronologiques, quoique leur utilité pour l'étude de la structure par âge de la population pour l'année visée reste probablement entière.

Tableau 6

L'objet de ce tableau est d'indiquer la date de chaque recensement de population en bonne et due forme exécuté entre 1900 et 1960 dans chaque pays et chaque territoire, ainsi que le nombre des personnes de sexe masculin et de sexe féminin dans chaque cas et le taux annuel moyen d'accroissement de la population pour l'ensemble des deux sexes, calculé pour les périodes intercensitaires. Le nombre absolu des personnes de sexe masculin et de sexe féminin figure dans le tableau même si leur somme ne correspond pas au chiffre de la population totale de la région.

Une série historique des taux d'accroissement intercensitaires a figuré pour la dernière fois dans l'*Annuaire démographique* de 1955, mais elle différait par sa présentation de la série publiée cette année, car elle n'indiquait que la population pour l'ensemble des deux sexes et non pour chaque sexe, et car elle comprenait en outre des chiffres se rapportant à la superficie et non seulement à la population. Dans le tableau 6, on suppose que le territoire désigne le territoire actuel, c'est-à-dire celui qui figure au tableau 1, et qu'il était le même dans le passé, sauf indication contraire. L'objet du tableau 6 est donc de retracer une évolution rétrospectivement, pour le territoire actuel, le mouvement de la population et l'histoire des recensements nationaux, quelle qu'en ait été la portée ethnique.

Sauf indication contraire, les données qui figurent au tableau 6 se rapportent à la population présente rectifiée dénombrée à l'intérieur des frontières actuelles. Ce type de population et sa comparabilité avec les chiffres de la population de droit ont été examinés en détail à la page 63. Lorsqu'il existait aussi une série complète

[32] Il y a dans le tableau 5 au moins 58 groupes d'âge non standards.

de résultats de recensements de la population de droit, on l'a fait figurer également dans le tableau à titre de référence.

Des traits horizontaux ont été employés pour indiquer une solution de continuité dans la comparabilité des séries. Les séries historiques uniformes se reconnaissent à l'absence de ces traits. Un trait suivi d'un espace libre sur toute la largeur du tableau y compris la colonne de gauche indique une deuxième série chronologique; un trait en travers de toutes les colonnes de chiffres n'indique qu'un changement dans la série dû à des différences géographiques ou autres.

Portée : Le tableau 6 contient des données relatives à la population dénombrée pour 222 pays et territoires. Toutes les unités géographiques où l'on a procédé à des recensements de population y figurent, quelle qu'ait été la portée ethnique des recensements.

Calcul des taux : Les taux annuels moyens de variation en pourcentage sont la moyenne géométrique des taux d'accroissement, positif ou négatif, entre deux recensements successifs, calculée au moyen de la formule suivante:

$$P_1 = P_0 (1 + r)^t \times 100$$

où P_0 représente la population au début de la période
P_1 représente la population à la fin de la période
t le nombre d'années écoulées entre le début et la fin de la période
r le taux annuel de variation.

On a calculé le taux de variation entre des recensements ayant porté sur l'ensemble du territoire et seulement pour ceux qui ont été considérés comme comparables entre eux. Sauf indication contraire, on a considéré que cette condition était remplie lorsqu'une certaine continuité se manifestait tout au long des séries pour ce qui est de la nature du recensement (population de droit et population de fait), du degré de surdénombrement ou de sous-dénombrement ou du territoire considéré. On n'a pas calculé de taux pour les séries se rapportant à des recensements qui n'ont pas porté sur la population indigène parce qu'on a pensé que les variations survenant dans ces fractions de la population résultent souvent de facteurs non démographiques.

Insuffisances des données : Les résultats des dénombrements de population qui sont présentés dans ce tableau sont, bien entendu, sujets aux imperfections habituelles, c'est-à-dire surdénombrement ou sous-dénombrement et variations dans la notion de population de droit et de population de fait au cours des années considérées. Lorsqu'on savait que les chiffres publiés étaient notablement supérieurs ou inférieurs à la réalité, cela a été indiqué en note. Les seuls renseignements dont on dispose sur la définition de la population totale se trouvent dans le tableau A à la page 62. Il convient donc de se reporter à ce tableau si l'on tient à connaître la composition de la population des différents pays aux derniers recensements. Pour les recensements antérieurs, aucune information précise n'est disponible, mais on peut supposer qu'ils ont été effectués plus ou moins selon les mêmes principes.

Tableau 7

Le tableau 7 retrace l'évolution de la population des capitales et de chaque ville de 100.000 habitants ou plus, d'après la dernière estimation ou le dernier recensement. On a tenu compte des résultats des recensements nationaux et municipaux effectués entre 1940 et 1961, complétés par des estimations pour 1955-1961. Les estimations sont signalées par un (E) figurant après la date dans la colonne de gauche du tableau.

Etant donné que les villes ne sont pas délimitées de la même manière dans tous les pays, on s'est efforcé de donner dans ce tableau des chiffres correspondant non seulement aux villes proprement dites mais aussi, le cas échéant, aux agglomérations urbaines. L'agglomération urbaine comprend par définition la proche banlieue, c'est-à-dire la zone fortement peuplée qui est extérieure mais contiguë aux limites de la ville. Chaque fois que les chiffres obtenus se rapportaient à une agglomération urbaine, c'est à ces chiffres que l'on a appliqué le critère choisi (100.000 habitants) pour l'inclusion dans le tableau de toutes les villes — quelle qu'en soit la définition — répondant aux définitions de dimensions prévues.

Dans le tableau 7, les villes sont rangées dans l'ordre alphabétique anglais bien que leur nom soit donné dans la langue du pays auquel elles appartiennent ou, le cas échéant, dans une translitération. Si l'on a adopté ce mode de présentation, c'est qu'il est difficile d'établir les équivalents anglais et français des noms officiels de bien des villes. Pour faciliter l'identification des capitales, leur nom a été imprimé en lettres majuscules de petit format.

Portée : Le tableau 7 fournit le chiffre de la population des grandes villes de 194 pays et territoires; pour 123 d'entre eux, on n'a donné que la population de la capitale tandis que pour 71 on a indiqué celle de la capitale et d'une ou plusieurs villes comptant, selon la dernière estimation disponible, 100.000 habitants ou plus. Dans bien des cas, avant la date considérée, la population de ces villes était inférieure à 100.000 habitants. Les villes de 100.000 habitants ou plus semblent actuellement être au nombre de 1.413, mais il ne faudrait pas en déduire que c'est là le nombre mondial des villes de cette dimension, car, comme on peut facilement le constater, les renseignements voulus font défaut pour de nombreux pays où l'on peut supposer qu'il existe des villes de cette importance.

Insuffisance des données : C'est surtout dans le cas des villes qu'on se heurte aux difficultés soulevées par la définition de la population de fait et de la population de droit. La comparabilité des données est également compromise par les différences entre les méthodes utilisées pour l'établissement des estimations et, même lorsque les méthodes sont identiques, par le manque de précision inhérent à certaines d'entre elles. Par exemple, les naissances et décès qui se produisent dans les villes ne correspondent pas tous à la population présente ou résidente. En conséquence, on peut être entraîné à des erreurs considérables si l'on établit pour les villes des estimations fondées sur l'accroissement naturel de la population. Les migrations intérieures constituent un second élément d'estimation que, dans bien des régions, on ne peut pas toujours mesurer avec exactitude. Dans ces conditions,

les données du tableau 7 sont d'une valeur restreinte aux fins des comparaisons internationales.

La comparabilité est limitée davantage encore du fait que les critères sur lesquels repose la définition administrative des villes ne sont pas partout les mêmes. Dans la plupart des pays, les villes sont des localités qui ont des limites définies et sont administrativement considérées comme villes, ce qui se caractérise par l'existence d'une autorité locale. Dans d'autres, au Japon, dans les Ryû-Kyû, en France par exemple, la "ville" au sens du tableau 7 est une division administrative comprenant une agglomération et le territoire avoisinant qui peut être essentiellement rural ou qui peut englober d'autres agglomérations tout à fait distinctes. Lorsque les données se rapportent à ce dernier type de ville, on l'a indiqué dans le tableau mais, malgré ces précisions, la plus grande prudence reste de rigueur dans toutes comparaisons internationales.

Enfin, il convient de noter que les données du tableau 7 proviennent soit de recensements municipaux, comme au Libéria, soit de rencensements nationaux, soit d'estimations régulièrement établies, soit encore d'enquêtes spéciales. Quoi qu'il en soit, les dates de base ne sont pas uniformes et comme les populations urbaines s'accroissent selon des processus différents, il faut tenir compte de tous ces éléments si l'on veut comparer valablement les données se rapportant à des années différentes.

Tableau 8

Ce tableau, qui paraît pour la première fois dans l'*Annuaire démographique,* retrace l'évolution de la population totale des localités de 100.000 habitants ou plus et de celle de 20.000 habitants ou plus, du nombre de ces localités et du pourcentage de la population du pays habitant ces deux groupes de localités.

On a tenu compte des résultats des recensements de population effectués entre 1920 et 1960 complétés par les estimations que l'on a pu se procurer. Les données provenant des estimations — que l'on peut identifier grâce à la lettre (E) qui suit la date figurant dans la colonne de gauche du tableau — ont presque toutes été obtenues en additionnant les données du tableau 7 relatives aux chiffres estimatifs de la population des villes de 100,000 habitants ou plus; mais dans ce cas on manque généralement de renseignements sur la population des villes de 20.000 habitants ou plus.

Le tableau comporte un code précisant le type de localité auquel se rapportent les données publiées pour chacune des dates indiquées; les trois notations qui constituent le code (**a**, **b** et **c**) sont expliquées ci-après:

a — Agglomérations ou groupements de population pour lesquels on ne tient pas compte des limites officielles ou du statut administratif.

b — Localités qui ont des limites définies et sont administrativement considérées comme villes, ce qui se caractérise généralement par l'existence d'une autorité locale dont les attributions sont régies par une charte ou l'acte portant octroi du statut. Ces localités portent divers noms dont les plus fréquents sont: villes, bourgs, districts urbains et municipalités. Parfois il s'agit d'un district comprenant un noyau et des faubourgs qui dépendent du centre administratif; parfois aussi, il s'agit de villes distinctes réunissant tous les caractères urbains et dont le territoire est compris à l'intérieur des limites de l'agglomération. L'ensemble de ces localitiés abrite souvent la population urbaine telle que la définit le pays considéré.

c — Circonscriptions administratives secondaires (ou du dernier degré), aux limites définies et dont l'ensemble correspond à la superficie totale du pays. Ces unités ne sont pas nécessairement dotées d'une administration locale ou constituées en municipalités, encore que tel puisse être le cas pour certaines d'entre elles, généralement les plus importantes. C'est alors qu'il est le plus difficile de déterminer si l'on a affaire à des agglomérations ou à des groupements. Dans la plupart des pays il n'y a généralement pas de doute pour les agglomérations relativement importantes mais il risque d'exister quelque incertitude quant aux groupements de moyenne ou faible dimension du fait qu'ils se superposent à des unités territoriales bien définies.

On notera que les localités auxquelles se rapportent les statistiques du tableau 8 appartiennent essentiellement au type **b** — localités qui ont des limites définies et sont administrativement considérées comme villes. Ce sont les "villes proprement dites" du tableau 7; celles qui sont codées **a** sont les agglomérations urbaines du tableau 7.

Sauf indication contraire, les chiffres de la population totale se rapportent à la population présente rectifiée se trouvant sur le territoire actuel des pays considérés.

Portée : Les statistiques du tableau 8 se rapportent à 149 pays et territoires; pour 76 d'entre eux, les données sont fournies pour chacune des deux catégories de localités et pour 28 pour les villes de 20,000 habitants et plus seulement. En raison de leur nature géographique, les données sont celles des recensements ou estimations nationales portant sur tout le territoire et sur toutes les personnes présentes ou résidant dans ledit territoire.

Le tableau 8 ne comprend pas davantage les villes (par exemple Berlin, Ceuta, Melilla, Gibraltar, Monaco, etc.) lorsque la localité compte 100.000 habitants ou plus et qu'elle coïncide avec le territoire; sont exclus également les pays pour lesquels on ne possède pas l'estimation de la population totale permettant de calculer les pourcentages; cela ne s'applique qu'à l'Ethiopie, les données la concernant figurant d'ailleurs au tableau 7.

On notera qu'un certain nombre de pays et territoires sont affectés de la fréquence zéro. Il devrait y avoir plus de pays dans ce cas, car on n'a pu considérer que ceux qui ont exploité les données relatives à la population totale selon la dimension des localités. Il est évident que ce nombre devrait être plus grand, du moins pour les localités de 100.000 habitants ou plus (voir tableau 7), mais on ne les a pas mentionnées à nouveau dans le tableau 8.

Calcul des pourcentages : Il s'agit de la proportion en pourcentage des habitants des localités de chaque catégorie dimensionnelle par rapport à la population totale des pays ou territoires à la même date. Les pourcentages ont été calculés avec deux décimales et arrondis à une.

Insuffisance des données : Les statistiques censitaires du tableau 8 se ressentent de toutes les imperfections dues aux différences existant dans la définition de la population totale ainsi qu'à l'importance variable du sous-dénombrement (voir plus haut page 63).

Les estimations sont elles aussi affectées par les défauts des estimations démographiques en général (voir page 66).

Ce qui est bien plus grave encore, c'est l'hétérogénéité des définitions données dans les divers pays du terme localités sur lequel repose le tableau 8. Les trois catégories de localités ont été décrites ci-dessus. On peut admettre qu'il existe un certain degré de comparabilité entre les données codées **a**, **b** ou **c** mais on doit faire preuve d'une grande prudence si l'on désire comparer les données relatives à des localités de types différents. Cette recommandation vaut probablement surtout lorsqu'il s'agit de comparer les pourcentages ou tendances concernant les localités du type **b** et celles du type **c** car il est difficile de déterminer le degré d'urbanisation dans les subdivisions administratives du dernier degré. Pour plus de détails sur ce point, on aura intérêt à se reporter aux tableaux 7 et 9. Tant que le type de localité demeure inchangé d'une année à l'autre, l'évolution chronologique de la proportion de la population habitant les localités de 20.000 habitants ou plus et celles de 100.000 ou plus donne une bonne idée du degré d'urbanisation de la région. Elle aide aussi à analyser les tendances mondiales et régionales, car elle échappe relativement aux complications qui résultent des définitions nationales du "statut urbain". Les données sont peut-être le plus utile quand on les examine en fonction des chiffres des tableaux 7 et 9.

Tableau 9

Dans ce tableau figure l'évolution chronologique du nombre et du pourcentage de la population dénombrée ou estimée comme population urbaine, selon le sexe, pour la période 1920-1960. Une série chronologique limitée se rapportant à la période 1900-1950 a figuré dans l'*Annuaire démographique* de 1952, et une autre série relative aux recensements qui ont eu lieu entre 1945 et 1954 dans celui de 1955. En même temps qu'une mise à jour de ces deux tableaux, le tableau 9 représente un élargissement considérable de la période étudiée.

Les données qui figurent dans ce tableau sont en général relatives à des recensements de population qui ont porté sur l'ensemble du territoire national et sur tous les secteurs de la population. Il s'y trouve également quelques estimations obtenues par des méthodes autres que la répartition proportionnelle d'après les résultats de recensements. On peut reconnaître les estimations au signe (E) qui suit la date figurant dans la colonne de gauche.

Dans les tableaux correspondants des Annuaires de 1952 et de 1955, on a publié à côté des données relatives à chaque pays ou territoire la définition de la population urbaine employée dans chaque cas. Dans la présente édition, les définitions sont toutes énumérées à la fin du tableau. Les différences observées entre les nouvelles définitions et les anciennes sont dues à des revisions basées sur des données plus récentes ou plus exactes.

Sauf indication contraire, les données se rapportent à la population présente rectifiée pour le territoire actuel du pays.

Portée : Au total, 135 pays et territoires figurent dans le tableau; pour 107 d'entre eux, les données se rapportent à l'ensemble des deux sexes ainsi qu'à la population de sexe masculin et de sexe féminin séparément. Cette portée ne peut cependant être considérée comme complète. Dans le cas de plusieurs pays et territoires, notamment en Afrique, un seul centre de population — la capitale — peut être raisonnablement qualifié d' "urbain". Ces régions ne sont pas comprises dans le tableau 9, mais on pourra s'en faire une idée en consultant le tableau 7.

Calcul des pourcentages : On entend par pourcentage le nombre des personnes classées sous la rubrique "population urbaine", pour 100 personnes dénombrées ou estimées dans la population totale correspondante à la même date; les pourcentages sont calculés pour les personnes de sexe masculin et de sexe féminin séparément, et pour l'ensemble des deux sexes. Les pourcentages ont été calculés à deux décimales près et arrondis à une seule décimale pour la présentation.

Insuffisance des données : Les limitations fondamentales imposées par les variations de la définition de la population totale et par les lacunes du recensement se font peut-être plus sentir dans la répartition de la population en urbaine et rurale que dans sa répartition suivant toute autre caractéristique. C'est ainsi que la classification en population urbaine ou population rurale sera affectée par des différences dans la définition de la résidence habituelle d'autant plus que la population urbaine est généralement exprimée en fonction de divisions telles que les communes ou les villes. Pareillement, le degré de sous-dénombrement aura une influence notable sur la comparabilité de ces deux catégories dans l'ensemble du tableau. Ce qui crée une difficulté encore plus caractérisée, c'est que les pays ne sont pas d'accord sur la définition du terme urbain.

La distinction entre les régions urbaines et les régions rurales varie tellement que les définitions utilisées ont été publiées à la fin du tableau. Les définitions sont forcément brèves et lorsque le classement en "zone urbaine" repose sur des divisions administratives on en a souvent donné le nom dans la terminologie en usage dans le pays considéré. Par suite des variations dans la terminologie, les différences entre pays peuvent paraître plus grandes qu'elles ne le sont réellement. Mais il se peut aussi que des termes similaires ou identiques, tels que ville, village, district, aient des significations absolument différentes suivant les pays[33]. Cependant on constatera souvent que l'unité de classement est la même que le type de localité selon la dimension (tableau 8).

Les définitions adoptées par les différents pays peuvent être ramenées à trois types principaux : classification de la population urbaine reposant sur les plus petites circonscriptions administratives déterminées d'après un certain critère qui peut être une forme quelconque d'administration locale, le nombre d'habitants ou la proportion de la population occupée dans l'agriculture; classification reposant sur les chefs-lieux des plus petites circonscriptions administratives, considérés comme urbains d'après le chiffre de leur population, le reste

[33] Pour plus de détails sur les problèmes et pratiques ayant trait à la classification de la population en urbaine et rurale, voir *Etude sur les données relatives à la population urbaine et la population rurale dans les recensements récents*, Organisation des Nations Unies. Département des questions sociales, Division de la population, et Département des questions économiques, Bureau de statistique. Document ST/SOA/SER.A/8, Lake Success, juillet 1950, 27 pages.

constituant la population rurale; classification reposant directement sur l'importance des localités qui sont considérées comme urbaines à partir d'un certain chiffre de population.

Il arrive ainsi que soient considérées comme urbaines des localités de 250 habitants à peine au Danemark alors qu'en Corée les agglomérations ne sont reconnues comme telles que lorsque leur population atteint 40.000 personnes au moins. En Irlande du Nord et en Bulgarie, les localités urbaines sont celles qui jouissent officiellement du statut urbain, quelle que soit l'importance de leur population; en Israël, les centres urbains sont ceux de caractère essentiellement non agricole; à Malte le terme urbain s'applique aux régions dépourvues de terres cultivées. Cet aperçu de quelques variations donne une idée du défaut de comparabilité existant entre les définitions de chaque pays.

La distinction entre régions urbaines et rurales est si étroitement liée à des considérations d'ordre historique, politique, culturel et administratif que l'on ne peut progresser que très lentement vers des définitions et des méthodes uniformes. Non seulement les définitions publiées dans le tableau 9 sont différentes les unes des autres, mais encore on n'y retrouve même plus l'intention originale de distinguer les régions rurales des régions urbaines. Lorsque la classification est fondée, en particulier, sur le critère des circonscriptions administratives (comme la plupart le sont) elle a tendance à devenir rigide avec le temps et à décourager toute modification. Pour cette raison la comparaison des données dans le temps peut être dépourvue de signification puisque les définitions ne s'appliquent plus dans la plupart des cas aux circonstances actuelles.

En dépit de ces insuffisances, les statistiques de la population urbaine sont extrêmement utiles lorsqu'on se propose de comparer le degré d'urbanisation entre pays ou territoires. Quelle que soit la manière dont elles sont définies, les régions urbaines ont de grandes chances de comprendre une forte concentration de population urbaine tandis que les régions rurales sont en majeure partie composées de villages ou de zones aux caractéristiques rurales évidentes. On peut donc dire que si les contrastes entre la population rurale et la population urbaine ne sont pas mesurés de façon précise, ils se reflètent néanmoins dans les statistiques.

Si l'on considère une série chronologique relative à une région donnée, il faut tenir compte du fait que des variations du pourcentage de la population urbaine ont pu être causées, du moins en partie, par des changements de définition, en particulier entre un recensement de population et une enquête qui donne un chiffre estimatif. Avant de tirer des conclusions, il est bon de se reporter aux définitions officielles en usage dans chaque pays, qui figurent à la fin du tableau.

Tableau 10

Dans le tableau 10 figure l'évolution chronologique de la population célibataire et mariée, classée par âge et par sexe, pour la période 1920-1940. On y trouve l'effectif des populations dénombrées au cours des recensements de cette période ainsi que des estimations intercensitaires, et le rapport en pourcentage entre le nombre de mariés et de célibataires d'âge et de sexe donnés et l'effectif du groupe d'âge et de sexe correspondants. Le pourcentage des célibataires par âge et par sexe a figuré précédemment dans l'*Annuaire démographique* de 1949-50, et un pourcentage analogue pour les mariés dans celui de 1954.

Dans le tableau 10, l'âge est défini comme âge au dernier anniversaire ou années révolues. La population âgée de 15 ans et plus est classée en 4 catégories : 15-24, 25-34, 35-44 ans et 45 et plus. Les personnes d'âge inconnu sont exclues de ces catégories, mais sont supposées comprises dans le total 15 et plus. Lorsque la répartition par âge n'était pas disponible, les données pour "tous âges" figurent à la fin du tableau.

Les célibataires sont par définition les personnes classées lors d'un dénombrement ou d'une estimation comme n'ayant jamais été mariées; y compris les personnes dont le mariage a été annulé. Les mariés sont les personnes en état d'union de droit ou d'union coutumière ou consensuelle et celles étant de droit ou de fait séparées de leur conjoint mais non divorcées. On n'a pas cherché à déterminer la situation réelle des personnes classées "situation matrimoniale inconnue". Ces définitions correspondent aux *Principes et recommandations concernant les recensements nationaux de population*[34] et les données du tableau sont supposées conformes, sauf indication contraire.

Les résultats des recensements sont donnés soit pour l'ensemble, soit pour une partie du pays, selon la portée des dénombrements. Il est établi ou il est admis par hypothèse que les estimations qui figurent dans ce tableau ont été calculées sur la base de données de recensements, et en tenant compte de l'accroissement naturel et des mouvements migratoires pour rapporter à une date actuelle le chiffre de la population de base. Les estimations se reconnaissent au signe (E) figurant à la suite de la date donnée dans la colonne de gauche du tableau.

Sauf indication contraire, les données se rapportent à la population présente rectifiée pour un territoire géographique correspondant aux limites territoriales décrites à la page 63.

Portée : Le tableau 10 contient des données se rapportant à 130 pays et territoires et comprend en tout des répartitions pour 390 années distinctes. Tous le résultats des recensements nationaux et partiels figurent dans ce tableau.

Calculs des pourcentages : Le pourcentage des célibataires et des mariés est le nombre de personnes qui, dans chaque groupe d'âge et de sexe, sont classées comme célibataires ou mariées (conformément aux définitions ci-dessus), par rapport à 100 personnes du même groupe à la date déterminée. Les pourcentages ont été calculés à deux décimales près et arrondis à une seule décimale pour la présentation. On peut considérer cette portée comme relativement vaste pour une tabulation de la population selon la situation matrimoniale, l'âge et le sexe. En outre un certain nombre de pays et territoires classent la population selon l'état matrimonial sans distinction d'âge au-dessus d'un âge minimum; ces données ne figurent pas au tableau 10, mais on les trouvera aux pages 202 et 203 de l'*Annuaire* de 1958.

Insuffisances des données : Comme pour toutes les données fournies par les recensements, la comparabilité des répar-

[34] *Principes et recommandations concernant les recensements nationaux de population, op. cit.*, par. 410.

titions selon la situation matrimoniale dépend des notions de base utilisées pour définir la population recensée : population présente, ou de fait, et population légale ou de droit. Il faut tenir compte aussi du sous-dénombrement et du surdénombrement. Voir à ce sujet p. 63.

Les réserves qu'appelle l'introduction de l'élément "âge" ne doivent pas non plus être négligées. A ce sujet, voir le tableau 5 ci-dessus.

La comparabilité des répartitions selon la situation matrimoniale est également sujette à des limitations qui ont leur source dans le dénombrement même. On sait, par exemple, que lors du dénombrement, une personne divorcée peut se déclarer soit célibataire, soit mariée, soit veuve. Cette possibilité est confirmée par le fait que le nombre de divorcés obtenus à la suite d'un recensement est généralement très faible par rapport au nombre des divorces accordés et à la fréquence des remariages. De même, les hommes mariés qui sont séparés de leur épouse peuvent se déclarer célibataires, tandis que leur épouse se déclarera, à juste titre, mariée. Une erreur de déclaration d'un autre type est introduite dans les statistiques lorsqu'une femme célibataire qui a un enfant illégitime se déclare mariée, alors que le père de l'enfant se sera correctement déclaré célibataire.

En ce qui concerne la classification, les mêmes types de variation peuvent exister, l'uniformité apparente des principales catégories cachant parfois d'importantes différences.

L'élément qui est peut-être le plus important de tous en ce qui concerne la comparabilité des données est le classement des unions consensuelles ou unions de fait, surtout dans les pays où elles sont relativement nombreuses. Abstraction faite des erreurs de déclaration, dont on ne peut de toute façon évaluer l'importance, le seul moyen de rendre les données comparables est de classer les unions consensuelles séparément — de manière qu'elles puissent être identifiées — ou de les inclure dans une autre catégorie. Il semble que les personnes vivant en union consensuelle ont tendance à se déclarer mariées plutôt que célibataires. Par suite, et comme du point de vue démographique elles sont, en fait, mariées, l'Organisation des Nations Unies[35] a recommandé que, lorsqu'elles ne font pas l'objet d'un classement spécial, ces personnes soient rangées dans la catégorie des mariés.

L'examen du tableau 26 révèle que 26 pays et territoires ont une rubrique spéciale pour les personnes vivant en union consenuelle et que 9 les classent dans la catégorie des célibataires. Pour le reste (95 pays), il faut supposer que ces personnes sont rangées dans la catégorie des mariés.

De même, la subdivision "séparés" est de composition incertaine; elle peut comprendre des personnes dont le mariage a été suspendu par une procédure légale; elle peut comprendre également des personnes mariées qui vivent simplement séparées de leur conjoint sans avoir nécessairement l'intention de le rester. Cependant, comme les lois et coutumes relatives à la séparation légale diffèrent d'un pays à l'autre ainsi qu'à l'intérieur d'un même pays, une véritable comparabilité pour ce groupe est probablement hors de question. Pour cette raison, les personnes séparées sont généralement rangées dans la catégorie des mariés, mais on verra dans le tableau qu'elles sont classées séparément dans 24 pays et assimilées aux divorcés dans 15 autres.

Le classement des personnes dont la situation matrimoniale est inconnue peut également compromettre la comparabilité internationale des statistiques. Dans certains pays, on n'inscrit jamais sur le bulletin de recensement "situation matrimoniale inconnue" et l'on attribue par recoupement une situation matrimoniale déterminée au recensé. Ainsi, lorsqu'on ne trouve le chiffre 0 sous la rubrique "Situation matrimoniale inconnue", il peut se faire qu'en réalité les personnes en question aient été réparties entre les autres catégories.

Tableau 11

Le tableau 11 indique l'évolution chronologique de la population illettrée âgée de 15 ans et plus, classée selon le sexe pour la période 1920-1960 et le pourcentage de ces illettrés par rapport à la population totale pour chaque année. Un tableau analogue, où figuraient des données se rapportant à un seul recensement, a paru dans l'*Annuaire démographique* de 1948; les chiffres correspondants pour tous les recensements effectués entre 1945 et 1954 figurent dans l'*Annuaire démographique* de 1955, mais les pourcentages n'ont été calculés que pour l'ensemble des deux sexes. Le tableau 11 représente une synthèse de ces données avec d'autres renseignements qu'on a pu se procurer et qui remontent jusqu'à 1920, et couvre l'ensemble des personnes âgées de 15 ans et plus, tout en donnant des pourcentages séparés pour les hommes et pour les femmes.

Les données qui figurent dans le tableau 11 sont des résultats de recensements et des estimations essentiellement fondées sur des enquêtes par sondage et provenant soit de sources originales dont on a pu avoir connaissance, soit de *l'Analphabétisme dans divers pays*[36] et *l'Analphabétisme dans le monde au milieu du XXème siècle*[37]. Les estimations se reconnaissent au signe (E) figurant à la suite de la date donnée dans la colonne de gauche du tableau; on a signalé en notes, au bas de la page, les données fournies par l'UNESCO. Aux fins de ce tableau, l'analphabétisme est défini inaptitude à lire ou à écrire; les personnes semi-illettrées, c'est-à-dire sachant lire mais non écrire, sont classées avec les illettrés. Les personnes dont l'aptitude à lire ou à écrire est inconnue (lorsqu'elles figurent séparément dans le tableau) ont été considérées comme sachant lire et écrire pour des raisons exposées ci-dessous au paragraphe "calcul des pourcentages".

Etant donné que la répartition de la population selon l'aptitude à lire et à écrire part d'un âge compris entre 0 et 15 ans selon les pays, on a choisi ici le dénominateur commun de 15 ans, afin d'obtenir un degré de comparabilité maximum. Ce choix est conforme aux recommandations de l'UNESCO pour l'établissement des taux d'analphabétisme pour les adultes.

Sauf indication contraire, les données se rapportent à la population présente rectifiée pour le territoire actuel.

[35] *Ibid.*, par. 410.

[36] *L'Analphabétisme dans divers pays.* Organisation des Nations Unies pour l'éducation, la science et la culture, Monographies sur l'éducation de base, VI, 1953, 224 pages non compris les graphiques.

[37] *L'Analphabétisme dans le monde au milieu due XXème siècle.* Organisation des Nations Unies pour l'éducation, la science et la culture, Monographies sur l'éducation de base, XI, 1957, 200 pages.

Portée : Le tableau 11 comprend des données se rapportant à 130 pays et territoires. La portée géographique a été choisie aussi étendue que possible en ce qui concerne les données se rapportant à la population totale d'un pays ou aux groupes les plus importants à l'intérieur du territoire national, mais les données concernant uniquement les populations non indigènes ont d'ordinaire été omises puisque ces populations comptent fort peu d'illettrés et ne sont pas représentatives de la région étudiée.

Il faut remarquer qu'on manque totalement de données pour un certain nombre de pays économiquement développés, et que pour de nombreux autres pays on n'a pas pu se procurer les statistiques récentes. En effet, les recensements de population ne comportent aucune question sur l'aptitude à lire et à écrire à moins que ce problème ne se pose avec une acuité particulière et, du fait que l'analphabétisme a presque entièrement disparu dans la plupart de ces pays, la question a été jugée superflue. C'est pourquoi on ne dispose de ces séries ni pour le Royaume-Uni, ni pour la Nouvelle-Zélande, et que pour le Canada elles s'arrêtent en 1931, pour la Suède en 1930, pour la Finlande en 1931 et pour l'Australie en 1921.

L'absence de statistiques pour les pays et territoires sous-développés tient essentiellement au fait que beaucoup d'entre eux n'ont pas encore procédé à des recensements de population complets. Pour l'ordre de grandeur probable des taux d'analphabétisme dans ces régions, voir *l'Analphabétisme dans le monde au milieu du XXème siècle*[38].

Calcul des pourcentages : Le pourcentage d'illettrés, calculé séparément, pour les deux sexes, est le nombre de personnes âgées de 15 ans et plus enregistrées comme illettrées ou semi-illettrées pour 100 personnes âgées de 15 ans et plus appartenant, à la même date, au groupe d'âge-sexe considéré. Quand les données sur l'analphabétisme ont été calculées sur la base d'un âge minimum autre que 15 ans, ou sans tenir compte d'un âge minimum quelconque, les pourcentages ont été calculés sur le groupe d'âge correspondant de la population.

Comme il est dit ci-dessus, les personnes dont le degré d'aptitude à lire et à écrire est inconnu n'ont pas été comptées avec les illettrés, puisque, si le nombre de personnes dont le degré d'aptitude à lire et à écrire est inconnu et peu important, les conséquences de leur exclusion du total des illettrés sont négligeables; d'autre part, si ces personnes sont nombreuses, le fait de les classer parmi les illettrés augmenterait indûment le taux d'analphabétisme. Si l'on soustrayait le nombre des personnes dont le degré d'aptitude à lire et à écrire est inconnu du chiffre de la population totale, cela reviendrait également à exagérer la proportion des illettrés. On peut donc considérer les pourcentages calculés comme représentant des valeurs minima.

On a admis par hypothèse que les personnes d'âge inconnu avaient dépassé la limite d'âge minimum, c'est-à-dire qu'elles avaient 15 ans ou plus.

Insuffisances des données : Les principales insuffisances en ce qui concerne les données relatives à l'analphabétisme proviennent de variations dans la définition de l'analphabétisme et dans les âges minimums adoptés. Ces différences peuvent se révéler particulièrement importantes dans les comparaisons entre les résultats des recensements et ceux des enquêtes par sondage.

Dans le tableau, les illettrés sont par définition les personnes qui ont été déclarées comme ne sachant pas lire ou ne sachant pas écrire. Cette catégorie comprend donc le personnes semi-illettrées, c'est-à-dire celles qui peuvent lire mais non écrire, et celles qui peuvent écrire mais non lire. Cette dernière définition est particulièrement importante dans les cas où l'aptitude à écrire est déterminée par l'aptitude d'une personne à signer son propre nom. Bien qu'on doive admettre que les pays observent cette définition dans des cas très nombreux (les informations nécessaires n'étant pas disponibles), on sait pertinemment qu'elle n'est pas suivie dans certains pays. C'est ainsi que dans le Bornéo du Nord, à l'île Maurice et à Macao, par exemple, les semi-illettrés sont comptés avec les personnes sachant lire et écrire. Cette diversité de définitions est beaucoup plus profonde qu'elle ne paraît dans le tableau et il convient d'en tenir compte en interprétant les données[39].

Un autre obstacle à la comparabilité des données dans le temps et entre différents pays tient à la langue que l'intéressé est censé lire ou écrire. Pour certains pays, comme le Portugal, l'aptitude à lire et à écrire est déterminée, dans leurs provinces d'outre-mer d'Angola, du Mozambique, etc., par l'aptitude à lire et à écrire le portugais. Il en résulte un très haut pourcentage d'analphabétisme, bien que les personnes classées comme illettrées puissent en fait savoir lire ou écrire leur propre dialecte. Pareilles divergences font obstacle à la comparabilité des données concernant l'île Maurice, où l'aptitude à lire et à écrire a été déterminée en fonction du chinois et de l'anglais lors d'un recensement et en fonction de l'anglais seulement lors d'un autre. On a indiqué en note toutes les variations de ce genre dont on a pu s'assurer.

L'appréciation du recenseur dans les cas douteux et le classement des personnes dont l'aptitude à lire et à écrire est inconnue constituent également des sources de variation dans les statistiques. Dans certains pays, une preuve de fréquentation scolaire suffit pour faire classer l'intéressé parmi les personnes sachant lire et écrire. Dans d'autres, en l'absence de renseignements sur l'aptitude à lire et à écrire, le recensé a été classé tantôt comme sachant lire et écrire, tantôt comme illettré. Ces variations, qui n'apparaissent pas nettement dans le tableau, doivent être prises en considération, particulièrement lorsqu'il s'agit de régions où il y a probablement un fort pourcentage de personnes entrant dans la rubrique "aptitude . . . inconnue".

Chaque fois que l'âge minimum varie, il est évident que le pourcentage des "illettrés" par rapport à la population totale n'est pas comparable d'un pays à l'autre puisque le numérateur ne se rapporte pas à la même tranche de population. Pour améliorer la comparabilité, on a fixé l'âge minimum à 15 ans dans ce tableau et on ne s'est préoccupé que de l'analphabétisme des personnes ayant 15 ans et plus. Les pays où l'âge minimum est inférieur à 15 ans peuvent d'ordinaire

[38] *Op. cit.*, tableaux 7 à 10 compris.

[39] Pour plus de détails, voir l'*Education dans le monde : organisation et statistiques;* Organisation des Nations Unies pour l'éducation, la science et la culture, Laos, France, 1955, 943 p. Cf. aussi *l'Analphabétisme dans divers pays, op. cit.*

fournir des données pour le groupe 15 ans et plus ou en tout cas pour le groupe des illettrés. Mais, pour les pays où il n'existe pas d'âge minimum, les chiffres ne sont pas comparables. Il faut tenir compte de cette cause de non-comparabilité quand on utilise les données en question pour la population totale.

En plus des problèmes particuliers dont il a été question, il convient de se rappeler que les séries sur l'analphabétisme — tout comme les autres statistiques de recensements — sont sujettes aux limitations habituelles inhérentes à la portée et à la complétude des dénombrements.

Tableau 12

Le tableau 12 retrace l'évolution, entre 1920 et 1960, de la répartition de la population active selon le sexe, et du pourcentage de cette population par rapport à la population (masculine et féminine) de tous âges. Il présente des résultats de recensements effectués pendant la période en question, complétés, pour les années intercensitaires, au moyen des chiffres fournis par des enquêtes par sondage; ces derniers proviennent généralement de publications du BIT et sont signalés au moyen de la lettre (E) après la date dans la colonne de gauche du tableau. On a indiqué en notes au bas de la page les données publiées primitivement par le BIT. Un tableau analogue contenant des données pour une seule année a paru dans l'*Annuaire démographique* de 1949-50 et les statistiques fournies par les recensements effectués entre 1945 et 1954 d'une part, et 1945 et 1955 d'autre part, ont été reproduites dans l'*Annuaire* de 1955 et dans celui de 1956 respectivement.

La population active s'entend de la partie de la population qui fournit le travail nécessaire à la production des biens et services. Elle se compose donc de toutes les personnes des deux sexes faisant ou cherchant activement à faire un travail productif dans une branche d'activité économique au cours d'une période déterminée. La population active que l'on appelle également main-d'œuvre comprend théoriquement les groupes suivants de travailleurs[40]:

1) Employeurs civils, salariés, travailleurs à leur propre compte et travailleurs familiaux non rémunérés.
2) Membres des forces armées.
3) Personnes occupées et chômeurs, y compris les personnes cherchant un emploi pour la première fois.
4) Personnes travaillant à temps partiel.
5) Domestiques.

La population *inactive* comprend les personnes n'exerçant aucune activité économique au moment du recensement. Normalement, elle englobe les ménagères, les étudiants n'exerçant pas d'activité économique, les retraités titulaires ou non de revenus et les personnes vivant dans des institutions, les enfants n'ayant pas l'âge de travailler, les personnes l'ayant dépassé, etc. Les exceptions à ces définitions ont été indiquées en note chaque fois que cela était possible.

Les personnes qui n'ont pas déclaré leur activité n'ont pas été classées dans la population active qui *comprend en revanche* celles dont l'activité est mal définie.

Sauf indication contraire, les données concernent la population présente rectifiée se trouvant à l'intérieur des frontières actuelles. L'âge minimum des personnes auxquelles se rapportent les statistiques de la population active est indiqué dans le tableau.

Portée : Le tableau 12 contient 526 séries distinctes concernant 172 pays et territoires. Les chiffres fournis par les recensements nationaux aussi bien que par les dénombrements de sous-groupes ethniques ont été reproduits afin de donner au tableau une portée géographique maximum. Les estimations établies sur la base de la répartition de la population active au moment du recensement n'ont pas été reproduites, contrairement à celles qui ont été calculées à partir des résultats d'enquêtes par sondage.

Calcul des pourcentages : Les pourcentages expriment le nombre de personnes (M, F ou les 2 sexes) classées comme actives — selon la définition utilisée dans le pays considéré — pour 100 personnes appartenant au groupe (M, F ou les 2 sexes) correspondant. Comme il n'est pas tenu compte de l'âge minimum, le numérateur correspond parfois à la partie de la population ayant dépassé un âge donné tandis que le dénominateur comprend les personnes de tous âges. Cette méthode a été choisie parce que les séries correspondantes n'exigent pas que l'on connaisse la répartition de la population selon le sexe et l'âge et qu'on peut donc les calculer pour un plus grand nombre de pays que si on avait pris en considération les limites d'âge. Ces pourcentages que l'on appelle "taux bruts de participation de la main-d'œuvre" ou "taux bruts d'activité" expriment également le rapport des "producteurs" aux "personnes à charge" dans la population totale.

Insuffisance des données : Comme les autres données provenant de recensements, les statistiques de la population active présentent des défauts graves qui sont imputables aux définitions utilisées ainsi qu'aux méthodes de calcul. On trouvera une analyse détaillée de cette question dans le *Manuel des méthodes de recensement de la population* (Volume II, Caractéristiques économiques de la population)[41]; on a brièvement exposé le problème ci-après.

Il convient de souligner tout particulièrement qu'en raison des différences de définitions, les recensements de population tendent à donner des résultats au sujet de la population active des chiffres qui ne sont pas comparables à ceux qui proviennent des enquêtes par sondage sur la main-d'œuvre. De ce fait, il faudra faire preuve de la plus grande prudence lorsque l'on voudra formuler des conclusions sur une comparaison de résultats de recensements et d'enquêtes par sondage. Il faudra également s'assurer avec une attention spéciale de la comparabilité des résultats de recensements de population successifs dans le même pays, en particulier pour ce qui est des définitions et des concepts.

[40] Il est à noter que ces catégories ne s'excluent pas mutuellement : elles constituent des exemples dont l'agencement devra être pris en considération lorsque l'on voudra déterminer la comparabilité des données.

[41] *Manuel des méthodes de recensement de la population*, Volume II, Caractéristiques économiques de la population. Etudes méthodologiques, *op. cit.*

Le classement des travailleurs familiaux non rémunérés, c'est-à-dire des personnes qui participent sans contrepartie pécuniaire à l'activité économique d'une entreprise gérée par d'autres membres du ménage, est sans doute le facteur qui exerce la plus grande influence sur la comparabilité des statistiques de la population active. Ce groupe constitue un élément de la population active bien qu'en réalité il joue un rôle relativement peu important sur le marché du travail, sauf dans les économies essentiellement agricoles. Dans certains pays, les femmes, les vieillards et les adolescents qui vivent dans une exploitation agricole sont classés par exemple comme "travailleurs familiaux non rémunérés exerçant une activité économique" tandis que dans d'autres ils sont classés dans les catégories suivantes : ménagères, retraités et étudiants, et de ce fait compris dans la population *inactive*. Ce manque d'uniformité nuit considérablement à la comparabilité des données, tant pour les mêmes pays à des époques différentes qu'entre des pays différents.

Dans certains pays, les personnes qui ont une situation mixte, c'est-à-dire qui travaillent à temps partiel, sont classées dans la population active tandis que dans d'autres elles font partie de la population inactive. Enfin, dans d'autres pays encore, leur classement dépend du temps qu'elles consacrent à des activités rémunérées. Cette diversité de classement limite également la comparabilité des données obtenues.

Le manque d'uniformité dans le classement des membres des forces armées et des personnes vivant dans des institutions ou des réserves nuit aussi à la comparabilité. Si les méthodes suivies pour classer ces deux groupes, ainsi que le groupe des retraités, sont à l'origine de différences appréciables dans les statistiques, c'est surtout parce que le dénombrement de la population active est fondé sur la notion d' "activité habituelle" (travailleurs rémunérés) et non sur celle de "main-d'œuvre".

Enfin, dans les divers pays, on ne classe pas d'une manière uniforme les personnes sans travail et, en particulier, celles qui cherchent un emploi pour la première fois. Dans leur forme la plus élémentaire, les méthodes fondées sur la notion de travailleurs rémunérés ne donnent pas toujours d'indications précises pour le classement des chômeurs. C'est ainsi que, dans certains pays, les chômeurs sont classés dans la population active conformément aux recommandations formulées à cet effet, tandis que dans d'autres ils en sont exclus. Parfois, les personnes temporairement sans travail sont considérées comme faisant partie de la population active mais non celles qui cherchent un emploi pour la première fois.

La diversité des groupes d'âge pour lesquels on réunit des renseignements sur les caractéristiques économiques de la population constitue également une autre source importante de variation. Dans de nombreux pays, la question sur l'activité économique qui figure dans les bulletins de recensement ne concerne que les personnes ayant dépassé un âge minimum fixé en fonction de l'âge minimum légal d'admission à l'emploi et de l'âge de fin de scolarité obligatoire. Non seulement cette méthode ne permet pas de connaître le nombre d'enfants qui occupent un emploi bien qu'ils n'aient pas atteint un âge minimum, mais encore elle compromet fortement la comparabilité des données à cause de la diversité des âges choisis; en outre, le classement des données ne permet généralement pas de retrouver tous les enfants au-dessous d'un âge donné, dans les répartitions par branche d'activité économique notamment. Il suffit de consulter le tableau 12 pour constater que 17 pays ont fixé l'âge minimum à 15 ans, 36 à 14 ans, 8 à 12 ans, 27 à 10 ans, au dernier recensement. Il est evident que, dans ces conditions, la fraction de la population totale considérée comme active ne peut être exactement la même d'un pays à l'autre. Pour assurer la comparabilité des données, il faut fixer une limite d'âge arbitraire.

Les problèmes de comparabilité posés par le manque d'uniformité des définitions, dont il a déjà été question, concernent surtout les statistiques relatives aux femmes, adolescents et personnes âgées, car un grand nombre de personnes appartenant à ces groupes sont des travailleurs familiaux non rémunérés ou font des travaux saisonniers à temps partiel ou des travaux intermittents. Ainsi, le degré de comparabilité des statistiques relatives aux hommes est, en général, bien supérieur à celui des statistiques qui se rapportent aux femmes; ce sont donc les données relatives aux hommes se trouvant dans l'intervalle d'âge de travail médian qui se prêtent le mieux aux comparaisons internationales.

Quand on apprécie la comparabilité des statistiques, il ne faut pas oublier que les données fournies par les recensements et les enquêtes en ce qui concerne la structure économique de la population se rapportent à une période déterminée, proche de la date du dénombrement. Ce ne sont point des statistiques courantes. Par suite, et bien que les caractéristiques économiques se modifient lentement, il faudra tenir compte des changements intervenus avec le temps, particulièrement en périodes anormales, telles que les périodes de guerre ou d'après guerre. En outre, la comparabilité des statistiques de différents pays pour la même année dépend parfois de la structure de la main-d'œuvre saisonnière propre à chaque pays. Parmi les facteurs à prendre en considération dans ce domaine, on peut citer le déplacement de la main-d'œuvre vers le secteur agricole au moment de la moisson, l'emploi des femmes et des étudiants dans la distribution, etc. pendant la période dès vacances et l'alternance de l'activité professionnelle suivant la saison sèche ou la saison humide dans certains pays.

Tableau 13

Le tableau 13 renferme des données nouvelles et revisées sur l'évolution des naissances vivantes pour les années 1950 à 1959 ainsi que des taux bruts de natalité.

Presque toutes ces données reposent sur l'enregistrement des naissances vivantes par les services de l'état civil, mais on a publié en outre, chaque fois qu'il en existait, des taux estimatifs officiels, qui représentent sans doute plus fidèlement le niveau réel de la natalité dans les régions où l'enregistrement est particulièrement incomplet. Les estimations ont été établies à partir des résultats de sondages, par l'analyse des données de recensements consécutifs, etc., la méthode étant chaque fois précisée dans une note.

Dans le tableau 13 la qualité des données est indiquée par les lettres et signes conventionnels C, U ou . . . , qui figurent dans la première colonne; on a exposé plus haut à la page 71 la manière d'interpréter correctement ce code. Pour les pays qui ont communiqué des évaluations précises, des notes de bas de page signalent en outre le

degré de complétude de l'enregistrement exprimé en pourcentage.

Les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : Les statistiques présentées dans le tableau 13 intéressent au total 194 pays et territoires. Le tableau 13 donne des renseignements sur les principaux pays, même lorsqu'il n'existe pas de données récentes à leur sujet, ainsi que des chiffres se rapportant seulement à certains groupes de population quand il a été impossible d'obtenir des statistiques pour l'ensemble du territoire. Les statistiques concernant les groupes en question n'ont rien de représentatif; on les a retenues seulement pour indiquer les pays et territoires où se rassemblent normalement des statistiques de la natalité. Comme les taux calculés à partir de très petits nombres comportent souvent des erreurs importantes, on a exclu quelques pays pour lesquels les fréquences étaient toujours inférieures à 15.

Calcul des taux : Les taux annuels bruts donnés dans le tableau 13 représentent le nombre des naissances vivantes survenues pour 1 000 habitants selon l'estimation de la population au milieu de l'année.

En général, les chiffres de population auxquels ont été rapportés les nombres de naissances sont les estimations officielles au milieu de l'année qui sont reproduites dans le tableau 4. On s'est toujours efforcé d'établir une correspondance rigoureuse entre le numérateur (naissances) et le dénominateur (population) des taux, et l'on a indiqué, en note, les cas où l'on n'a pas pu y parvenir.

Insuffisances des données : On trouvera ailleurs toutes les explications nécessaires sur les incidences du code de qualité ainsi que sur la classification des données en données de bonne qualité et données discutables à laquelle conduit son application.

Pour interpréter les statistiques de ce tableau, il faudra également tenir compte des effets de l'exploitation des données selon la date de l'enregistrement plutôt que selon celle de l'événement. Les pays dont on sait qu'ils établissent leurs statistiques d'après la date de l'enregistrement sont marqués d'une croix (†) figurant dans la même colonne que les notations codiques, ce qui permet d'évaluer immédiatement l'effet combiné des deux facteurs. Il importe de souligner que, là où le décalage entre l'événement et son enregistrement est grand, c'est-à-dire là où une forte proportion des naissances vivantes fait l'objet de déclarations tardives, comme c'est le cas dans certaines régions d'Amérique latine, d'Asie et d'Afrique, l'exploitation des statistiques des naissances vivantes d'après la date de l'enregistrement peut donner une idée très inexacte, ou même totalement fausse, des tendances de la natalité. Souvent, ces statistiques conduisent à des taux de natalité qui paraissent tout à fait vraisemblables, alors même que l'on sait que bon nombre de naissances n'ont pas été enregistrées. En pareil cas, les lacunes de l'enregistrement sont masquées par l'inclusion de naissances survenues les années précédentes et les chiffres obtenus peuvent conduire à de grosses erreurs d'interprétation, particulièrement en ce qui concerne les caractéristiques de la fécondité.

On a indiqué dans les notes les pays où les statistiques des naissances vivantes ne tiennent pas compte, par définition, des enfants nés vivants et décédés avant l'enregistrement de leur naissance ou dans les 24 heures qui ont suivi la naissance. Cette exclusion conduit à sous-estimer la natalité; l'importance générale de cette erreur est discutée dans le *Manuel de statistique de l'état civil*[42].

Abstraction faite de leurs insuffisances, les taux bruts de natalité permettent de mesurer l'augmentation brute de la population par accroissement naturel. Ils peuvent donner également une idée générale des tendances de longue période dans un pays ou un territoire donné, ainsi que des indications permettant de classer approximativement les pays selon le niveau de la natalité. Mais, comme la structure de la population selon l'âge et le sexe varie d'un pays à l'autre, les taux bruts ne traduisent pas exactement les différences de fécondité et ne permettent donc pas, à eux seuls, d'évaluer la tendance présente ni de prévoir les mouvements futurs.

Tableau 14

Le tableau 14 est consacré aux naissances vivantes selon l'âge de la mère. Les groupes d'âge représentés sont d'abord consacrés aux personnes de moins de 15 ans, ensuite groupes quinquennaux jusqu'à 49 ans, puis 50 ans et plus et enfin âge inconnu. Comme dans les autres tableaux où il existe une classification par âge, l'âge est calculé au dernier anniversaire ou en années révolues.

Les données qu'on estime être de qualité discutable ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée: On a publié dans le tableau les dernières données qu'on a pu se procurer sur ce sujet, nouvelles ou rectifiées, pour 110 pays et territoires annonçant 50 naissances ou plus même dans le cas où elles se rapportent à des années assez anciennes. Ce tableau peut donc être considéré comme un index des pays qui classent les naissances vivantes d'après l'âge de la mère et fournir également des indications précieuses sur le degré d'actualité de ces statistiques.

Insuffisances des données: La comparabilité de ces données est affectée par des différences dans la méthode d'exploitation, c'est-à-dire d'après la date de l'événement ou celle de l'enregistrement. Une croix (†) dans la colonne de gauche du tableau indique les pays qui établissent leurs statistiques d'après la date de l'enregistrement et les conséquences de ce procédé ont déja été exposées à la page 74.

Comme ces statistiques sont classées par âge, elles sont affectées des mêmes limitations en ce qui concerne l'exactitude des déclarations d'âge que celles déjà mentionnées à propos de la répartition de la population selon l'âge et le sexe. Si aucun nombre ne figure dans la colonne réservée aux âges inconnus, cela ne signifie pas nécessairement que la transmission et l'exploitation des données par âge aient été tout à fait exactes. C'est souvent une indication que l'on a attribué un âge aux personnes "d'âge inconnu" avant l'exploitation des données ou qu'ils ont été répartis proportionnellement entre les différents groupes après cette opération. D'autre part, un nombre de personnes d'âge inconnu peut signifier qu'il s'agit d'enfants illégi-

[42] *Op. cit.*, chapitre IV.

times pour lesquels les indications relatives à la naissance sont rarement complètes.

Il importe de garder à l'esprit également, lorsqu'on utilisera ces données, que certains pays calculent l'âge de la mère à la naissance de l'enfant (ou à l'enregistrement de cette naissance), c'est-à-dire à partir de la date exacte de l'événement (jour, mois et année) alors que d'autres ne prennent pour base que l'année seulement. On a indiqué en note ces différences de méthode lorsqu'on en a eu connaissance.

Le défaut de comparabilité, à la fois entre les données de ce tableau se rapportant à des pays différents et ces données et celles du tableau 13, est dû à un certain nombre de causes. Quelquefois, les données selon l'âge se rapportent aux accouchements plutôt qu'aux naissances vivantes; en outre, dans certains cas les accouchements en question correspondent seulement à ceux d'enfants nés vivants tandis que, dans d'autres, ils concernent les accouchements soit d'enfants nés vivants, soit de mort-nés. Certains pays ne répartissent que les naissances légitimes par âge de la mère alors que les nombres relatifs aux naissances vivantes du tableau 13 se rapportent à toutes les naissances, légitimes ou non. Dans la plupart des cas cette restriction est peu importante, mais lorsque les naissances illégitimes sont relativement nombreuses, on ne peut considérer les données limitées aux seules naissances légitimes comme significatives. De même, dans d'autres pays, la répartition des naissances vivantes par âge de la mère ne porte que sur les enfants nés vivants qui ne sont pas décédés avant l'enregistrement de leur naissance tandis que les totaux du tableau 13 comprennent ceux qui sont décédés avant l'enregistrement.

Tableau 15

Ce tableau indique le nombre des décès survenus chaque année entre 1950 et 1959 avec les taux bruts de mortalité correspondants.

Pour les pays où des registres de l'état civil sont inexistants ou très inexacts il a été possible, dans certains cas, de donner des taux estimatifs qui sont censés représenter de façon plus exacte les niveaux réels de la mortalité. Ces taux officiels pour certaines années isolées ont été obtenus au moyen de sondages, par analyse des résultats de recensements consécutifs ou par conjecture. Afin de les distinguer des taux reposant sur des données d'enregistrement, on a signalé leur caractère spécial dans des notes.

Conformément à la pratique habituelle, le symbole (C, U ou . . .) qui figure dans la première colonne du tableau indique la qualité des données; en outre, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : Le tableau 15 indique le nombre des décès et les taux de mortalité pour 190 unités géographiques. Tous les pays et territoires importants figurent dans ce tableau, même si les données qui s'y rapportent ne sont pas récentes; les données se rapportant à des fractions de la population, par exemple à la population non indigène ou à la population d'une grande ville, ont été retenues lorsqu'on ne disposait pas de statistiques pour l'ensemble du pays. Ces données ne sont pas très représentatives, mais elles indiquent du moins quels sont les pays et territoires où il existe des statistiques de la mortalité. Etant donné que les taux basés sur de très petits nombres de décès peuvent être entachés d'erreurs importantes, il n'a pas été tenu compte de quelques pays et territoires où le nombre des décès est ordinairement inférieur à 15.

Calcul des taux : Les taux bruts annuels qui figurent dans le tableau 15 représentent le nombre des décès signalés pendant l'année civile pour 1 000 personnes présentes au milieu de l'année ou, quelquefois, à la date du recensement ou à quelque autre moment de l'année. En général, les chiffres de population qui ont servi de base pour le calcul des taux sont ceux du tableau 4.

On s'est efforcé d'assurer une correspondance rigoureuse entre le numérateur (décès) et le dénominateur (population) des taux; on a signalé par des notes les cas où cette correspondance n'a pas pu être établie.

Insuffisances des données : Bien que le fait ait surtout de l'importance en ce qui concerne les naissances vivantes, on a distingué les pays selon que les statistiques y sont établies d'après la date de l'événement ou d'après celle de l'enregistrement; ceux où les données sont exploitées selon la date de l'enregistrement sont marqués d'une croix (†). Les conséquences de ce mode d'exploitation sont exposées à la page 72.

Les possibilités d'erreurs dues à l'exclusion des décès d'enfants survenus avant l'enregistrement de la naissance ne sauraient non plus être négligées. On pourra les apprécier en examinant les données pour la Guadeloupe et la Martinique qui figurent dans l'*Annuaire démographique* de 1957[43].

En plus de ces causes de variations, dont les effets ne sont pas très graves, il convient de souligner que les taux bruts ne tiennent nullement compte des différences de structure par âge et par sexe; comme la mortalité est plus forte aux premiers âges et aux âges avancés, on ne peut donc pas dire qu'ils soient strictement comparables d'une population à l'autre, ou d'une période à l'autre pour la même population, et la prudence s'impose dans toutes les comparaisons entre pays.

Tableau 16

Le tableau 16 renferme des statistiques de la mortalité infantile (décès d'enfants de moins de 1 an et taux de mortalité infantile) pour la période de 1950 à 1959. Pour donner une idée de la mortalité infantile dans les pays et territoires où les registres sont défectueux ou inexistants, on a publié aussi des taux estimatifs officiels calculés à partir de différents types de données. Afin que le lecteur puisse les distinguer des taux calculés à partir de données enregistrées, leur nature est précisée dans des notes.

Conformément à la pratique habituelle, le symbole (C, U ou . . .) qui figure dans la première colonne du tableau indique la qualité des données; en outre, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explication à la page 71.

Portée : Les données de ce tableau se rapportent à la population présente dans les 157 pays et territoires qui ont fourni des statistiques récentes sur la mortalité

[43] Tableau 7.

infantile. Dans certains cas, les chiffres ne concernent qu'une fraction de la population; bien qu'ils ne soient pas très représentatifs, on les a reproduits pour donner une idée de la statistique des décès d'enfants dans l'ensemble du monde.

Calcul des taux : Calculés suivant la méthode classique, les taux de mortalité infantile publiés dans le tableau 28 représentent le nombre de décès d'enfants de moins de 1 an pour 1 000 naissances vivantes survenues pendant la même période. Autrement dit, il n'est pas tenu compte du fait que certains des décès qui se produisent pendant une année donnée sont ceux d'enfants nés au cours de l'année précédente. Toutefois, l'erreur n'est pas grave, à moins que le nombre des naissances vivantes ou des décès d'enfants de moins de 1 an ne varie rapidement[44].

Insuffisances des données : Si la comparabilité des taux de mortalité infantile est limitée, c'est surtout et le plus souvent parce que les statistiques des décès d'enfants de moins de 1 an et des naissances vivantes sont établies d'après la date de l'enregistrement, indépendamment de la date de l'événement. Quand, pour une raison quelconque, le nombre des naissances vivantes enregistrées pendant une année donnée augmente fortement, il peut en résulter des erreurs considérables dans les taux de mortalité infantile, d'autant plus que les décès sont, en règle générale, déclarés plus rapidement que les naissances.

Si le retard apporté à l'enregistrement reste presque constant et s'il est à peu près le même pour les naissances et pour les décès, les taux ne sont pas faussés trop sensiblement. Mais si une grande partie des naissances ne sont enregistrées qu'après plusieurs années, comme c'est le cas dans beaucoup de pays, les taux de mortalité infantile obtenus en rapportant le nombre des décès d'enfants de moins de 1 an survenus pendant une année à celui de naissances échelonnées sur plusieurs années n'ont guère de valeur. Comme ce facteur est important, en particulier pour les naissances vivantes, qui constituent le dénominateur des taux de mortalité infantile, on a marqué d'une croix (†) les statistiques que l'on sait établies d'après la date de l'enregistrement.

Même lorsque les statistiques sont établies d'après la date de l'événement, toute lacune dans l'enregistrement des naissances et des décès d'enfants de moins de 1 an a également pour effet de fausser les taux de mortalité infantile, à moins que la proportion des faits enregistrés ne soit la même pour le numérateur et pour le dénominateur. Les symboles C ou U du code expliqué en détail à la page 71 aideront le lecteur à se faire une idée de la qualité des données.

Ce code qui, faute de renseignements précis, correspond essentiellement à celui du tableau 15 relatif aux décès à tous âges, indique plus particulièrement ici dans quelle mesure l'enregistrement et la transcription des décès d'enfants de moins de 1 an sont complets. Comme on l'a noté plus haut, les différences de complétude entre les éléments constitutifs du taux de mortalité infantile, à savoir les décès d'enfants de moins de 1 an et les naissances vivantes, introduisent des erreurs par excès ou par défaut, le sens de l'erreur dépendant de celui des deux éléments (numérateur ou dénominateur) pour lequel l'enregistrement est le plus complet. Il n'a pas été tenu compte de ce facteur pour le choix du caractère typographique qui distingue ailleurs les données sujettes à caution des autres; dans tous les cas, les taux sont reproduits ici avec le même caractère que les fréquences correspondantes.

Un autre facteur qui influe sur la complétude de l'enregistrement des naissances vivantes et des décès d'enfants de moins de 1 an est la définition adoptée, à des fins statistiques, pour les événements à déclarer. La pratique consistant à n'inscrire ni dans le registre des naissances ni dans celui des décès les enfants nés vivants qui sont morts dans les 24 heures ou avant l'enregistrement de leur naissance, peut fausser les statistiques: le taux risque alors d'être entaché d'une erreur par défaut. Si les nouveau-nés qui meurent pendant les premières semaines ne sont pas enregistrés parmi les naissances vivantes, la comparabilité des taux de mortalité infantile risque aussi d'en souffrir, mais l'erreur ne peut alors être qu'une erreur par excès.

Tableau 17

Le tableau 17 est le tableau habituel illustrant la tendance des morts fœtales et des rapports de mortinatalité correspondants pour toutes les années allant de 1950 à 1959. Toutes ces données sont tirées des renseignements sur la mortinatalité fournis par les registres de l'état civil.

Aux fins du tableau 17, mort fœtale tardive s'entend du décès d'un fœtus survenant après 28 semaines complètes de gestation au moins, mais avant l'expulsion complète du corps de la mère. Chaque fois que l'on a pu déterminer en quoi les statistiques présentées s'écartent de cette définition, on l'a indiqué dans une note. On n'a pas de renseignements complets et précis sur la façon dont les mort-nés sont définis dans tous les pays et territoires ni pour toutes les années auxquelles se rapportent les statistiques, mais le lecteur gagnera à consulter sur ce point le *Manuel de statistique de l'état civil*[45].

Conformément à la pratique habituelle, le symbole (C, U ou . . .), qui figure dans la première colonne du tableau, indique la qualité des données; en outre, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : La nomenclature du tableau 17 comprend 134 pays et territoires. On trouvera dans ce tableau des renseignements sur les principales unités géographiques, même lorsqu'il n'existe pas de données récentes à leur sujet, ainsi que des chiffres se rapportant à certains groupes de population seulement, quand il a été impossible d'obtenir des statistiques pour l'ensemble du territoire. Les statistiques concernant les groupes de population n'ont rien de représentatif; on les a retenues seulement pour indiquer les pays et territoires où l'on établit normalement des statistiques de la natalité.

Comme les rapports calculés à partir de très petits nombres comportent souvent des erreurs importantes,

[44] Pour un exposé critique plus détaillé sur ce problème, voir "Mesure de la mortalité infantile" par W.P.D. Logan. *Bulletin démographique des Nations Unies*, Département des questions sociales, Division de la population. Document ST/SOA/SER.N/3, octobre 1953, p. 32 à 72 (numéro de vente : 1953. XIII.8).

[45] *Op. cit.*, chapitre IV, annexe 3.

on a exclu quelques pays pour lesquels les fréquences étaient toujours inférieures à 15. Des rapports sont indiqués pour tous les autres pays, encore qu'ils soient, dans certains cas, sujets à caution. Puisque les nombres absolus correspondants apparaissent aussi dans le tableau, il n'a pas été nécessaire d'appeler l'attention sur les rapports calculés à partir de fréquences comprises entre 15 et 50. Avant de tirer des conclusions des rapports indiqués, le lecteur se reportera naturellement aux nombres absolus.

Calcul des rapports : Les rapports publiés dans le tableau 17 représentent le nombre de morts fœtales tardives déclarées pour 1 000 naissances vivantes survenues pendant la même période. Conformément aux recommandations de l'ONU[46], ce sont les naissances vivantes et non la somme des naissances vivantes et des morts fœtales tardives que l'on a retenues comme dénominateur.

Tous les rapports ont été calculés au Bureau de statistique de l'ONU, sur la base des naissances vivantes du tableau 13, sauf les rapports officiels pour la *Proclaimed Area* (région à régime spécial) de Ceylan, où les données sur les naissances vivantes correspondant aux morts fœtales faisaient défaut, et les rapports de certaines années pour le Ghana, où l'on ne disposait d'aucun des deux éléments.

Insuffisances des données : On sait que les morts fœtales sont incomplètement enregistrées dans la plupart des pays; aussi les données sont-elles reproduites en italique dans presque tous les cas. Cependant, il convient de remarquer que, si l'enregistrement est défectueux à la fois pour les morts fœtales et pour les naissances vivantes, les rapports de mortinatalité peuvent être tout à fait raisonnables. En fait, c'est parfois pour les pays où l'enregistrement des naissances vivantes laisse le plus à désirer que les rapports de mortinatalité sont le plus élevés, ce qui masque l'incomplétude des données de base. Aussi, pour porter un jugement sur la qualité des rapports de mortinatalité, il ne faut jamais oublier que la complétude de l'enregistrement des naissances — comme celle de l'enregistrement des morts fœtales tardives — peut varier sensiblement.

En dehors des effets indirects des lacunes de l'enregistrement des naissances vivantes, il arrive que les rapports de mortinatalité soient sérieusement faussés lorsque l'exploitation des naissances se fait d'après la date de l'enregistrement. Si le nombre des naissances vivantes enregistrées vient à varier notablement d'une année à l'autre par suite de modifications de la législation ou parce que des groupes importants de population ont un intérêt particulier à posséder une attestation de naissance, les rapports de mortinatalité varient également, mais en sens contraire. Il convient donc d'utiliser avec prudence les données des pays où les statistiques sont établies d'après la date de l'enregistrement, à moins qu'on ne sache aussi que les données exploitées d'après la date de l'enregistrement diffèrent peu de celles qui sont exploitées d'après celle de l'événement.

Enfin, on notera que l'inclusion parmi les mort-nés des enfants nés vivants qui meurent avant l'enregistrement de leur naissance conduit à des rapports de mortinatalité exagérés parce que le dénominateur (nombre des naissances) se trouve alors diminué et le numérateur (morts fœtales) augmenté. Il importe de ne pas négliger ce facteur lorsqu'on utilise les données du tableau 17. Les effets éventuels en sont exposés aux pages 61-64 du *Manuel de statistique de l'état civil*[47].

[46] *Manuel de statistique de l'état civil, op. cit.*, p. 284.

Tableau 18

Les dernières statistiques disponibles sur la répartition des décès selon l'âge et le sexe pour divers pays et territoires sont publiées dans le tableau 18. Ainsi, grâce à ce tableau et au tableau 12 qui lui correspond dans l'*Annuaire démographique* de 1958, ainsi qu'au tableau 26 dans celui de 1959 se trouve mise à jour la série chronologique qui figurait dans l'*Annuaire démographique* de 1957.

L'âge est exprimé en années révolues. Le classement par âge, qui est conforme aux recommandations internationales[48], comprend les groupes suivants: moins de 1 an, 1 à 4 ans, groupes quinquennaux jusqu'à 84 ans, 85 ans et plus et un groupe d'âge inconnu.

Les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : Les données présentées se rapportent à 149 unités géographiques. La nomenclature du tableau comprend tous les pays et territoires qui ont signalé au moins 50 décès classés comme il est dit ci-dessus, mais certaines des données sont de portée (géographique ou ethnique) restreinte. Le tableau permet donc de voir quels sont les pays où les statistiques des décès sont exploitées selon l'âge et le sexe et si le classement par âge adopté est celui qu'a recommandé l'Organisation des Nations Unies.

Insuffisances des données : Les données du tableau 18 appellent les réserves indiquées par le code de complétude que l'on a décrit à propos des statistiques de l'état civil en général (page 71) et qui figure dans le tableau 15. La comparabilité des données peut aussi être influencée dans une certaine mesure par des différences de méthode d'exploitation. Une croix (†) désigne les pays où les données sont exploitées selon la date de l'enregistrement, au lieu de la date de l'événement.

Dans quelques séries, l'exclusion des décès d'enfants qui meurent avant l'enregistrement de leur naissance et qui, de ce fait, sont seulement comptés comme mort-nés ou "présentés sans vie" peut également contribuer au défaut de comparabilité, tant pour ce qui est du total des décès que pour les décès d'enfants de moins de 1 an. Lorsque l'on sait que ce facteur a joué, on l'a signalé en note au bas du tableau.

Comme ces données sont classées par âge, elles sont plus ou moins faussées par les inexactitudes de déclaration d'âge dont il a été question à propos de l'état de la population (voir page 63). Dans le cas des statistiques de l'état civil, les facteurs qui interviennent à cet égard sont parfois un peu différents, étant donné que le recensement et l'enregistrement des décès se font par des méthodes différentes, mais, d'une manière générale, les erreurs observées sont les mêmes.

[47] *Op. cit.*

[48] *Principes directeurs d'un système de statistiques de l'état civil, op. cit.*, Principe 410 e) 9).

Comme dans les tableaux de population, l'absence de chiffre pour le groupe d'âge inconnu ne signifie pas nécessairement que les déclarations d'âge sont complètes; elle peut indiquer aussi qu'on a éliminé les personnes d'âge inconnu, soit en leur attribuant un âge avant l'exploitation, soit en les répartissant proportionnellement entre tous les groupes d'âge après cette opération.

Tableau 19

Le tableau 19 présente des statistiques des causes de décès (nombres absolus et taux) pour la dernière année pour laquelle on possède des données.

La classification des causes de décès utilisée est la Liste abrégée de 50 rubriques pour la mise en tableaux des causes de mortalité figurant dans la sixième revision (1948) de la Nomenclature internationale des causes de décès[49]. Aucune série établie d'après les revisions précédentes de la Nomenclature n'est présentée ici; les séries établies d'après la revision de 1955 sont indiquées en note.

Les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : 70 pays et territoires sont représentés dans ce tableau. Les critères utilisés pour déterminer s'il convenait ou non de retenir les données relatives à tel ou tel pays ou territoire ont été, premièrement, le classement selon la Liste abrégée mentionnée plus haut ou la possibilité de passer par conversion aux catégories de cette liste; deuxièmement, le fait que la répartition selon la cause portait sur 1 000 décès ou davantage et, troisièmement, le fait qu'à l'intérieur de cette répartition, le nombre total des décès dus à la sénilité ou à des causes mal définies (B45) ne dépassait pas 25 pour cent du nombre total des décès pour toutes les causes. Si le deuxième critère a été appliqué, c'est parce que des taux calculés à partir de petits nombres seraient sujets à caution; on trouvera dans l'édition de 1957 de l'*Annuaire démographique* et dans les éditions antérieures spécialement consacrées à la mortalité des statistiques complètes sur les décès classés selon la cause, quel que soit leur nombre. Le dernier critère est fondé sur l'argument suivant: si 25 pour cent des décès sont classés comme dus à la sénilité ou à des causes mal définies ou inconnues, les chiffres relatifs aux 49 autres causes de la Nomenclature doivent être très inférieurs à la réalité. La limite a été fixée délibérément à un niveau élevé; il serait peut-être préférable qu'elle soit placée à 10 pour cent pour éliminer toutes les données défectueuses. D'ailleurs, le critère adopté ne tient pas compte d'un autre pourcentage significatif, celui des décès classés sous B46 (toutes autres maladies), catégorie qui comprend souvent une proportion anormalement forte de l'ensemble des décès.

Calcul des taux : Les taux de mortalité selon la cause sont exprimés pour 100 000 personnes dans la population totale selon l'estimation au milieu de l'année ou à un autre moment de l'année. En conséquence le taux pour toutes les causes combinées est la somme des taux relatifs à chacune d'elles et représente 100 fois le taux brut de mortalité du tableau 15.

Tous les taux ont été calculés à partir des chiffres de population du tableau 4.

Insuffisances des données : Les statistiques des causes de décès, qui sont de la plus grande importance pour les études sur la santé publique et les études démographiques, présentent malheureusement de nombreuses imperfections, outre celles qu'on a déjà mentionnées comme limitant la comparabilité internationale des statistiques de l'état civil en général et des statistiques de la mortalité en particulier (voir page 73). Ces imperfections supplémentaires sont liées principalement aux différences existant entre les pays du point de vue de la qualité, du degré de développement et de l'efficacité des services médicaux ainsi que des méthodes d'établissement des certificats de décès et des procédés de codage. Pour plus de détails, voir l'*Annuaire démographique* de 1957, pages 86-87.

Les anomalies connues sont signalées dans des notes de bas de page. Toutefois, il faudra interpréter avec beaucoup de prudence les répartitions comportant un nombre relativement élevé de décès attribués à la sénilité ou à des causes mal définies ou inconnues (B45). Les répartitions comportant 25 pour cent ou plus de décès attribués à cette cause n'ont pas été présentées dans le tableau (voir Portée), mais d'autres statistiques d'une qualité douteuse y figurent. Il convient aussi d'examiner de très près le groupe toutes autres maladies (B46). Si les chiffres donnés pour ces deux catégories (B45 et B46) sont importants, c'est sans doute parce que les décès survenus dans de nombreux groupes de population n'ont fait l'objet d'aucun diagnostic; en pareils cas, il est probable que la répartition des causes connues sera loin de donner une vue exacte de la situation d'ensemble. Cet examen critique des répartitions, ainsi que l'utilisation du code général de qualité présenté dans le tableau 15 et le fait que les statistiques sujettes à caution sont reproduites en italique pour les distinguer des autres, devraient permettre de se faire une idée approximative de la valeur des statistiques des causes de décès.

Tableau 20

On verra cette année dans le tableau 20 ce qu'ont été les tendances annuelles de la nuptialité et des taux de nuptialité pendant la période 1950-1959.

Sauf indication contraire, les statistiques se rapportent à des mariages célébrés officiellement, c'est-à-dire à l'union légale de personnes de sexe différent, l'union pouvant être rendue légale par une procédure civile ou religieuse ou par toute autre procédure reconnue par la loi du pays. Ce sont des statistiques des mariages, non des statistiques des personnes qui se marient.

Conformément à la pratique habituelle le symbole (C, U ou ...) qui figure dans la première colonne du tableau indique la qualité des données; en outre, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : Le tableau 20 donne des statistiques de la nuptialité et des taux bruts de nuptialité pour 158 pays et

[49] *Manuel de classement statistique international des maladies, traumatismes et causes de décès*, Sixième revision des Nomenclatures internationales des maladies et causes de décès, adoptée en 1948, vol. 1 (Bulletin de l'Organisation mondiale de la santé, Supplément 1, Genève, 1948).

territoires. Tous les pays importants figurent dans la nomenclature du tableau, même ceux pour lesquels on ne possède pas de données récentes; en l'absence de statistiques pour l'ensemble d'un pays, on a présenté des données pour de petits groupes de population. Ces données n'ont guère de valeur en elles-mêmes, mais elles permettent d'identifier les pays pour lesquels il existe des statistiques de la nuptialité de portée nationale.

Etant donné que les taux calculés sur de très petits nombres sont sujets à des erreurs importantes, on a exclu quelques pays ou territoires accusant régulièrement des fréquences inférieures à 15.

Calcul des taux : Les taux du tableau 20 indiquent le nombre de mariages enregistrés pour 1 000 personnes présentes au milieu de l'année considérée. Les chiffres de population sont les chiffres officiels et, en général, ceux qui figurent dans le tableau 4. On s'est efforcé de réaliser une correspondance rigoureuse entre le numérateur du taux (mariages) et le dénominateur (population) ; on a indiqué en note les cas où cette correspondance a été impossible.

Insuffisances des données : Presque toutes les réserves faites à propos des statistiques de l'état civil à la page 71, et toutes celles qui ont été formulées au sujet des statistiques de la nuptialité en particulier s'appliquent aux données du présent tableau. Leur qualité varie en raison des différences qui existent d'un pays à un autre dans les définitions utilisées aux fins de la statistique; dans la mesure où elles ne tiennent pas compte des unions consensuelles, elles donnent une idée trompeuse de la formation des familles biologiques; enfin, si elles sont incomplètes, elles ne donnent même pas une bonne indication du nombre des mariages reconnus par la loi. Toutefois, il importe de souligner que, le mariage étant un acte juridique et non un fait biologique, le problème de la comparabilité des données du point de vue de la complétude se présente sous un aspect un peu différent. Il convient d'en tenir compte pour interpréter les notations codiques (C ou U) qui indiquent la qualité des données dans la première colonne du tableau.

Les taux sont d'excellents indices de la fréquence des unions consensuelles, car, pour les mariages reconnus par la loi, l'intervalle de variation des taux est assez étroit; les variations marquées sont donc presque toujours dues à une prépondérance des unions de fait par rapport aux unions de droit. L'influence de ce facteur sur la comparabilité des données est particulièrement évidente pour certaines parties de l'Amérique latine et de l'Afrique où les taux de nuptialité sont anormalement faibles.

Comme on le verra dans les notes, il n'a pas toujours été possible, pour le calcul des taux, d'obtenir une correspondance rigoureuse entre le numérateur et le dénominateur. Par exemple, les mariages parmi la population civile et les militaires sont parfois rapportés à la population civile. Cela peut avoir pour effet d'accroître les taux; au contraire si la population de base englobe un plus grand nombre de personnes que celle dans laquelle les mariages ont été comptés, les taux seront plus faibles, mais, dans la plupart des cas, il est probable que la différence sera négligeable. Voir à ce sujet la série des taux pour Guam.

Le signe (†) sert ici, comme ailleurs dans l'*Annuaire démographique,* à indiquer que les statistiques ont été établies d'après la date de l'enregistrement, et non d'après celle de l'événement, c'est-à-dire, dans le cas présent, de la célébration. Comme on l'a signalé à la page 72 cette précision n'est pas très importante en ce qui concerne les mariages, étant donné que, dans la plupart des cas, l' "enregistrement" et la "célébration" se confondent. Dans certains pays cependant, il s'écoule parfois un laps de temps assez long entre la célébration du mariage et son enregistrement[50]; il faudra donc en tenir compte pour interpréter les données.

Enfin, il convient de souligner que les taux bruts de nuptialité — de même que les taux bruts de natalité et de mortalité — ne sont pas des indices de probabilité, puisqu'ils ne tiennent pas compte de la répartition selon l'âge, le sexe et l'état matrimonial de la population à laquelle ils se rapportent. Néanmoins, ils mesurent les niveaux de la nuptialité et les fluctuations de la fréquence des mariages. Pour plus de détails sur l'utilisation des taux bruts de nuptialité, voir le chapitre I de l'*Annuaire démographique* de 1958.

Tableau 21

Le tableau 21 indique le nombre de mariages classés selon l'âge de l'épouse, d'une part, et selon l'âge de l'époux, d'autre part, en ce qui concerne l'année la plus récente pour laquelle on possède des chiffres. Avec ce tableau, où est indiqué l'âge des conjoints au moment du mariage, se trouvent mises à jour les statistiques décennales présentées dans l'*Annuaire démographique* de 1958.

L'âge est exprimé en années révolues au dernier anniversaire, conformément aux recommandations de l'Organisation des Nations Unies[51], et le classement par âge est celui qu'a recommandé l'Organisation des Nations Unies[52], modifié de façon à gagner un peu de place; on a utilisé 12 catégories : moins de 15 ans, groupes quinquennaux jusqu'à 59 ans, 60 ans et plus, et enfin âge inconnu. Contrairement à l'usage des années précédentes, on a adopté la même classification pour les deux sexes.

Les données classées comme discutables (incomplètes) par application du code de qualité (voir page 71) sont reproduites en italique. Si l'on admet que ces données sont incomplètes au même degré pour tous les âges, on peut dire qu'elles permettent de se faire une idée de la façon dont les mariages se répartissent selon l'âge, même si les nombres absolus sont inexacts.

Portée : On trouvera dans le tableau 21 des statistiques de la nuptialité selon l'âge des conjoints pour 112 pays ou territoires, indépendants ou non; les seuls pays ou territoires qui n'y figurent pas sont ceux pour lesquels les statistiques portent sur moins de 50 mariages. Tous les pays importants figurent dans la nomenclature du tableau, même ceux pour lesquels on ne possède pas de données récentes; en l'absence de statistiques pour l'ensemble de la population, on a présenté des données pour de petits groupes ethniques.

[50] *Manuel de statistique de l'état civil, op. cit.,* tableau 10, p. 100-101.

[51] *Principes directeurs d'un système de statistiques de l'état civil, op. cit.,* Principe 309 c) , 1) .

[52] *Ibid.,* Principe 410 e) , 23) .

Insuffisances des données : Toutes les imperfections relatives aux statistiques de l'état civil en général et aux statistiques de la nuptialité en particulier influent sur la comparabilité des données du tableau 21. Comme pour le tableau 20, on a supposé qu'il fallait entendre par mariages les unions officiellement reconnues, contractées conformément à la loi de chaque pays. Toutes les exceptions à cette norme sont signalées dans des notes; il s'agit notamment des cas où les statistiques reposent sur le nombre des autorisations de mariage délivrées ou des mariages inscrits sur les registres des églises seulement, ou encore des cas où elles comprennent les unions reconstituées après une séparation, etc.

Le facteur âge compte aussi parmi les causes d'erreur. L'influence des erreurs de déclaration d'âge a été étudiée à la page 63 à propos des recensements de population. Il est probable que les statistiques de la nuptialité sont moins faussées par ce genre d'erreur, car les renseignements sont donnés par les intéressés eux-mêmes et, comme il s'agit d'un acte juridique, les déclarations faites pour l'enregistrement du mariage sont probablement exactes. Toutefois, dans certains cas, il semble y avoir une concentration anormale des mariages à l'âge légal, ce qui peut indiquer que certains déclarants se vieillissent pour se conformer à la loi. Comme autre facteur pouvant exercer une influence sur les déclarations d'âge parmi les personnes plus âgées, il faut citer la tendance des femmes à se donner un âge soit égal soit inférieur à celui de l'époux.

Pour les premiers groupes d'âge, c'est-à-dire jusqu'à 24 ans, la comparabilité des données d'un pays à l'autre risque également d'être limitée par les variations de l'âge minimum au mariage. On n'a pas à ce sujet de données pour tous les pays et même lorsqu'on en possède une certaine confusion subsiste sur ce qu'il faut entendre par âge minimum au mariage. Dans certains cas, il semble qu'il s'agisse de l'âge au-dessous duquel le mariage est nul sans le consentement des parents ou d'autres personnes autorisées; dans d'autres, ce serait l'âge au-dessous duquel le mariage ne peut pas être valable, même avec le consentement de tous les intéressés. Il faut aussi tenir compte, dans de nombreux cas, du facteur circonstances exceptionnelles. En raison de la diversité des usages en la matière, l'Organisation des Nations Unies a décidé[53] d'étudier s'il n'y aurait pas intérêt à établir des normes internationales fixant un âge minimum pour le mariage. On n'est encore convenu de rien, mais il est probable que l'âge minimum serait voisin de 16 ans pour les filles.

Les réserves qu'implique le code de complétude figurant au tableau 20 et qui valent également pour les données du tableau 21, méritent d'être prises en considération, mais, comme on l'a expliqué plus haut, la signification des codes n'est pas toujours claire pour ce qui est de l'enregistrement des mariages. Quant aux erreurs découlant de l'exploitation des données selon la date de l'enregistrement, elles sont négligeables dans le cas du tableau 21.

Tableau 22

On verra cette année dans le tableau 22 ce qu'ont été les tendances annuelles de la divortialité et des taux bruts de divortialité pendant la période 1950-1959.

Sauf indication contraire, les données représentent les dissolutions de mariage définitives résultant de jugements de divorce rendus à l'intérieur des frontières actuelles des pays énumérés pour la population présente. Il ne s'agit pas du nombre de personnes divorcées, mais du nombre de jugements de divorce prononcés.

Conformément à la pratique habituelle, le symbole (C, U ou . . .) qui figure dans la première colonne du tableau indique la qualité des données; en outre, les données discutables (incomplètes) ou dont le degré d'exactitude n'est pas connu sont reproduites en italique. Voir explications à la page 71.

Portée : Les chiffres annuels publiés dans le tableau 22 concernent 101 pays ou territoires. Les pays importants y sont représentés, même si l'on ne possédait pas de données récentes à leur sujet. Dans les cas où des statistiques sur l'ensemble de la population faisaient défaut, on a publié les données partielles. On a voulu ainsi non seulement fournir des renseignements sur la fréquence des divorces mais aussi montrer quels sont les pays qui établissent des statistiques de la divortialité. Les pays ou territoires où il n'existe pas de dispositions légales sur le divorce sont signalés dans des notes.

Calcul des taux : Les taux du tableau 22 représentent le nombre de jugements de divorce prononcés pour 1 000 personnes présentes sur le territoire au milieu de l'année en question. Dans les quelques cas où l'on ne possédait pas de chiffres pour le milieu de l'année, on a utilisé les résultats du recensement ou une estimation pour une autre date de l'année. Les chiffres de population, qu'ils se rapportent au milieu de l'année ou à toute autre date de l'année, sont les chiffres officiels et, en général, ceux qui figurent dans le tableau 4.

Insuffisances des données : La comparabilité des statistiques de la divortialité est limitée par plusieurs des facteurs mentionnés au sujet des statistiques de l'état civil en général et des statistiques de la divortialité en particulier (voir pages 71 et 73). Il se peut que les divorces comprennent en fait les annulations ou les séparations légales, ou les unes et les autres, selon la méthode de classement et d'exploitation employée. Là où les divorces sont peu nombreux, il n'est probablement pas établi de statistiques distinctes.

Comme les statistiques de la divortialité ont leur source dans les archives et les actes des tribunaux, il est probable que les fluctuations d'une année à l'autre traduiront le rythme plus ou moins rapide auquel les affaires sont jugées plutôt que l'évolution de la fréquence des divorces. En outre, elles montrent dans quelle mesure il est facile ou difficile d'obtenir un divorce, selon le caractère plus ou moins strict de la législation sur les causes de divorce et selon la capacité des intéressés à supporter les frais de procédure. A cet égard, il convient de citer aussi l'influence de certaines religions sur la fréquence des divorces. Pour toutes ces raisons, les statistiques de la divortialité ne sont pas rigoureusement comparables et ne permettent pas de mesurer exactement la fréquence des dissolutions légales de mariages.

L'effet de la complétude des données sur les statistiques de la divortialité dépend pour beaucoup de l'origine de ces données. On trouvera une analyse détaillée

[53] *Documents officiels du Conseil économique et social, vingt-sixième session, Supplément No 1* (E/3169), résolution 680 B (XXVI).

de la question à la page 60 de l'*Annuaire démographique* de 1958.

Les réserves à formuler au sujet des taux de divortialité en tant qu'indices comparables dans le temps et dans l'espace sont les mêmes que celles qui sont applicables à n'importe quel taux brut. La comparabilité des données de base est limitée par les différences qui existent, d'un pays à l'autre, dans les définitions et les concepts utilisés par suite de la diversité des législations dont il a été question plus haut. La diversité des dispositions légales régissant la procédure de divorce et l'hétérogénéité des données sur lesquelles reposent les statistiques de la divortialité contribuent également au défaut de comparabilité. Par exemple, l'inclusion des annulations dans le numérateur a une influence négligeable, mais l'inclusion des séparations légales peut avoir un effet appréciable sur le taux.

Les taux bruts de divortialité — comme les taux bruts correspondants de natalité, de mortalité et de nuptialité — ne sont pas des indices de probabilité. Ils servent plutôt à indiquer l'accroissement brut de la population mariable et la diminution de la population mariée. A ce titre, leur utilité est très grande, même s'ils ne sont pas absolument comparables d'un pays à l'autre. Toutefois, en raison des différences fondamentales qui existent entre les populations du point de vue de la répartition selon l'état matrimonial et de la structure par âge, ils ne mesurent pas le risque de divorce parmi les personnes mariées ou les couples. Ils ne donnent qu'une idée générale de l'évolution de la divortialité et des différences brutes qui existent entre les pays en ce qui concerne la fréquence des divorces par rapport à la population totale, réserve faite, bien entendu, des différences d'acception du terme "divorce" d'un pays à l'autre.

Tableau 23

On trouvera dans le tableau 23 les valeurs de l'espérance de vie ($\mathring{e}_x$), ou nombre moyen d'années restant à vivre, des personnes de sexe masculin et de sexe féminin atteignant les âges indiqués.

Ces valeurs sont extraites de la dernière table de mortalité disponible — complète ou abrégée. Les chiffres sont présentés séparément pour chaque sexe à partir de la naissance (âge 0) et pour les âges suivants: 1, 2, 5, 10, 15, 20, 30, 40, 50, 60, 65 et 70 ans.

Les chiffres ont été reproduits tels qu'ils ont été communiqués par les services officiels, ce qui explique qu'ils comportent tantôt une et tantôt deux décimales.

Portée : Les valeurs figurant dans le tableau 23 se rapportent à 78 pays et territoires. Faute de données de base acceptables, le nombre des pays pour lesquels on a construit des tables de mortalité est réduit, mais on a constaté, ces dernières années, un élargissement notable de la portée géographique. Lorsqu'il était impossible d'obtenir des données de portée nationale, on a indiqué les valeurs concernant différentes subdivisions du territoire, telles que villes ou provinces.

Insuffisances des données : L'exactitude d'une table de mortalité dépend surtout de la complétude de l'enregistrement des décès et de la précision des dénombrements de population par âge effectuées lors du recensement. L'effet de ces facteurs est examiné dans l'*Annuaire démographique* de 1957 (pages 95-96).

Les valeurs de l'espérance de vie présentées dans le tableau 23 ont été calculées à partir des quotients de mortalité de la table de mortalité; toutes les réserves formulées à propos des données de base s'y appliquent donc indirectement. Pour l'interprétation de ces valeurs, il ne faut jamais oublier que, par hypothèse, les groupes de survivants (pour lesquels l'espérance de vie est évaluée) resteront soumis, pour chaque âge, aux conditions de mortalité de la période visée par la table de mortalité et non aux futures conditions de mortalité, quelles qu'elles puissent être. Aussi peut-on dire, à propos de la valeur $\mathring{e}_{50}$ dans la table de mortalité de 1951-1955 relative à la Norvège, que, si les hommes atteignant l'âge de 50 ans restent soumis aux mêmes conditions de mortalité que pendant la période 1951-1955, ils vivront encore en moyenne 26,6 années, c'est-à-dire jusqu'à l'âge de 76,6 ans.

TABLES

TABLEAUX

Italics indicate estimates of questionable reliability.
* Provisional.
x Unofficial estimate.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[3] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.
[4] Non-indigenous population only.
[5] Month unspecified.
[7] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[8] De *jure* count of non-indigenous population only.
[9] For 1958.
[10] For 1 January.
[11] Formerly Belgian Congo; declared independent 30 June 1960.
[12] White population only.
[13] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic) 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[14] Subject to minimum error of ± 0.5 because of lack of significant digits in basic population estimates.
[14a] For 1952-59.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[16] Estimate based on results of 1955 demographic sample survey covering approximately 300 000 persons of both sexes.
[17] For 1956.
[18] Excludes alien armed forces stationed in the area.
[19] For 1954-59.
[20] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[3] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[4] Population non indigène seulement.
[5] Mois non précisé.
[7] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.
[8] Population non indigène de droit dénombrée.
[9] Pour 1958.
[10] Au 1er janvier.
[11] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[12] Population blanche seulement.
[13] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenue, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.
[14] Sous réserve d'une erreur minimum de ± 0,5 car les estimations de population qui ont servi de base ne comprenaient pas suffisament de chiffres significatifs.
[14a] Pour 1952-59.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[16] D'après les résultats de l'enquête démographique par sondage de 1955 qui portait sur environ 300 000 personnes des deux sexes.
[17] Pour 1956.
[18] Non compris les militaires étrangers en garnison sur le territoire.
[19] Pour 1954-59.
[20] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.

Italics indicate estimates of questionable reliability.
Bold face figures in estimates columns indicate that data are census results.
* Provisional.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[8] *De jure* count of non-indigenous population only.
[10] For 1 January.
[13] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic) 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[22] Excludes population of southern part of Northern Zone (former Spanish Protectorate), which was transferred by Spain 10 April 1958.
[23] For 31 August.
[24] Former British dependency; declared independent 1 October 1960.
[25] Indigenous population only.
[26] Note suppressed.
[27] Created 1 July 1960 by the union of former British Somaliland with the former United Nations Trust Territory of Somaliland under Italian administration, which were declared independent 26 June and 1 July 1960, respectively.
[28] For former Italian Somaliland only; census of non-indigenous population of former British Somaliland gave total of 2 683 on 26 April 1931.
[29] Population is *de jure*.
[30] Results of sample census of population covering 1 700 000 persons representing 10 per cent of rural and nomadic population and 100 per cent of that in 68 towns.
[31] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.
[32] Population excludes Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.

Italique: estimations discutables.
Caractère gras : résultats de recensements.
* Données provisoires.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[8] Population non indigène de droit dénombrée.
[10] Au 1er janvier.
[13] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenue, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[22] Non compris la population de la partie sud de la zone nord (ancien Protectorat espagnol) dont la cession au Maroc a été décidée le 10 avril 1958.
[23] Au 31 août.
[24] Ancienne possession britannique proclamée indépendante le 1er octobre 1960.
[25] Population indigène seulement.
[26] Note supprimée.
[27] Créée le 1er juillet 1960, par la réunion de l'ancienne Somalie britannique et de l'ancien Territoire sous tutelle de la Somalie sous administration italienne qui ont été proclamés indépendants le 26 juin et le 1er juillet 1960 respectivement.
[28] Ancienne Somalie italienne seulement; le recensement de la population non indigène de l'ancienne Somalie britannique a donné un chiffre de 2 683 au 26 avril 1931.
[29] Population de droit.
[30] Résultats d'un recensement par sondage ayant porté sur 10 pour cent de la population rurale et nomade et 100 pour cent de celle de 68 villes, soit 1 700 000 personnes au total.
[31] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.
[32] Non compris les réfugiés algériens temporairement dans le pays, au nombre de 180 000 en 1959 (estimation).

[x] Unofficial estimate.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[8] De *jure* count of non-indigenous population only.
[13] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic) 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[21] Population estimated at 60 in 1953 and 102 in 1959.
[33] Excluding data for Walvis Bay, which is an integral part of the Union but is administered as if it were part of South West Africa (area, 969 km²; population 3 329 in 1951).
[34] Excludes nomad population in Egypt, numbering 55 073 at 1947 census, and Palestinian refugees in Syria, numbering 98 474 on 31 December 1953 and 119 648 on 1 July 1959.
[35] Inhabited and cultivated territory accounts for 219 294 km² in the Republic and 34 815 km² in Egypt; corresponding densities are 136 and 729 respectively.
[37] High rate due to inclusion in 1959 estimate of an allowance for unregistered persons.
[38] Including data for the two Departments of the Sahara.
(42 917 for both sexes), personnel in military establishments (53 374 for both
[39] De *jure* population actually enumerated but excluding persons in institutions (42 917 for both sexes), personnel in military establishments (53 374 for both sexes), merchant seamen (872), armed forces and diplomatic personnel stationed outside country, and some of the Moslem workers in France.
[40] Comprising the islands of St. Paul and Amsterdam, the Kerguelen and Crozet Archipelagos and Adelie Coast, all former dependencies of Madagascar.
[41] Overseas Department of France.
[42] Overseas Province of Portugal.
[45] Rate not computed for population under 50 000 because of magnitude of chance variation.

Italique: estimations discutables.
* Données provisoires.
[x] Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[8] Population non indigène de droit dénombrée.
[13] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenue, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[21] Population estimée à 60 habitants en 1953 et 102 en 1959.
[33] Non compris Walvis Bay, ville qui fait partie intégrante de l'Union sud-africaine, mais qui est administrée comme si elle relevait du Sud-Ouest africain (superficie: 969 km²; 3 329 habitants en 1951).
[34] Non compris les nomades d'Egypte (55 073 au recensement de 1947) ni les réfugiés de Palestine en Syrie (98 474 au 31 décembre 1953 et 119 648 au 1er juillet 1959).
[35] La superficie habitée et cultivée est de 219 294 km² pour la République et de 34 815 km² pour l'Egypte; les densités correspondantes sont respectivement 136 et 729.
[37] Ce taux élevé s'explique par l'inclusion dans le chiffre de 1959, d'une estimation des personnes non enregistrées.
[38] Y compris les données pour les 2 départements du Sahara.
[39] Population de droit effectivement dénombrée, mais non compris la population des collectivités (42 917 personnes des deux sexes), militaires dans les établissements militaires (53 374 personnes des deux sexes), les équipages de la marine marchande (872 personnes), les militaires et le personnel diplomatique en poste en dehors du territoire, et un certain nombre d'ouvriers musulmans travaillant en France.
[40] Iles Saint-Paul et Nouvelle-Amsterdam; archipels de Kerguélen et Crozet et Terre Adélie, auparavant dépendances de Madagascar.
[41] Département français d'outre-mer. [42] Province d'outre-mer du Portugal.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.

[46] Comprising Alhucemas, Chafarinas and Peñón de Vélez de la Gomera.
[47] Formerly known as Spanish Guinea.
[47a] Comprising the islands of Fernando Póo and Annobon.
[47b] Comprising continental Guinea and the Islands of Corisco and Elobeys.
[48] Population includes nomads (estimated at 20 000 for both sexes in 1946), the population of the headquarters of administration located at Mafeking in the Union of South Africa, and other civilian nationals working outside Territory, numbering 282 and 14 119 respectively at 1946 census.
[49] For Colony only.
[50] Includes allowance for seasonal immigrants ("strange farmers"), estimated at 11 372 in 1953 and 5 757 in 1959.

Italique: estimations discutables.
[x] Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[42] Province d'outre-mer du Portugal.
[43] Selon le recensement de la population civilisée effectué en 1955, le total était de 117 405 personnes (dont 63 991 du sexe masculin et 53 414 du sexe féminin).
[44] Province africaine de l'Espagne.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[46] Alhucemas, Chafarinas et Peñon de Velez de la Gomera.
[47] Ancienne Guinée espagnole.
[47a] Comprend les îles Fernando Póo et Annobon.
[47b] Comprend la Guinée continentale et les îles Corisco et Elobeys.
[48] Y compris la population nomade (estimée à 20 000 personnes des deux sexes en 1946) ainsi que le personnel des services administratifs centraux de Mafeking (Union sud-africaine) et les autres civils nationaux travaillant hors du territoire, soit respectivement 282 et 14 119 personnes au recensement de 1946.
[49] Colonie seulement.
[50] Y compris les immigrants saisonniers (travailleurs venant d'autres régions—*strange farmers*) au nombre de 11 372 en 1953 et de 5 757 en 1959 (estimations).

[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[9] For 1958.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[45] Rate not computed for populations under 50 000 because of magnitude of chance variation.
[51] Population excludes non-African armed forces and, at the time of census, persons in transit and Polish refugees in camps, numbering respectively 4 137 and 188.
[52] Includes an estimate of 219 000 for both sexes for population of Northern Frontier Provinces and parts of Rift Valley only partially covered by census.
[53] Excluding data for dependencies, shown separately hereunder.
[54] Comprising Diego García, Peros Banhos, Agalega, Salomon and St. Brandon Islands.
[55] Non-indigenous population plus "Africans in employment", i.e., native employees of the European money economy.
[56] Non-indigenous population of 71 760 plus "Africans in employment" (cf. [55]). Sample of indigenous African population surveyed 30 June 1950 gave *de facto* estimate of 1 816 000; corresponding *de jure* estimate was 1 837 000, of which 895 000 males, and 942 000 females.
[57] Non-indigenous population of 16 435 plus "Africans in employment" (cf. [55]). Census of indigenous population March-July 1945 gave *de jure* total of 2 178 013, of which 1 071 147 males and 1 106 866 females.
[58] Non-indigenous population of 190 330, of which 98 399 males and 91 931 females, plus "Africans in employment" (cf. [55]). Sample of indigenous African population surveyed in 1953-1955 gave *de facto* estimate of 1 477 000, of which 658 000 males and 819 000 females; corresponding *de jure* estimate was 2 047 000 of which 1 023 000 males and 1 024 000 females.
[59] Population estimated at 168 in 1953 and 326 in 1959.
[60] Population estimated at 285 in 1953 and 284 in 1958.
[61] Comprising Gough, Inaccessible and Nightingale Islands, of which only Gough is inhabited.

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[9] Pour 1958.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[51] Non compris les militaires non africains, ni les voyageurs de passage et les réfugiés polonais dans des camps au moment du recensement, soit respectivement 4 137 et 188 personnes.
[52] Y compris 219 000 personnes des deux sexes (estimation) dans les provinces frontalières du nord et une partie de la vallée du Rift territoires qui n'ont été que partiellement recensés.
[53] Non compris les dépendances, qui font l'objet de rubriques distinctes (voir plus bas sous cette rubrique).
[54] Diego Garcia, Peros Banhos, Agalega, Salomon et Saint-Brandon.
[55] Population non indigène et "Africains occupant un emploi", c'est-à-dire indigènes travaillant dans le secteur monétaire européen de l'économie.
[56] Population non indigène (71 760 personnes et "Africains occupant un emploi" (cf. [55]). Le sondage de la population indigène de fait effectué le 30 juin 1950 a donné un total de 1 816 000 personnes. La population de droit correspondante était estimée à 1 837 000 personnes (dont 895 000 du sexe masculin et 942 000 du sexe féminin).
[57] Population non indigène (16 435 personnes) et "Africains occupant un emploi" (cf. [55]). Le recensement de la population indigène de droit effectué de mars à juillet 1945 a donné un total de 2 178 013 personnes (1 071 147 du sexe masculin et 1 106 866 du sexe féminin).
[58] Population non indigène (190 330 personnes dont 98 399 du sexe masculin et 91 931 du sexe féminin) et "Africains occupant un emploi" (cf. [55]). Le sondage de la population indigène de fait (enquête effectuée en 1953-1955) a donné un total de 1 477 000 personnes (dont 658 000 du sexe masculin et 819 000 du sexe féminin). La population de droit correspondante était estimée à 2 047 000 personnes (1 023 000 du sexe masculin et 1 024 000 du sexe féminin).
[59] Population estimée à 168 habitants en 1953 et 326 en 1959.
[60] Population estimée à 285 habitants en 1953 et 284 en 1958.
[61] Gough, Inaccessible et Nightingale, l'île de Gough étant seule habitée.

Italics indicate estimates of questionable reliability.
* Provisional.
x Unofficial estimate.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[45] Rate not computed for populations under 50 000 because of magnitude of chance variation.
[81] Population excludes tourists and members of United Kingdom and United States armed forces and their dependants stationed in the area.
[82] See Antigua, Montserrat, St. Kitts-Nevis and Anguilla, under "West Indies", and Virgin Islands [UK].
[83] Comprising 36 islands, of which 11 are inhabited, the largest being Tortola (52 km²), Virgin Gorda (34 km²), Anegada (28 km²) and Jost Van Dyke (18 km²).
[84] Former dependency of Jamaica which, on 4 July 1959, received a new constitution providing for its separate government.
[85] Including data for Carriacou and other dependencies in the Grenadines.
[86] Including data for Bequia and other dependencies in the Grenadines.
[87] See Dominica, Grenada, St. Lucia and St. Vincent under "West Indies".
[88] Population is *de jure*, but includes armed forces stationed in the area.
[89] Excludes inland waters.

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[81] Non compris les touristes, ni les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leur famille.
[82] Voir Antigua, Montserrat, Saint-Christophe-Nevis et Anguilla sous "Indes occidentales" et îles Vierges [RU].
[83] 36 îles dont 11 sont inhabitées, les plus grandes étant Tortola (52 km²), Virgin Gorda (34 km²), Anegada (28 km²) et Jost Van Dyke (18 km²).
[84] Ancienne dépendance de la Jamaïque qui a été dotée le 4 juillet 1959 d'une nouvelle constitution lui octroyant une administration distincte.
[85] Y compris Carriacou et autres dépendances du groupe des îles Grenadines.
[86] Y compris Bequia et autres dépendances du groupe des îles Grenadines.
[87] Voir Dominique, Grenade, Sainte-Lucie et Saint-Vincent sous "Indes occidentales".
[88] Population de droit, mais y compris les militaires en garnison sur le territoire.
[89] Non compris les eaux intérieures.

Italics indicate estimates of questionable reliability.
Bold face figures in estimates columns indicate that data are census results.
* Provisional.
x Unofficial estimate.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[6] For 1953-58.
[9] For 1958.
[14] Subject to minimum error of ± 0.5 because of lack of significant digits in basic population estimates.
[36] Except for 1953, population data exclude alien armed forces, merchant seamen and foreign diplomatic personnel.
[45] Rate not computed for populations under 50 000 because of magnitude of chance variation.
[104] Excluding data for dependencies, of which South Georgia (area 3 755 km²) had an estimated 1955 population of 1 329 (1 321 males and 8 females) and the rest, 60 males and no females.
[105] *De jure* population in 252 towns only, approximating the urban area of the Union; these are the results of the first stage of a multi-stage sample census. In the second stage enumeration carried out 1 February 1954, an additional 2 908 001 persons were enumerated in 3 159 village tracts, 2 143 of which were in Burma proper and 1 016 in Kachin state. The last regular census of Burma was in 1941.
[106] Estimated from results of a demographic sample survey covering 345 villages, and supplementary administrative reports.
[107] Population excludes non-resident military and shipping personnel.
[108] Population actually enumerated; total, including 0.7 per cent adjustment for underenumeration, is 8 154 580 for both sexes.
[109] Population registered, plus estimate of 8 397 477 for persons living in outlying areas where local registration offices were not established. No adjustment has been made for 0.1 per cent estimated net underenumeration. Published by *Hsin Hua Monthly*.
[110] For 1958; mean of end-year estimates published by Ministry of Health, Peking, 1959, and the New China News Agency, 4 February 1959.
[111] Comprising islands of Taiwan and Pescadores.
[112] Includes population of Quemoy and Matsu Islands.
[113] Excludes armed forces and foreigners.

Italique: estimations discutables.
Caractère gras: résultats de recensements.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[6] Pour 1953-58.
[9] Pour 1958.
[14] Sous réserve d'une erreur minimum de ± 0,5, car les estimations de population qui ont servi de base ne comprenaient pas suffisamment de chiffres significatifs.
[36] Sauf pour 1953, les données excluent les membres de forces armées étrangères, de la marine marchande et du corps diplomatique.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[104] Non compris les dépendances, parmi lesquelles figure la Géorgie du Sud (3 755 km²) avec une population estimée à 1 329 personnes en 1955 (1 321 du sexe masculin et 8 du sexe féminin), les autres dépendances étant peuplées de 60 hommes au total à l'exclusion de femmes.
[105] Population de droit de 252 villes seulement, représentant la presque totalité des zones urbaines de l'Union; résultats obtenus sur l'échantillon du premier degré d'un recensement par sondage à plusieurs degrés. Au cours des opérations du deuxième degré, effectuées le 1er février 1954, on a dénombré 2 908 001 autres personnes dans 3 159 zones de villages dont 2 143 en Birmanie proprement dite et 1 016 dans l'Etat de Kachin. En Birmanie, le dernier recensement régulier a eu lieu en 1941.
[106] D'après les résultats d'une enquête démographique par sondage dans 345 villages et les données des rapports administratifs complémentaires.
[107] Non compris les militaires et les agents des compagnies de transports maritimes non résidents.
[108] Population effectivement dénombrée; après ajustement de 0,7 pour cent pour compenser les lacunes du dénombrement, le total pour les deux sexes est de 8 154 580 habitants.
[109] Population enregistrée, augmentée d'une estimation (8 397 477 personnes) pour les régions périphériques où il n'existait pas de bureaux locaux d'enregistrement, mais compte non tenu d'un ajustement de 0,1 pour cent destiné à compenser les lacunes du dénombrement. Source: *Hsin Hua Monthly*.
[110] Pour 1958, moyenne des estimations de fin d'année publiées par le Ministère de la santé (Pékin, 1959) et la New China Agency (4 février 1959).
[111] Taïwan et les Pescadores.
[112] Y compris la population des îles Quemoy et Matsu.
[113] Non compris les militaires ni les étrangers.

[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[114] Former British dependency; declared independent 16 August 1960.
[115] Population excludes armed forces.
[116] Registered adult population, plus estimate of 163 323 for children under 12 years of age, 3 835 for police forces and 1 200 for visitors and detainees.
[117] Comprising Perak, Selangor, Negri Sembilan and Pahang (the former Federated Malay States), Kedah, Perlis, Kelantan, Trengganu and Johore (the former Unfederated Malay States), and Penang with Province Wellesley and Malacca (the former Colony of the Straits Settlements). Population excludes transients afloat.
[118] Excludes service personnel in service establishments.
[119] Including Andaman, Nicobar, Laccadive, Minicoy and Aminidivi Islands. Also including data for Kashmir-Jammu, the final status of which has not yet been determined (population estimated at 4 410 000 in 1951; area, 222 380 km²).
[120] Includes an estimate of 1 580 000 for Manipur, North East Frontier Agency, Nagaland and Sikkim.
[121] Includes population of Sikkim.
[122] Note suppressed.
[123] Note suppressed.
[124] Includes nationals abroad. Population actually enumerated; total, including adjustment of 221 066 for underenumeration (of which 124 632 males, 96 434 females), is 6 538 109 for both sexes.
[125] Jewish population only.
[126] Comprising Hokkaido, Honshu, Shikoku, Kyushu, the Amami Islands, and the Tokara Archipelago.
[127] Population excludes Allied military and civilian personnel and their dependants stationed in the area.
[128] Note suppressed.
[129] Including West Jordan, that part of Arab Palestine annexed 25 April 1950. Population excludes military personnel and their dependants living in military installations, and foreigners, except registered Palestinian refugees (numbering 475 620 in June 1953 and 595 725 at 30 June 1959) who are included.
[130] Results of a census of housing which included a count of persons, by sex. A census of population has never been taken in Jordan.

Italique: estimations discutables.
* Données provisoires.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[114] Ancienne possession britannique proclamée indépendante le 16 août 1960.
[115] Non compris les militaires.
[116] Adultes enregistrés, plus 163 323 enfants de moins de 12 ans (estimation), 3 835 policiers et 1 200 visiteurs et détenus.
[117] Perak, Selangor, Negri Sembilan et Pahong (anciens Etats malais fédérés), Kedah, Perlis, Kelantan, Trengganu et Johore (anciens Etats malais non fédérés) et Penang avec la province de Wellesley et Malacca (ancienne colonie des Etablissements des détroits). Non compris les personnes de passage à bord de navires.
[118] Non compris les militaires encasernés.
[119] Y compris Andaman, Nicobar, îles Laquedives, Minicoï et Aminidivi. Y compris également le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé (population estimée à 4 410 000 habitants en 1951; superficie : 222 380 km²).
[120] Y compris une estimation de 1 580 000 pour le Manipur, l'Agence de la frontière du Nord-Est, Nagaland et Sikkim.
[121] Y compris le Sikkim.
[122] Note supprimée.
[123] Note supprimée.
[124] Y compris les nationaux à l'étranger. Population effectivement dénombrée; le total, après ajustement de 221 066 unités pour compenser les lacunes du dénombrement (124 632 pour le sexe masculin et 96 434 pour le sexe féminin), s'établit à 6 538 109 pour les deux sexes.
[125] Population juive seulement.
[126] Hokkaïdo, Honshu, Shikoku, Kyu-shu, les îles Amami et l'archipel des Tokara.
[127] Non compris les militaires et les civils alliés en poste sur le territoire ni les membres de leurs familles les accompagnant.
[128] Note supprimée.
[129] Y compris la partie occidentale de la Jordanie, c'est-à-dire la partie de la Palestine arabe annexée le 25 avril 1950. Non compris les étrangers, les militaires et leurs familles vivant dans des installations militaires, mais y compris les réfugiés de Palestine immatriculés au nombre de 475 620 en juin 1953 et de 595 725 au 30 juin 1959).
[130] D'après les résultats d'un recensement de l'habitation au cours duquel les habitants ont été dénombrés par sexe. Aucun recensement de population n'a jamais eu lieu en Jordanie.

[151] Population excludes transients afloat and non-locally domiciled military and civilian services personnel and their dependants, numbering 3 466 and 27 299, respectively, at 1957 census.
[152] Comprising that part of Palestine under Egyptian administration following the Armistice of 1949.
[153] Comprising Parry, Beechey, Bailey, Volcano and Marcus Islands.
[154] Population numbered 154 in 1953 and 206 in 1959.
[155] Comprising those islands of the Ryukyu group south of the 29th degree of North latitude, except the Tokara Archipelago and Amami Islands, which reverted to Japan on 5 December 1951 and 25 December 1953 respectively.

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[115] Non compris les militaires.
[127] Non compris les militaires et les civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant.
[147] La Colonie d'Aden et Périm ainsi que le Protectorat (partie occidentale et partie orientale) et ses dépendances; île de Kamaran, îles de Kuria Muria et Socotra.
[148] Non compris Périm, l'île de Kamaran, les îles de Kuria Muria; il est tenu compte du personnel du port d'Aden et des militaires.
[149] Compte non tenu des bulletins qui n'ont pas été classés par sexe, soit 1 775 bulletins pour les deux sexes.
[150] Ile de Hong-Kong, Kowloon et les Nouveaux Territoires (à bail).
[151] Non compris les personnes de passage à bord des navires, ni les militaires et agents civils domiciliés en dehors du territoire et les membres de leurs familles les accompagnant, soit respectivement 3 466 et 27 299 personnes lors du recensement de 1957.
[152] Partie de la Palestine administrée par l'Egypte à la suite de l'armistice de 1949.
[153] Iles Parry, Beechey, Bailey, Volcan et Marcus.
[154] 1953 : 1954 habitants; 1959 : 206 habitants.
[155] Iles du groupe des Ryû-Kyû situées au sud du 29ème parallèle (latitude nord), à l'exclusion de l'archipel des Tokara et des îles Amami, rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.

Italics indicate estimates of questionable reliability.
* Provisional.
x Unofficial estimate.
[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[29] Population is *de jure*.
[45] Rate not computed for populations under 50 000 because of magnitude of chance variation.
[156] Excludes area of frontier rivers.
[157] Excluding Faeroe Island and the overseas Department of Greenland shown separately.
[158] Based on 17 per cent sample of census returns.
[159] Includes Finnish nationals temporarily outside country.
[160] Metropolitan (continental) France only.
[161] Excludes alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country and career military service outside country except those on duty in Germany or Austria. Includes civilian residents temporarily outside country, military conscripts wherever stationed and all personnel on duty in Germany or Austria and their dependants, the last three estimated at 196 500 in 1954.
[162] Results of a census of housing which enumerated individuals separately. Last regular census, on 13 September 1950, gave for the Federal Republic of Germany, excluding Saar, a total of 47 695 672, of which 22 350 692 males and 25 344 980 females, and for West Berlin a total of 2 146 952 of which 911 504 males and 1 235 448 females.
[163] Based on estimates of 1 January rather than midyear because latter is atypical in 1953.
[164] Includes armed forces stationed outside country but excludes alien armed forces stationed in the area.
[165] Area is 0.44 km².
[166] Land area only; total area up to low-waterline (sea-level at low tide) is 40 893 km².

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[29] Population de droit.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[156] Non compris la surface des cours d'eau frontières.
[157] Non compris les îles Féroé et le département d'outre-mer du Groenland qui font l'objet de rubriques distinctes.
[158] D'après un échantillon de 17 pour cent des bulletins de recensement.
[159] Y compris les nationaux finlandais temporairement hors du pays.
[160] France métropolitaine (continentale) seulement.
[161] Non compris les militaires et le personnel diplomatique étranger dans le pays, le personnel diplomatique français en poste à l'étranger et les militaires de carrière, hors du pays, à l'exception de ceux des troupes d'occupation en Allemagne et en Autriche. Y compris les résidents civils temporairement hors du pays, les militaires du contingent où qu'ils se trouvent ainsi que tous les civils et militaires en occupation en Allemagne et en Autriche avec les membres de leurs familles les accompagnant, soit au total 196 500 personnes en 1954.
[162] D'après les résultats d'un recensement de l'habitation au cours duquel il a été procédé à un dénombrement de la population; selon le dernier recensement de population régulier (13 septembre 1950), la population de la République fédérale d'Allemagne, non compris la Sarre, était de 47 695 672 personnes dont 22 350 692 du sexe masculin et 25 344 980 du sexe féminin; pour Berlin-Ouest, le total s'établissait à 2 146 952 personnes dont 911 504 du sexe masculin et 1 235 448 du sexe féminin.
[163] D'après des estimations établies pour le 1er janvier et non pour le milieu de l'année, car dans ce dernier cas les données n'auraient pas été représentatives pour 1953.
[164] Y compris les militaires nationaux hors du pays, mais non compris les militaires étrangers en garnison sur le territoire.
[165] Superficie: 0,44 km².
[166] Superficie terrestre seulement; la superficie totale découverte à marée basse (laisse de basse mer) est de 40 893 km².

[29] Population de droit.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[115] Non compris les militaires.
[175] Non compris les personnes logées à bord de navires du port, au nombre de 479 pour les deux sexes.
[176] Y compris l'île Comino. Non compris les militaires non maltais en garnison sur le territoire. Y compris, pour 1957 et 1959, les civils nationaux temporairement hors du territoire.
[177] Non compris les aborigènes purs, au nombre de 39 319 en juin 1954 (estimation), ni les militaires hors du territoire (48 106 en mai 1959).
[178] Y compris les îles Campbell et Kermadec (148 km², avec une population de 18 habitants au recensement de 1956) ainsi que les îles Antipodes, Auckland, Bounty, Snares, Solander et Three Kings qui sont toutes inhabitées. Il n'est pas tenu compte des militaires hors du pays, au nombre de 2 162 lors du recensement de 1956.
[179] Non compris les personnes de passage à bord de navires ni les militaires encasernés.
[180] C'est-à-dire les îles Australes, Gambier, Marquises, Rapa, de la Société et Touamotou.
[181] Y compris les dépendances: îles Wallis, Futuna, Huon et Chesterfield.

[1] For explanation of code, see p. 19.
[2] Population per square kilometre of area in 1959.
[4] Non-indigenous population only.
[15] Not revised to accord with 1960/61 census result, shown adjacent.
[45] Rate not computed for populations under 50 000 because of magnitude of chance variation.
[182] Comprising the Solomon Islands group (except Bougainville and Buka, which are included with the Trust Territory of New Guinea below), Ontong Java, Rennel and Santa Cruz Islands.
[183] Including also data for Christmas, Fanning, Ocean, Washington Islands and the Phoenix Islands group except Canton and Enderbury Islands which are shown separately below.
[184] Includes population of Canton and Enderbury Islands.
[185] Population estimated at approximately 130 in 1953 and 146 at the end of 1959.
[186] Includes United States military personnel, their dependants and contract employees.
[187] Excludes United States military personnel, their dependants and contract employees.
[188] Comprising Northeast New Guinea, the Bismarck Archipelago, Bougainville, Buka (the latter two of the Solomon Islands group) and about 600 smaller islands.
[189] Land area only; total, including ocean area within administrative boundaries, is approximately 2 589 998 km².

Italique: estimations discutables.
* Données provisoires.
x Estimation non officielle.
[1] Pour l'explication du code, voir p. 66.
[2] Habitants par km² en 1959.
[4] Population non indigène seulement.
[15] Non aligné sur les résultats du recensement de 1960/61, indiqués dans une colonne voisine.
[45] Il n'a pas été calculé de taux pour les populations de moins de 50 000 habitants en raison de l'importance des variations accidentelles.
[182] Groupe des îles Salomon (à l'exception de Bougainville et de Buka dont la population est comprise plus bas dans celle du Territoire sous tutelle de la Nouvelle-Guinée) ainsi que les îles Ontong Java, Rennell et Santa Cruz.
[183] Y compris les îles Christmas, Fanning, Océan et Washington, ainsi que le groupe des îles Phoenix sauf les îles Canton et Enderbury qui font l'objet d'une rubrique distincte (voir plus bas).
[184] Y compris les îles Canton et Enderbury.
[185] 1953: 130 habitants; fin 1959: 146 habitants (estimations).
[186] Y compris les militaires des Etats-Unis, les membres de leurs familles et les agents contractuels des Etats-Unis.
[187] Non compris les militaires des Etats-Unis et les membres de leurs familles ni les agents contractuels des Etats-Unis.
[188] Le nord-est de la Nouvelle-Guinée, l'archipel Bismarck, Bougainville et Buka (ces deux dernières du groupe des Salomon) et environ 600 îlots.
[189] Superficie terrestre seulement; la superficie totale, qui comprend la zone maritime se trouvant à l'intérieur des frontières administratives, est de 2 589 998 km² environ.

[1] Comprising land area and inland waters, but excluding uninhabited polar regions and some uninhabited islands.
[2] Adjusted for underenumeration and errors in estimation.
[3] Population per square kilometre of area.
[4] Syria, though a province of the United Arab Republic, is included in Asia.
[5] Hawaii, though a state of the United States of America, is included in Oceania.
[6] Rate reflects combined effects of natural increase and migration.
[7] Weighted average of recorded rates.
[8] Excluding the Union of Soviet Socialist Republics shown separately below. Including Syria and Asiatic Turkey.
[9] Excluding the Union of Soviet Socialist Republics shown separately below. Including European Turkey.

[1] Superficie des terres et des eaux intérieures, non compris les zones polaires ni quelques îles inhabitées.
[2] Chiffres ajustés pour tenir compte les lacunes de certains dénombrements et des erreurs d'estimation.
[3] Nombre d'habitants par kilomètre carré.
[4] La Syrie, bien que province de la République arabe unie, est rattachée à l'Asie.
[5] Hawaï, bien qu'Etat des Etats-Unis d'Amérique, est rattaché à l'Océanie.
[6] Taux correspondant aux effets combinés de l'accroissement naturel et de la migration.
[7] Moyenne pondérée de taux calculés à partir des données d'enregistrement.
[8] Non compris l'Union des Républiques socialistes soviétiques qui fait l'objet d'une rubrique distincte (voir plus bas). Y compris la Syrie et la Turquie d'Asie.
[9] Non compris l'Union des Républiques socialistes soviétiques qui fait l'objet d'une rubrique distincte (voir plus bas). Y compris la Turquie d'Europe.

3. Vital statistics rates : selected countries, latest available year
Taux du mouvement de la population : quelques pays, dernière année pour laquelle on possède des données

[Areas and populations included are those reporting "complete" registration of current births and deaths or a reliable estimate of the crude rates; for definition of "completeness", see page 23. Italics indicate that data are unreliable or of unknown completeness. Crude marriage, divorce, birth, death and natural increase rates are computed per 1 000 population; infant mortality rates are per 1 000 live births and fertility rates per 1 000 female population aged 10-49 years. Expectation of life is the average number of years of life remaining at birth. For detailed explanations, see text and Tables 13, 15, 16, 20, 22 and 23; for limitations, see discussion, page 29. — Les unités géographiques et les populations retenues sont celles où l'enregistrement des naissances et des décès est "complet" ou pour lesquelles il existe une bonne estimation des taux bruts; pour les normes de "complétude", voir page 71. (Les données discutables ou dont le degré de complétude n'est pas connu sont reproduites en italique.) Les taux bruts de nuptialité, de divortialité, de natalité, de mortalité et d'accroissement naturel sont calculés pour 1 000 habitants; les taux de mortalité infantile sont calculés pour 1 000 naissances vivantes et les taux de fécondité pour 1 000 femmes âgées de 10 à 49 ans. L'espérance de vie représente le nombre moyen d'années restant à vivre à la naissance. Pour plus de détails, voir les tableaux 13, 15, 16, 20, 22 et 23, ainsi que les notes techniques s'y rapportant; les insuffisances des données sont exposées à la page 77.]

[1] For 1950.
[2] Formerly Belgian Congo; declared independent 30 June 1960.
[3] Data are estimates based on results of demographic sample survey of about 3.6 per cent of indigenous population.
[4] Data are for a compulsory registration area of 36 towns and townships which comprises about 12 per cent of total population and is not representative of Ghana.
[5] Data are estimates, based on results of 1955 demographic sample survey of residents.
[6] Rate computed on female population aged 14-49 years.
[7] For rural population only; corresponding data for urban population are 190 for infant mortality and 35.8 years for life expectancy.
[8] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and declared independent on 7 August 1960.
[9] Data are estimates for rural population, based on results of 1957-58 demographic sample survey in 69 villages.
[10] For 1952.
[11] Estimated rate, basis unknown.
[12] For 1956.
[13] For 1958.
[14] For 1951.
[15] Data are estimates, based on results of demographic sample survey of African population.

[1] Pour 1950.
[2] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[3] Estimations établies à partir des résultats de l'enquête par sondage démographique qui a porté sur environ 3,6 pour cent de la population indigène.
[4] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative de l'ensemble du Ghana.
[5] Estimations établies à partir des résultats de l'enquête démographique par sondage de 1955 sur les résidants.
[6] Taux calculé sur la base de l'effectif de la population féminine âgée de 14 à 49 ans.
[7] Ne concerne que la population rurale; pour les zones urbaines, le taux de mortalité infantile et l'espérance de vie s'établissent respectivement à 190 et à 35,8.
[8] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 7 août 1960.
[9] Estimations pour la population rurale établies à partir des résultats de l'enquête démographique par sondage de 1957-1958 qui a porté sur 69 villages.
[10] Pour 1952.
[11] Taux estimatif; base inconnue.
[12] Pour 1956.
[13] Pour 1958.
[14] Pour 1951.
[15] Estimations établies à partir des résultats d'une enquête démographique par sondage sur la population africaine.

[27] There is no legal provision for "divorce" in sense used here.
[35] Data are estimates, based on demographic analysis of population census returns.
[36] Data are estimates based on 6.2 per cent sample of population of 1 700 villages.
[37] Estimated rate, based on demographic analysis of results of 1947 population census and 1956 Demographic and Economic Survey of Thailand.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
** Taux calculés à partir de fréquences inférieures à 15.
[1] Pour 1950.
[12] Pour 1956.
[13] Pour 1958.
[14] Pour 1951.
[20] Pour 1953.
[22] Pour 1959.
[26] Pour 1957.
[27] Il n'existe pas de dispositions législatives touchant le "divorce" au sens où on l'entend ici.
[35] Estimations établies à partir des résultats d'une analyse démographique du recensement de la population.
[36] Taux estimatifs, d'après un échantillon représentant 6,2 pour cent de la population de 1 700 villages.
[37] Taux estimatifs, d'après une analyse démographique des résultats du recensement de la population de 1947 et de l'enquête thaïlandaise démographique et économique de 1956.

3. Vital statistics rates (continued)—Taux du mouvement de la population (suite)

[See note at head of table. — Voir note au début du tableau.]

Continent and country Continent et pays	Year Année	Marriage Nuptialité	Divorce Divorti-alité	Birth Natalité		Death Mortalité		Natural rate of increase Accroisse-ment naturel	Expectation of life at birth Espérance de vie à la naissance

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.

[1] *De jure* population.
[2] Excludes persons in institutions.
[3] Beginning 1946, includes nomad population estimated at 20 000 in 1946, the population of the headquarters of administration located at Mafeking in the Union of South Africa, and other civilian nationals working outside Territory numbering 282 and 14 119 respectively at 1946 census.
[4] Formerly Cameroons, a United Nations Trust Territory under French administration which became independent 1 January 1960.
[5] Estimates are for 31 December.
[6] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[7] Formerly Belgian Congo; declared independent 30 June 1960.
[8] Prior to 1951, excluding Asiatic and Coloured (mixed) population.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.

[1] Population de droit.
[2] Non compris la population des collectivités.
[3] A partir de 1946, y compris la population nomade (estimée à 20 000 personnes en 1946), la population du centre administratif de Mafeking (Union sud-africaine) et les autres civils nationaux travaillant hors du territoire, soit respectivement 282 et 14 119 personnes au recensement de 1946.
[4] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[5] Estimations au 31 décembre.
[6] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale français est devenu en 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant aux dates ci-après: République centrafricaine (anciennement Oubangui-Chari), 13 août; Tchad, 11 août; Congo (anciennement Moyen Congo), 15 août; Gabon, 17 août.
[7] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[8] Pour les années antérieures à 1951, non compris les personnes d'origine asiatique et les personnes de couleur (métis).

4. Estimations de la population au milieu de l'année : 1920-1960

[Sauf indication contraire, estimations officielles au 1er juillet ou moyennes d'estimations officielles de fin d'année. Les chiffres en caractères gras proviennent de recensements; pour les dates de dénombrement, voir tableau 6. Les chiffres en italique sont des estimations discutables, dont la qualité est déterminée par la méthode qui a servi à les établir; pour les éléments entrant en ligne de compte dans les estimations de 1959, se reporter au tableau 1. Voir explications à la page 74.]

[9] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[13] Prior to 1946, excluding seasonal immigrants ("strange farmers"), numbering, for 1946-1958: 13 263, 14 662, 10 863, 10 981, 16 512, 15 042, 19 720, 11 372, 12 303, 9 648, 9 218, 10 286 and 9 015, respectively.

[14] For 1940-1949, excluding non-African armed forces.

[15] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

[16] Prior to 1956, excluding population of southern part of Northern Zone (former Spanish Protectorate).

[21] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development, as measured by educational level, language and mode of living.

[22] Former British dependency; declared independent 1 October 1960.

[9] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu en 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après: Dahomey, le 1er août; Côte d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; le Sénégal, le 20 juin; Haute-Volta, le 5 août.

[13] Pour les années antérieures à 1946; non compris les émigrants saisonniers (travailleurs agricoles venant d'autres régions—Strange farmers) dont le nombre, pour les années 1946-1957, s'établit comme suit: 13 263; 14 662; 10 863; 10 981; 16 512; 15 042; 19 720; 11 372; 12 303; 9 648; 9 218; 10 286 et 9 015 respectivement.

[14] Pour 1940-1949, non compris les militaires non africains.

[15] Aussi connu sous le nom de République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la communauté française et a été proclamé indépendant le 25 juin 1960.

[16] Pour les années antérieures à 1956, non compris la partie sud de la zone du Nord (ancien protectorat espagnol).

[21] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.

[22] Ancienne possession britannique; proclamée indépendante le 1er octobre 1960.

4. Estimates of midyear population : 1920-1960

[Unless otherwise indicated, official estimates of population for 1 July, or average of end-year estimates. Figures shown in bold face are census results; for date of enumeration, see Table 6. Figures shown in italics are estimates of questionable reliability, evaluated according to method of their construction; for components of 1959 estimates, see Table 1. For discussion, see page 26.]

* Provisional.
× Unofficial estimate.
§ Estimates for last intercensal period not in accord with census results.
| Vertical bar indicates marked break in series.
[3] Beginning 1946, includes nomad population estimated at 20 000 in 1946, the population of the headquarters of administration located at Mafeking in the Union of South Africa, and other civilian nationals working outside Territory numbering 282 and 14 119 respectively at 1946 census.
[4] Formerly Cameroons, a United Nations Trust Territory under French administration which became independent 1 January 1960.
[5] Estimates are for 31 December.
[6] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[7] Formerly Belgian Congo; declared independent 30 June 1960.
[8] Prior to 1951, excluding Asiatic and Coloured (mixed) population.
[9] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[10] Excludes personnel in military establishments.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
* Données provisoires.
× Estimation non officielle.
§ Les estimations ne concordent pas avec les résultats du recensement.
| Un filet vertical indique une solution de continuité dans la série.
[3] A partir de 1946, y compris la population nomade (estimée à 20 000 personnes en 1946), la population du centre administratif de Mafeking (Union sud-africaine) et les autres civils nationaux travaillant hors du territoire, soit respectivement 282 et 14 119 personnes au recensement de 1946.
[4] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[5] Estimations au 31 décembre.
[6] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant aux dates ci-après: République centrafricaine (anciennement Oubangui-Chari), 13 août; Tchad, 11 août; Congo (anciennement Moyen Congo), 15 août; Gabon, 17 août.
[7] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[8] Pour les années antérieures à 1951, non compris les personnes d'origine asiatique et les personnes de couleur (métis).
[9] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après: Dahomey, le 1er août; Côte d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; le Sénégal, le 20 juin; la Haute-Volta, le 5 août.
[10] Non compris les militaires dans les établissements militaires.

4. Estimations de la population au milieu de l'année : 1920-1960

[Sauf indication contraire, estimations officielles au 1er juillet ou moyennes d'estimations officielles de fin d'année. Les chiffres en caractères gras proviennent de recensements; pour les dates de dénombrement, voir tableau 6. Les chiffres en italique sont des estimations discutables, dont la qualité est déterminée par la méthode qui a servi à les établir; pour les éléments entrant en ligne de compte dans les estimations de 1959, se reporter au tableau 1. Voir explications à la page 74.]

[11] Indigenous population only.
[12] For 1 January.
[13] Prior to 1946, excluding seasonal immigrants ("strange farmers"), numbering, for 1946-1958: 13 263, 14 662, 10 863, 10 981, 16 512, 15 042, 19 720, 11 372, 12 303, 9 648, 9 218, 10 286 and 9 015, respectively.
[14] For 1940-1949, excluding non-African armed forces.
[15] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.
[16] Prior to 1956, excluding population of southern part of Northern Zone (former Spanish Protectorate).
[17] Not in accord with estimates for 1954-1955.
[18] Based on results of demographic sample survey in March and not in accord with estimates for other years obtained from annual administrative reports.
[19] Excludes alien armed forces stationed in the area.
[20] Excludes population of Tangier.
[21] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development, as measured by educational level, language and mode of living.
[22] Former British dependency; declared independent 1 October 1960.
[23] For 31 August.

[11] Population indigène seulement.
[12] Au 1er janvier.
[13] Pour les années antérieures à 1946; non compris les émigrants saisonniers (travailleurs agricoles venant d'autres régions—Strange farmers) dont le nombre, pour les années 1946-1957, s'établit comme suit: 13 263; 14 662; 10 863; 10 981; 16 512; 15 042; 19 720; 11 372; 12 303; 9 648; 9 218; 10 286 et 9 015 respectivement.
[14] Pour 1940-1949, non compris les militaires non africains.
[15] Aussi connu sous le nom de République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la communauté française et a été proclamé indépendant le 25 juin 1960.
[16] Pour les années antérieures à 1956, non compris la partie sud de la zone du Nord (ancien protectorat espagnol).
[17] Ne correspond pas aux estimations établies pour 1954-1955.
[18] Etabli sur la base des résultats d'une enquête démographique par sondage effectuée en mars; ne correspond pas aux estimations obtenues pour d'autres années à partir des rapports administratifs annuels.
[19] Non compris les militaires étrangers en garnison sur le territoire.
[20] Non compris Tanger.
[21] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[22] Ancienne possession britannique; proclamée indépendante le 1er octobre 1960.
[23] Au 31 août.

[26] Formerly known as "Spanish Guinea" and comprising African Provinces of Fernando Póo and Rio Muni.

[27] Prior to 1950, excluding population of Alhucemas, Chafarinas and Peñon de Vélez de la Gomera, totalling 472 in 1940 and 184 in 1950.

[28] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.

[29] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.

[31] Excluding population of Walvis Bay (numbering 2 270 in 1946 and 3 329 in 1951), which is an integral part of the Union but is administered as if it were part of South West Africa.

[32] During war years, including armed forces outside country (approximately 32 000 in 1941) and excluding enemy prisoners of war numbering for 1941-1946: 57 067, 72 451, 66 227, 39 139, 28 255 and 27 898, respectively.

[33] Excluding alien armed forces stationed in the area, enemy prisoners of war and nomad population, the latter numbering 55 073 at 1947 census.

[34] Prior to 1952, excluding nomad population estimated at 179 722 at end of 1956; also excluding refugees numbering at 31 December 1950-1957: 86 841, 91 365, 95 574, 98 474, 101 944, 105 515, 109 388 and 113 204, respectively.

[26] Ancienne Guinée espagnole; provinces africaines de Fernando Póo et Rio Muni.

[27] Pour les années antérieures à 1950, non compris Alhucemas, Chafarinas et Peñon de Vélez-de-la-Gomera, qui comptaient 472 habitants en 1940 et 184 en 1950.

[28] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.

[29] Non compris les réfugiés algériens temporairement dans le pays, estimés à environ 180 000 en 1959.

[31] Non compris Walvis Bay (2 270 personnes en 1946 et 3 329 en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[32] Pour les années de guerre, y compris les militaires hors du pays (environ 32 000 en 1941) et non compris les prisonniers de guerre ennemis dont le nombre, pour chacune des années 1941-1946, s'établit comme suit: 57 061, 72 451, 66 227, 39 139, 28 255, et 27 898 respectivement.

[33] Non compris les militaires étrangers en garnison sur le territoire et les prisonniers de guerre ennemis, ni les nomades au nombre de 55 073 lors du recensement de 1947.

[34] Pour les années antérieures à 1952, non compris la population nomade, estimée à 179 722 personnes à la fin de 1956; à l'exclusion aussi des réfugiés dont le nombre, au 31 décembre de chaque année de la période 1950-1957, s'établissait comme suit: 86 841; 91 365; 95 574; 98 474; 101 944; 105 515; 109 388 et 113 204 respectivement.

[28] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.

[29] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.

[30] Includes civilian nationals temporarily employed outside country but excludes some aliens within country.

[31] Excluding population of Walvis Bay (numbering 2 270 in 1946 and 3 329 in 1951), which is an integral part of the Union but is administered as if it were part of South West Africa.

[32] During war years, including armed forces outside country (approximately 32 000 in 1941) and excluding enemy prisoners of war numbering for 1941-1946: 57 067, 72 451, 66 227, 39 139, 28 255 and 27 898, respectively.

[33] Prior to 1960, excluding alien armed forces stationed in the area, enemy prisoners of war and nomad population, the latter numbering 55 073 at 1947 census.

[34] Prior to 1952, excluding nomad population estimated at 179 722 at end of 1956; prior to 1960, also excluding refugees numbering at 31 December 1950-1957: 86 841, 91 365, 95 574, 98 474, 101 944, 105 515, 109 388 and 113 204, respectively.

[35] Marked increase beginning 1958 due to inclusion of an estimate for unregistered persons.

[28] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.

[29] Non compris les réfugiés algériens temporairement dans le pays, estimés à environ 180 000 en 1959.

[30] Y compris les civils nationaux travaillant temporairement hors du pays, mais non compris certains étrangers dans le pays.

[31] Non compris Walvis Bay (2 270 personnes en 1946 et 3 329 en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[32] Pour les années de guerre, y compris les militaires hors du pays (environ 32 000 en 1941) et non compris les prisonniers de guerre ennemis dont le nombre, pour chacune des années 1941-1946, s'établit comme suit: 57 061, 72 451, 66 227, 39 139, 28 255, et 27 898 respectivement.

[33] Pour les années antérieures à 1960, non compris les militaires étrangers en garnison sur le territoire et les prisonniers de guerre ennemis, ni les nomades au nombre de 55 073 lors du recensement de 1947.

[34] Pour les années antérieures à 1952, non compris la population nomade, estimée à 179 722 personnes à la fin de 1956; pour les années antérieures à 1960, à l'exclusion aussi des réfugiés dont le nombre, au 31 décembre de chaque année de la période 1950-1957, s'établissait comme suit : 86 841; 91 365; 95 574; 98 474; 101 944; 105 515; 109 388 et 113 204 respectivement.

[35] A partir de 1958, augmentation sensible due à l'inclusion dans le total d'une estimation des personnes non enregistrées.

4. Estimates of midyear population : 1920-1960 (continued)

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
[1] *De jure* population.
[5] Estimates are for 31 December.
[36] Excluding tourists and members of United Kingdom and United States armed forces and their dependants stationed in the area.
[37] Estimates are for 1 June.
[38] *De jure* population, but including armed forces stationed in the area.
[39] Prior to 1945, indigenous population, representing approximately 98 per cent of the total.
[44] Estimates are for 7 August.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
[1] Population de droit.
[5] Estimations au 31 décembre.
[36] Non compris les touristes, ni les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leur famille les accompagnant.
[37] Estimation au 1er juin.
[38] Population de droit, mais y compris les militaires en garnison sur le territoire.
[39] Pour les années antérieures à 1945, population indigène, soit 98 pour cent environ de la population totale.
[44] Estimations au 7 août.

4. Estimations de la population au milieu de l'année : 1920-1960 (suite)

[Voir note au début du tableau.]

[45] Excluding population of Canal Zone, shown separately above.
[46] Prior to 1940, excluding Alaska and Hawaii which became the 49th and 50th States of the Union 3 January and 21 August respectively. Beginning 1930, including armed forces overseas.
[50] Estimates are for 5 September.
[51] Excluding Indian jungle population, numbering 45 429 at 1950 census and estimated at 150 000 in 1956.
[52] Prior to 1940, excluding Amerindians of remote districts, estimated at 9 700 in 1921 and 7 379 in 1931.
[53] Estimates are for 5 July.
[54] *De jure* population but excluding Indian jungle population.

[45] Non compris la zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).
[46] Pour les années antérieures à 1940, non compris l'Alaska et Hawaii, qui sont devenus les 49ème et 50ème Etats de l'Union, le 3 janvier et le 21 août 1959 respectivement. A partir de 1930, y compris les militaires à l'étranger.
[50] Estimations au 5 septembre.
[51] Non compris les Indiens de la jungle; 45 429 en 1950 (recensement) et 150 000 in 1956 (estimation).
[52] Pour les années antérieures à 1940, non compris les Amérindiens des régions reculées: 9 700 en 1921 et 7 379 en 1931 (estimation).
[53] Estimations au 5 juillet.
[54] Population de droit, mais non compris les Indiens de la jungle.

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
* Provisional.
× Unofficial estimate.
§ Estimates for last intercensal period not in accord with census results.
| Vertical bar indicates marked break in series.
[1] *De jure* population.
[5] Estimates are for 31 December.
[36] Excluding tourists and members of United Kingdom and United States armed forces and their dependants stationed in the area.
[37] Estimates are for 1 June.
[38] *De jure* population, but including armed forces stationed in the area.
[39] Prior to 1945, indigenous population, representing approximately 98 per cent of the total.
[40] Revised estimates which exclude tourists.
[41] Published by the World Health Organization Regional Office for the Americas.
[42] Published by the Pan American Union.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
* Données provisoires.
× Estimation non officielle.
§ Les estimations ne concordent pas avec les résultats du recensement.
| Un filet vertical indique une solution de continuité dans la série.
[1] Population de droit.
[5] Estimations au 31 décembre.
[36] Non compris les touristes, ni les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leurs familles les accompagnant.
[37] Estimation au 1er juin.
[38] Population de droit, mais y compris les militaires en garnison sur le territoire.
[39] Pour les années antérieures à 1945, population indigène, soit 98 pour cent environ de la population totale.
[40] Estimations revisées (non compris les touristes).
[41] Chiffres publiés par l'Organisation mondiale de la santé (Bureau régional des Amériques).
[42] Chiffres publiés par l'Union panaméricaine.

[43] For 28 January.
[44] Estimates are for 7 August.
[45] Excluding population of Canal Zone, shown separately above.
[46] Prior to 1940, excluding Alaska and Hawaii which became the 49th and 50th States of the Union 3 January and 21 August respectively. Beginning 1930, including armed forces overseas.
[48] For 9 May.
[49] Excludes armed forces overseas, estimated at 680 000.
[50] Estimates are for 5 September.
[51] Excluding Indian jungle population, numbering 45 429 at 1950 census and estimated at 150 000 in 1956.
[52] Prior to 1940, excluding Amerindians of remote districts, estimated at 9 700 in 1921 and 7 379 in 1931.
[53] Estimates are for 5 July.
[54] *De jure* population but excluding Indian jungle population.
[57] Includes 8.4 per cent (227 866) adjustment for underenumeration and an estimate of 87 000 for tribal Indian population.

[43] Au 28 janvier.
[44] Estimations au 7 août.
[45] Non compris la zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).
[46] Pour les années antérieures à 1940, non compris l'Alaska et Hawaii, qui sont devenus les 49ème et 50ème Etats de l'Union, le 3 janvier et le 21 août 1959 respectivement. A partir de 1930, y compris les militaires à l'étranger.
[48] Au 9 mai.
[49] Non compris 680 000 militaires à l'étranger (estimation).
[50] Estimations au 5 septembre.
[51] Non compris les Indiens de la jungle; 45 429 en 1950 (recensement) et 150 000 en 1956 (estimation).
[52] Pour les années antérieures à 1940, non compris les Amérindiens des régions reculées : 9 700 en 1921 et 7 379 en 1931 (estimation).
[53] Estimations au 5 juillet.
[54] Population de droit, mais non compris les Indiens de la jungle.
[57] Après un ajustement destiné à compenser un sous-dénombrement de 8,4 pour cent (227 866) et compte tenu de l'estimation établie pour les Indiens vivant en tribus (87 000).

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
§ Estimates for last intercensal period not in accord with census results.
[1] *De jure* population.
[5] Estimates are for 31 December.
[55] Indian and Negro population living in tribes.
[56] Excluding Indian jungle population, estimated at 46 854 in 1920, 136 147 in 1926, 103 492 in 1936 and 100 600 in 1941 and numbering 56 705 at 1950 special census of indigenous population.
[58] Published by the United Nations Food and Agriculture Organization.
[58a] Beginning 1955, data exclude alien armed forces, merchant seamen and foreign diplomatic personnel.
[59] Estimates for 1922-1930 are for areas enumerated at 1921 census; those for 1932-1940 are for areas enumerated at 1931 census. Areas not enumerated included parts of Arakan Hill Tracts, Upper Chindwin, Myitkyina District, Sumprabum Subdivision, Wa States.
[60] Excluding non-resident military and shipping personnel, numbering 5 944, 5 677 and 36 606 at 1921, 1931 and 1946 censuses, respectively.
[61] Data for 1949-1956 obtained from *Report on Fulfilment of the National Economic Plan of the People's Republic of China in 1956;* for 1957 and 1958, derived from end-year estimates published by the Ministry of Health, Peking, 1959, and the New China News Agency, 4 February 1959.
[62] Excluding armed forces and, beginning 1946, foreigners.
[63] Former British dependency; declared independent 16 August 1960. Data exclude persons in military and special internment camps, numbering 12 422 at 1946 census.
[64] Excluding transients afloat and enemy prisoners of war numbering 822 and 1 394, respectively, at 1947 census; prior to 1947, also excluding non-locally domiciled service personnel and their families, numbering 12 519 at 1947 census.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
§ Les estimations ne concordent pas avec les résultats du recensement.
[1] Population de droit.
[5] Estimations au 31 décembre.
[55] Indiens et noirs vivant en tribus.
[56] Non compris les Indiens de la jungle, au nombre de 46 854 en 1920, 136 147 en 1926, 103 492 en 1936 et 100 600 en 1941 (estimation) et de 56 705 lors du recensement spécial de la population indigène effectué en 1950.
[58] Chiffres publiés par l'Organisation des Nations Unies pour l'alimentation l'agriculture.
[58a] A partir de 1955, non compris les militaires et le personnel diplomatique étrangers et les marins de commerce.
[59] 1922-1930: zones de dénombrement du recensement de 1921; 1932-1940: zones de dénombrement du recensement de 1931. Les régions dont la population n'a pas été dénombrée comprennent des parties de la zone des collines de l'Arakan, le Chindwin supérieur, le district de Myitkyina, la subdivision de Sumprabum et les Etats Wa.
[60] Non compris les militaires et agents des compagnies maritimes non résidants, soit 5 944, 5 677 et 36 606 personnes lors du recensement de 1921, 1931 et 1946 respectivement.
[61] Sources: 1949-1956, *Rapport sur l'exécution du plan économique national de la République populaire de Chine en 1956;* pour 1957 et 1958, d'après les estimations de fin d'année publiées par le Ministère de la santé, Pékin, 1959, et la *New China News Agency*, 4 février 1959.
[62] Non compris les militaires ni, à partir de 1946, les étrangers.
[63] Ancienne dépendance britannique, proclamée indépendante le 16 août 1960. Non compris les personnes se trouvant dans des camps militaires et des camps d'internement spéciaux (12 422 au recensement de 1946).
[64] Non compris les personnes de passage à bord de navires et les prisonniers de guerre ennemis, soit respectivement 822 et 1 394 personnes lors du recensement de 1947. Pour les années antérieures à 1947, non compris également les fonctionnaires civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant, au nombre de 12 519 lors du recensement de 1947.

[65] Excluding armed forces, but including refugees and immigrants, together estimated at 275 000 in 1937; 450 000 in 1938, 700 000 in 1939, 750 000 in 1940 and 600 000 in 1941.

[66] Including data for Sikkim (population enumerated at 81 721 in 1921, 109 808 in 1931, 121 520 in 1941, 137 725 in 1951 and estimated at 150 000 in 1959) and also for Kashmir-Jammu, the final status of which has not yet been determined (population estimated at 4 410 000 in 1951), but prior to 1955, excluding data for Mahé, Karikal, Pondichéry and Yanaon (estimated at 323 000 in 1952), and prior to 1951, also Chandernagor, which were transferred to India by France on 1 November 1954 and 2 May 1950, respectively.

[67] Prior to 1942, data include population of Netherlands New Guinea.

[71] Excluding nomad population, numbering 440 175 at 1956 census. Prior to 1949, estimates are for 20 March.

[72] For October.

[73] See Palestine below.

[74] Prior to 1948, Jewish population of Palestine.

[75] Prior to 1952, excluding Tokara Archipelago, acquired from the Ryukyu Islands on 5 December 1951 (population 2 658 in 1955) and prior to 1954, the Amami Islands, acquired from the Ryukyu Islands on 25 December 1953 (population 205 363 in 1955). 1920-1944: present-in-area population excluding armed forces stationed outside country, estimated at 1 200 000 in 1940. Beginning 1945, excluding Allied military and civilian personnel and their dependants stationed in the area. Prior to 1945, estimates are for 1 October; 1946 estimate is for 1 November.

[76] Excluding foreigners and also military personnel and their dependants living on military installations. Including registered Palestinian refugees numbering at mid-year 1950-1959: 506 200, 465 741, 469 576, 475 620, 486 631, 499 606, 512 706, 517 388, 539 519 and 595 725 respectively.

[65] Non compris les militaires, mais y compris les réfugiés et les immigrants estimés ensemble à 275 000 en 1937, 450 000 en 1938, 700 000 en 1939, 750 000 en 1940 et 600 000 en 1941.

[66] Y compris Sikkim (81 721 habitants dénombrés en 1921, 109 808 en 1931, 121 520 en 1941, 137 725 en 1951 et population estimée à 150 000 en 1959), et le Cachemire-Jammu (population estimée à 4 410 000 en 1951) dont le statut définitif n'a pas encore été déterminé, mais non compris, pour les années antérieures à 1955, Mahé, Karikal, Pondichéry et Yanaon (population estimée à 323 000 en 1952) et, pour les années antérieures à 1951, Chandernagor, cédés à l'Inde par la France le 1er novembre 1954 et le 2 mai 1950, respectivement.

[67] Pour les années antérieures à 1942, y compris la population de la Nouvelle-Guinée néerlandaise.

[71] Non compris les nomades (440 175 au recensement de 1956). Pour les années antérieures à 1949, estimations au 20 mars.

[72] Octobre.

[73] Voir plus bas, Palestine.

[74] Pour les années antérieures à 1948, population juive de la Palestine.

[75] Pour les années antérieures à 1952, non compris l'archipel des Tokara, détaché des îles Ryû-Kyû et rattaché au Japon le 5 décembre 1951 (2 658 habitants en 1955) et, pour les années antérieures à 1954, les îles Amami, détachées des Ryû-Kyû et rattachées au Japon le 25 décembre 1953 (205 363 habitants en 1955). 1920-1944: population présente, non compris les militaires hors du pays, soit 1 200 000 en 1940 (estimation). A partir de 1945, non compris les militaires et civils alliés sur le territoire et les membres de leur famille les accompagnant. Pour les années antérieures à 1945, estimation au 1er octobre; 1946: estimation au 1er novembre.

[76] Non compris les étrangers ni les militaires et les membres de leur famille vivant dans des locaux militaires. Y compris les réfugiés de Palestine immatriculés dont le nombre (au milieu de chaque année pour la période 1950-1959) s'établissait comme suit: 506 200, 465 741, 469 576, 475 620, 486 631, 499 606, 512 706, 517 388, 539 519 et 595 725 respectivement.

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
* Provisional.
§ Estimates for last intercensal period not in accord with census results.
| Vertical bar indicates marked break in series.
[1] *De jure* population.
[5] Estimates are for 31 December.
[42] Published by the Pan American Union.
[55] Indian and Negro population living in tribes.
[56] Excluding Indian jungle population, estimated at 46 854 in 1920, 136 147 in 1926, 103 492 in 1936 and 100 600 in 1941 and numbering 56 705 at 1950 special census of indigenous population.
[58] Published by the United Nations Food and Agriculture Organization.
[58a] Beginning 1955, data exclude alien armed forces, merchant seamen and foreign diplomatic personnel.
[59] Estimates for 1922-1930 are for areas enumerated at 1921 census; those for 1932-1940 are for areas enumerated at 1931 census. Areas not enumerated included parts of Arakan Hill Tracts, Upper Chindwin, Myitkyina District, Sumprabum Subdivision, Wa States.
[60] Excluding non-resident military and shipping personnel, numbering 5 944, 5 677 and 36 606 at 1921, 1931 and 1946 censuses, respectively.
[61] Data for 1949-1956 obtained from *Report on Fulfilment of the National Economic Plan of the People's Republic of China in 1956;* for 1957 and 1958, derived from end-year estimates published by the Ministry of Health, Peking, 1959, and the New China News Agency, 4 February 1959.
[62] Excluding armed forces and, beginning 1946, foreigners.
[63] Former British dependency; declared independent 16 August 1960. Data exclude persons in military and special internment camps, numbering 12 422 at 1946 census.
[64] Excluding transients afloat and enemy prisoners of war numbering 822 and 1 394, respectively, at 1947 census; prior to 1947, also excluding non-locally domiciled service personnel and their families, numbering 12 519 at 1947 census.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.

[65] Excluding armed forces, but including refugees and immigrants, together estimated at 275 000 in 1937; 450 000 in 1938, 700 000 in 1939, 750 000 in 1940 and 600 000 in 1941.

[66] Including data for Sikkim (population enumerated at 81 721 in 1921, 109 808 in 1931, 121 520 in 1941, 137 725 in 1951 and estimated at 150 000 in 1959) and also for Kashmir-Jammu, the final status of which has not yet been determined (population estimated at 4 410 000 in 1951), but prior to 1955, excluding data for Mahé, Karikal, Pondichéry and Yanaon (estimated at 323 000 in 1952), and prior to 1951, also Chandernagor, which were transferred to India by France on 1 November 1954 and 2 May 1950, respectively.

[67] Prior to 1942, data include population of Netherlands New Guinea.

[68] Published by the United Nations Economic Commission for Asia and the Far East.

[69] Estimated from provisional results of an April 1958 demographic sample survey in 3 460 villages, supplemented by administrative reports.

[70] Estimated from results of an April 1959 demographic sample survey in 345 villages, supplemented by administrative reports.

[71] Prior to 1950, excluding nomad population, numbering 240 000 at 1956 census. Prior to 1949, estimates are for 20 March.

[73] See Palestine below.

[74] Prior to 1948, Jewish population of Palestine.

[75] Prior to 1952, excluding Tokara Archipelago, acquired from the Ryukyu Islands on 5 December 1951 (population 2 658 in 1955) and prior to 1954, the Amami Islands, acquired from the Ryukyu Islands on 25 December 1953 (population 205 363 in 1955). 1920-1944: present-in-area population excluding armed forces stationed outside country, estimated at 1 200 000 in 1940. Beginning 1945, excluding Allied military and civilian personnel and their dependants stationed in the area. Prior to 1945, estimates are for 1 October; 1946 estimate is for 1 November.

[76] Excluding foreigners and also military personnel and their dependants living on military installations. Including registered Palestinian refugees numbering at mid-year 1950-1959: 506 200, 465 741, 469 576, 475 620, 486 631, 499 606, 512 706, 517 388, 539 519 and 595 725 respectively.

[65] Non compris les militaires, mais y compris les réfugiés et les immigrants estimés ensemble à 275 000 en 1937, 450 000 en 1938, 700 000 en 1939, 750 000 en 1940 et 600 000 en 1941.

[66] Y compris Sikkim (81 721 habitants dénombrés en 1921, 109 808 en 1931, 121 520 en 1941, 137 725 en 1951 et population estimée à 150 000 en 1959), et le Cachemire-Jammu (population estimée à 4 410 000 en 1951) dont le statut définitif n'a pas encore été déterminé, mais non compris, pour les années antérieures à 1955, Mahé, Karikal, Pondichéry et Yanaon (population estimée à 323 000 en 1952) et, pour les années antérieures à 1951, Chandernagor, cédés à l'Inde par la France le 1er novembre 1954 et le 2 mai 1950, respectivement.

[67] Pour les années antérieures à 1942, y compris la population de la Nouvelle-Guinée néerlandaise.

[68] Chiffres publiés par la Commission économique des Nations Unies pour l'Asie et l'Extrême-Orient.

[69] Estimation établie d'après les résultats provisoires d'une enquête démographique par sondage effectuée en avril 1958 dans 3 460 villages et complétée au moyen de rapports administratifs.

[70] Estimation établie d'après les résultats d'une enquête démographique par sondage effectuée en avril 1959 dans 345 villages, et complétée au moyen de rapports administratifs.

[71] Pour les années antérieures à 1950, non compris les nomades (240 000 au recensement de 1956). Pour les années antérieures à 1949, estimations au 20 mars.

[73] Voir plus bas, Palestine.

[74] Pour les années antérieures à 1948, population juive de la Palestine.

[75] Pour les années antérieures à 1952, non compris l'archipel des Tokara, détaché des îles Ryû-Kyû et rattaché au Japon le 5 décembre 1951 (2 658 habitants en 1955) et, pour les années antérieures à 1954, les îles Amami, détachées des Ryû-Kyû et rattachées au Japon le 25 décembre 1953 (205 363 habitants en 1955). 1920-1944: population présente, non compris les militaires hors du pays, soit 1 200 000 en 1940 (estimation). A partir de 1945, non compris les militaires et civils alliés sur le territoire et les membres de leur famille les accompagnant. Pour les années antérieures à 1945, estimation au 1er octobre; 1946: estimation au 1er novembre.

[76] Non compris les étrangers ni les militaires et les membres de leur famille vivant dans des locaux militaires. Y compris les réfugiés de Palestine immatriculés dont le nombre (au milieu de chaque année pour la période 1950-1959) s'établissait comme suit: 506 200, 465 741, 469 576, 475 620, 486 631, 499 606, 512 706, 517 388, 539 519 et 595 725 respectivement.

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
§ Estimates for last intercensal period not in accord with census results.
| Vertical bar indicates marked break in series.
[1] *De jure* population.
[5] Estimates are for 31 December.
[58] Published by the United Nations Food and Agriculture Organization.
[77] Data are for resident Korean nationals only. Based on residents' register and, prior to 1940, not in accord with results of quinquennial censuses, 1920-1940.
[78] Korean nationals only. Prior to 1950, data relate to population in area south of the 38th parallel.
[79] Data are for Lebanese nationals only, i.e., excluding registered Palestinian refugees, numbering at mid-year 1950-1958: 127 600, 106 896, 104 901, 102 095, 101 636, 103 600, 102 625, 102 586 and 102 291, respectively.
[82] Western end of island of New Guinea. There is a dispute about the territory, as regards its political status, between the Government of Indonesia and the Government of the Netherlands. Prior to 1941, data are included in Indonesia.
[83] Prior to 1946, excluding Labuan acquired from Straits Settlement in 1946 (population 7 507 at 1 April 1931 census).

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
§ Les estimations ne concordent pas avec les résultats du recensement.
| Un filet vertical indique une solution de continuité dans la série.
[1] Population de droit.
[5] Estimations au 31 décembre.
[58] Chiffres publiés par l'Organisation des Nations Unies pour l'alimentation et l'agriculture.
[77] Nationaux coréens résidents seulement. D'après le registre des résidents; pour les années antérieures à 1940 ne concorde pas avec les résultats des recensements quinquennaux effectués de 1920 à 1940.
[78] Nationaux coréens seulement. Pour les années antérieures à 1950, les données se rapportent à la population du territoire situé au sud du 38ème parallèle.
[79] Nationaux libanais seulement, c'est-à-dire non compris les réfugiés de Palestine immatriculés dont le nombre (au milieu de chaque année pour la période 1950-1958)—s'établissait comme suit: 127 600, 106 896, 104 901, 102 095, 101 636, 103 600, 102 625, 102 586 et 102 291 respectivement.
[82] Extrémité occidentale de l'île de la Nouvelle-Guinée. Le statut politique du territoire fait l'objet d'un différend entre les gouvernements indonésien et néerlandais. Pour les années antérieures à 1941, données comprises dans celles de l'Indonésie.
[83] Non compris l'île de Labouan, détachée des Etablissements des détroits en 1946 (7 507 habitants au recensement du 1er avril 1931).

[84] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Junagadh, Manavadar, Gilgit, Baltistan and the port and peninsula of Gwadar, the latter acquired from Muscat and Oman on 8 September 1958.

[85] Territory formerly under British mandate. Population excludes military personnel, numbering 5 134 and 2 507 at 1922 and 1931 censuses respectively.

[86] For 1950-1954 and 1958-1960, data are for registered Palestinian refugees only. Corresponding estimates for 1955-1957 are 214 601, 216 971 and 221 058, respectively.

[87] For 1939-1943, data include, and for 1944, exclude, Japanese military personnel. Beginning 1945, data exclude Allied military and civilian personnel and their dependants stationed in the area. Prior to 1940, estimates are for 1 April.

[88] Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants, numbering 3 466 and 27 299, respectively, at 1957 census. Also excluding Japanese surrendered personnel, numbering 7 517 at 1947 census.

[90a] Includes adjustment for underenumeration.

[91] Prior to 1939, excluding Hatay, acquired from Syria 29 June 1939, with population estimated at 204 000 at time of transfer. Estimates are for 20 October.

[92] Beginning 1934, *de jure* population.

[93] Prior to 1941, excluding population of Southern Dobruja.

[84] Non compris le Junagadh, le Manavadar, le Gilgit et le Baltistan, ni le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le port et la péninsule de Gwadar, cédés par Mascate et Oman le 8 septembre 1958.

[85] Territoire auparavant sous mandat britannique. Non compris les militaires au nombre de 5 134 et 2 507 aux recensements de 1922 et 1931 respectivement.

[86] Pour les années 1950-1954 et 1958-1960, les données se rapportent uniquement aux réfugiés de Palestine immatriculés. Voici les estimations pour 1955, 1956 et 1957: 214 601, 216 971 et 221 058, respectivement.

[87] Y compris pour 1939-1943, mais non compris pour 1944, les militaires japonais. A partir de 1945, non compris les militaires et agents civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant. Pour les années antérieures à 1940, estimations au 1er avril.

[88] Non compris les personnes de passage à bord de navires, ni les militaires et les fonctionnaires civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant, soit respectivement 3 466 et 27 299 personnes lors du recensement de 1957. Non compris également personnel japonais capturés (7 517 au recensement de 1947).

[90a] Compte tenu d'un ajustement pour sous-dénombrement.

[91] Pour les années antérieures à 1939, non compris Hatay, cédée par la Syrie le 29 juin 1939 (population estimée à 204 000 à l'époque). Estimations au 20 octobre.

[92] A partir de 1934, population de droit.

[93] Pour les années antérieures à 1941, non compris la population de Dobroudja méridionale.

[84] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Junagadh, Manavadar, Gilgit, Baltistan and the port and peninsula of Gwadar, the latter acquired from Muscat and Oman on 8 September 1958.

[85] Territory formerly under British mandate. Population excludes military personnel, numbering 5 134 and 2 507 at 1922 and 1931 censuses respectively.

[86] For 1950-1954 and 1958-1960, data are for registered Palestinian refugees only. Corresponding estimates for 1955-1957 are 214 601, 216 971 and 221 058, respectively.

[87] For 1939-1943, data include, and for 1944, exclude, Japanese military personnel. Beginning 1945, data exclude Allied military and civilian personnel and their dependants stationed in the area. Prior to 1940, estimates are for 1 April.

[88] Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants, numbering 3 466 and 27 299, respectively, at 1957 census. Also excluding Japanese surrendered personnel, numbering 7 517 at 1947 census.

[89] For 1 June.

[90] For March.

[91] Prior to 1939, excluding Hatay, acquired from Syria 29 June 1939, with population estimated at 204 000 at time of transfer. Estimates are for 20 October.

[92] Beginning 1934, *de jure* population.

[93] Prior to 1941, excluding population of Southern Dobruja.

[105] Includes displaced persons. Estimate for 1946 is for 21 July; that for 1947, for 22 June.

[106] Excludes population of 41 communes not under Belgian administration, numbering 88 090 in 1939.

[84] Non compris le Junagadh, le Manavadar, le Gilgit et le Baltistan, ni le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le port et la péninsule de Gwadar, cédés par Mascate et Oman le 8 septembre 1958.

[85] Territoire auparavant sous mandat britannique. Non compris les militaires au nombre de 5 134 et 2 507 aux recensements de 1922 et 1931 respectivement.

[86] Pour les années 1950-1954 et 1958-1960, les données se rapportent uniquement aux réfugiés de Palestine immatriculés. Voici les estimations pour 1955, 1956 et 1957: 214 601, 216 971 et 221 058, respectivement.

[87] Y compris pour 1939-1943, mais non compris pour 1944, les militaires japonais. A partir de 1945, non compris les militaires et agents civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant. Pour les années antérieures à 1940, estimations au 1er avril.

[88] Non compris les personnes de passage à bord de navires, ni les militaires et les fonctionnaires civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant, soit respectivement 3 466 et 27 299 personnes lors du recensement de 1957. Non compris également personnel japonais capturé (7 517 au recensement de 1947).

[89] Au 1er juin.

[90] Mars.

[91] Pour les années antérieures à 1939, non compris Hatay, cédée par la Syrie le 29 juin 1939 (population estimée à 204 000 à l'époque). Estimations au 20 octobre.

[92] A partir de 1934, population de droit.

[93] Pour les années antérieures à 1941, non compris la population de Dobroudja méridionale.

[105] Y compris les personnes déplacées. Pour 1946, estimation au 21 juillet; pour 1947, au 22 juin.

[106] Non compris 41 communes ne relevant pas de l'administration belge (88 090 habitants en 1939).

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
[1] *De jure* population.
[5] Estimates are for 31 December.
[94] Excluding armed forces.
[95] Prior to 1945, excluding population of one village of former Subcarpathian Russia, but including 12 villages of Eastern Slovakia ceded to USSR in 1945; prior to 1948, excluding Bratislava Bridgehead, acquired from Hungary in 1947 (population 3 379 in 1941).
[96] Excluding the population of Vitoraz, Valcice and Hlucín, territories incorporated in 1920 by the treaties of St. Germain and Versailles, and together amounting to 496 km^2.
[97] Excluding Faeroe Islands and Greenland, shown separately. Beginning 1940, *de jure* population.
[98] Prior to 1950, Finnish nationals in Finland only; beginning 1950, population present-in-area, but from 1951, including Finnish nationals temporarily outside country.
[99] Excluding alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country, and prisoners of war (estimated at 663 000 in 1946 and 486 000 in 1947); 1940-1945, excluding all armed forces outside country but beginning 1946, only members of career military service except those on duty in Germany or Austria. Including merchant seamen at sea; beginning 1946, military conscripts wherever stationed and all personnel on duty in Germany and Austria and their dependants, together estimated at 312 000 in 1946 and 186 500 (excluding estimate for merchant seamen, who were included in 1954 enumeration) in 1954. Also including civilian residents temporarily outside country.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
[1] Population de droit.
[5] Estimations au 31 décembre.
[12] Au 1er janvier.
[94] Non compris les militaires.
[95] Pour les années antérieures à 1946, non compris un village de l'ancienne Russie subcarpathique, mais y compris 12 villages de la partie orientale de la Slovaquie cédée à l'URSS en 1945; pour les années antérieures à 1948, non compris la tête de pont de Bratislava cédée par la Hongrie en 1947 (3 379 habitants en 1941).
[96] Non compris Vitoraz, Valcice et Hlucín, rattachés en 1920 par les Traités de Saint-Germain et de Versailles (496 km^2 au total).
[97] Non compris les îles Féroé et le Groenland qui font l'objet de rubriques distinctes. A partir de 1940, population de droit.
[98] Pour les années antérieures à 1950, nationaux finlandais se trouvant en Finlande seulement; à partir de 1950, population présente mais, à partir de 1951, y compris les Finlandais temporairement hors du pays.
[99] Non compris les militaires et le personnel diplomatique étrangers dans le pays, ni le personnel diplomatique français hors du pays, ni les prisonniers de guerre (au nombre de 663 000 en 1946 et de 486 000 en 1947 selon les estimations); 1940-1945: non compris l'ensemble des militaires hors du pays, mais à partir de 1946 non compris, seulement les militaires de carrière, à l'exception de ceux des troupes d'occupation en Allemagne et en Autriche. Y compris les équipages de la marine marchande en mer et, à partir de 1946, les militaires du contingent où qu'ils se trouvent ainsi que tous les civils et militaires en occupation en Allemagne et en Autriche avec les membres de leur famille les accompagnant, soit au total 312 000 personnes en 1946 et 186 500 en 1954 (déduction faite, dans ce dernier cas, de l'effectif estimé des équipages de la marine marchande compris dans la population dénombrée en 1954). Y compris également les civils résidants temporairement hors du pays.

[100] Data are for territory of 1937 (i.e., including Berlin).
[101] Includes population of part of Upper Silesia ceded to Poland in 1921 after a plebiscite.
[102] Excluding East Berlin shown separately below.
[103] Excludes population of the Saar.
[104] Excluding armed forces and displaced persons.
[109] Prior to 1948, excluding the Dodecanese ceded by Italy in October 1947 (population 115 343 at time of transfer). Including armed forces stationed outside country but excluding alien armed forces stationed in the area.
[110] Prior to 1930, including Bratislava Bridgehead ceded to Czechoslovakia in 1947 (population 3 379 in 1941).
[111] 1 November estimate, excluding 1 000 seamen normally resident.
[112] 1936-1950: including armed forces and civilians stationed outside country.
[113] Excluding non-Maltese armed forces stationed in the area and beginning 1957, including civilian nationals temporarily outside country.
[114] Prior to 1946, territory of 1937, i.e., including areas ceded to USSR after World War II, and excluding Danzig and areas formerly part of Germany.

[100] Territoire de 1937 (c.à.d. y compris Berlin).
[101] Y compris la population de la partie de la Haute-Silésie cédée à la Pologne en 1921 à la suite d'un plébiscite.
[102] Non compris Berlin-Est qui fait l'objet d'une rubrique distincte.
[103] Non compris la Sarre.
[104] Non compris les militaires et personnes déplacées.
[109] Pour les années antérieures à 1948, non compris le Dodécanèse cédé par l'Italie en octobre 1947 (115 343 habitants à l'époque). Y compris les militaires en garnison hors du pays mais non compris les militaires étrangers en garnison sur le territoire.
[110] Pour les années antérieures à 1930, y compris la tête de pont de Bratislava cédée à la Tchécoslovaquie en 1947 (3 379 habitants en 1941).
[111] Estimation au 1er novembre (non compris 1 000 marins résidant normalement sur le territoire).
[112] 1936-1950: y compris les militaires et civils en poste hors du pays.
[113] Non compris les militaires non maltais en garnison sur le territoire, y compris les civils nationaux temporairement hors du territoire.
[114] Pour les années antérieures à 1946, territoire de 1937, c.à.d. y compris les zones cédées à l'URSS après la deuxième guerre mondiale, mais non compris Dantzig et les régions faisant antérieurement partie de l'Allemagne.

Bold face indicates that data are census results.
Italics indicate estimates of questionable reliability.
* Provisional.
§ Estimates for last intercensal period not in accord with census results.
[1] *De jure* population.
[5] Estimates are for 31 December.
[47] For 1 May.
[94] Excluding armed forces.
[95] Prior to 1945, excluding population of one village of former Subcarpathian Russia, but including 12 villages of Eastern Slovakia ceded to USSR in 1945; prior to 1948, excluding Bratislava Bridgehead, acquired from Hungary in 1947 (population 3 379 in 1941).
[97] Excluding Faeroe Islands and Greenland, shown separately. Beginning 1940, *de jure* population.
[98] Prior to 1950, Finnish nationals in Finland only; beginning 1950, population present-in-area, but from 1951, including Finnish nationals temporarily outside country.
[99] Excluding alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country, and prisoners of war (estimated at 663 000 in 1946 and 486 000 in 1947); 1940-1945, excluding all armed forces outside country but beginning 1946, only members of career military service except those on duty in Germany or Austria. Including merchant seamen at sea; beginning 1946, military conscripts wherever stationed and all personnel on duty in Germany and Austria and their dependants, together estimated at 312 000 in 1946 and 186 500 (excluding estimate for merchant seamen, who were included in 1954 enumeration) in 1954. Also including civilian residents temporarily outside country.

Caractères gras: les données proviennent de recensements.
Italique: estimations de qualité douteuse.
* Données provisoires.
§ Les estimations ne concordent pas avec les résultats du recensement.
[1] Population de droit.
[5] Estimations au 31 décembre.
[47] Au 1er mai.
[94] Non compris les militaires.
[95] Pour les années antérieures à 1946, non compris un village de l'ancienne Russie subcarpathique, mais y compris 12 villages de la partie orientale de la Slovaquie cédée à l'URSS en 1945; pour les années antérieures à 1948, non compris la tête de pont de Bratislava cédée par la Hongrie en 1947 (3 379 habitants en 1941).
[97] Non compris les îles Féroé et le Groenland qui font l'objet de rubriques distinctes. A partir de 1940, population de droit.
[98] Pour les années antérieures à 1950, nationaux finlandais se trouvant en Finlande seulement; à partir de 1950, population présente mais, à partir de 1951, y compris les Finlandais temporairement hors du pays.
[99] Non compris les militaires et le personnel diplomatique étrangers dans le pays, ni le personnel diplomatique français hors du pays, ni les prisonniers de guerre (au nombre de 663 000 en 1946 et de 486 000 en 1947 selon les estimations); 1940-1945: non compris l'ensemble des militaires hors du pays, mais à partir de 1946 non compris, seulement les militaires de carrière, à l'exception de ceux des troupes d'occupation en Allemagne et en Autriche. Y compris les équipages de la marine marchande en mer et, à partir de 1946, les militaires du contingent où qu'ils se trouvent ainsi que tous les civils et militaires en occupation en Allemagne et en Autriche avec les membres de leur famille les accompagnant, soit au total 312 000 personnes en 1946 et 186 500 en 1954 (déduction faite, dans ce dernier cas, de l'effectif estimé des équipages de la marine marchande compris dans la population dénombrée en 1954). Y compris également les civils résidants temporairement hors du pays.

[100] Data are for territory of 1937 (i.e., including Berlin).
[102] Excluding East Berlin shown separately below.
[104] Excluding armed forces and displaced persons.
[107] Excludes data for dependencies of Guernsey.
[108] Excludes persons in International Refugee Organization camps, prisoners of war and civilians in internment camps.
[109] Prior to 1948, excluding the Dodecanese ceded by Italy in October 1947 (population 115 343 at time of transfer). Including armed forces stationed outside country but excluding alien armed forces stationed in the area.
[110] Prior to 1930, including Bratislava Bridgehead ceded to Czechoslovakia in 1947 (population 3 379 in 1941).
[112] 1936-1950: including armed forces and civilians stationed outside country.
[113] Excluding non-Maltese armed forces stationed in the area and beginning 1957, including civilian nationals temporarily outside country.
[114] Prior to 1946, territory of 1937, i.e., including areas ceded to USSR after World War II, and excluding Danzig and areas formerly part of Germany.
[118] Excludes population of Northern Transylvania, temporarily ceded to Hungary.

[100] Territoire de 1937 (c.a.d. y compris Berlin).
[102] Non compris Berlin-Est qui fait l'objet d'une rubrique distincte.
[104] Non compris les militaires et personnes déplacées.
[107] Non compris les dépendances de Guernesey.
[108] Non compris les personnes dans les camps de l'Organisation internationale pour les réfugiés, les prisonniers de guerre et les civils dans des camps d'internement.
[109] Pour les années antérieures à 1948, non compris le Dodécanèse cédé par l'Italie en octobre 1947 (115 343 habitants à l'époque). Y compris les militaires en garnison hors du pays mais non compris les militaires étrangers en garnison sur le territoire.
[110] Pour les années antérieures à 1930, y compris la tête de pont de Bratislava cédée à la Tchécoslovaquie en 1947 (3 379 habitants en 1941).
[112] 1936-1950: y compris les militaires et civils en poste hors du pays.
[113] Non compris les militaires non maltais en garnison sur le territoire, y compris les civils nationaux temporairement hors du territoire.
[114] Pour les années antérieures à 1946, territoire de 1937, c.à.d. y compris les zones cédées à l'URSS après la deuxième guerre mondiale, mais non compris Dantzigret les régions faisant antérieurement partie de l'Allemagne.
[118] Non compris la population de la Transylvanie septentrionale, temporairement cédée à la Hongrie.

[121] Prior to 1959, estimates are for 31 March.
[122] Including data for the condominium of Canton and Enderbury.
[123] Except for 1930-1940, 1950 and 1960, data exclude United States military personnel, their dependants and contract employees.
[124] Prior to 1940, data are for 1 April.
[128] Excluding enemy prisoners of war and alien armed forces within country; beginning 1940, data exclude also armed forces stationed outside country.
[129] Beginning 1947, data exclude United States military personnel, their dependants and contract employees.
[130] Prior to 1947, estimates are for full-blooded Europeans only.
[131] Prior to 1946, estimates are for 31 March.
[132] Excludes population of western provinces of the Ukrainian SSR and the Byelorussian SSR, the Moldavian SSR, the Lithuanian SSR, the Latvian SSR and the Estonian SSR but includes data for areas assigned to Poland under the 1945 treaty.
[133] Includes estimate for the western provinces of the Ukrainian SSR and of the Byelorussian SSR, the Moldavian SSR, the Lithuanian SSR, the Latvian SSR and the Estonian SSR.

[121] Pour les années antérieures à 1959, estimations au 31 mars.
[122] Y compris le condominium des îles Canton et Enderbury.
[123] Sauf pour 1930-1940, 1950 et 1960, non compris les militaires des Etats-Unis, les personnes à leur charge et les agents contractuels americains.
[124] Pour les années antérieures à 1940, chiffres au 1er mars.
[128] Non compris les prisonniers de guerre ennemis et les militaires étrangers dans le pays; à partir de 1940, non compris également les militaires nationaux hors du pays.
[129] A partir de 1947, non compris les militaires des Etats-Unis, les personnes à leur charge et les agents contractuels américains.
[130] Pour les années antérieures à 1947, les estimations ne se rapportent qu'aux Européens de race pure.
[131] Pour les années antérieures à 1946, estimations au 31 mars.
[132] Non compris la population des provinces occidentales des RSS d'Ukraine et de Biélorussie, de la RSS de Moldavie, de la RSS de Lituanie, de la RSS de Lettonie et de la RSS d'Estonie, mais y compris celle des régions attribuées à la Pologne en vertu du Traité de 1945.
[133] Y compris la population estimée des provinces occidentales des RSS d'Ukraine et de Biélorussie, de la RSS de Moldavie, de la RSS de Lituanie, de la RSS de Lettonie et de la RSS d'Estonie.

[121] Prior to 1959, estimates are for 31 March.
[122] Including data for the condominium of Canton and Enderbury.
[123] Except for 1930-1940, 1950 and 1960, data exclude United States military personnel, their dependants and contract employees.
[124] Prior to 1940, data are for 1 April.
[125] For 31 March.
[126] For 1 March.
[127] For 26 August.
[128] Excluding enemy prisoners of war and alien armed forces within country; beginning 1940, data exclude also armed forces stationed outside country.
[129] Beginning 1947, data exclude United States military personnel, their dependants and contract employees.
[130] Prior to 1947, estimates are for full-blooded Europeans only.
[131] Prior to 1946, estimates are for 31 March.
[134] Includes armed forces stationed in the area.
[135] For Tongan population only.
[136] For 1 April.

[121] Pour les années antérieures à 1959, estimations au 31 mars.
[122] Y compris le condominium des îles Canton et Enderbury.
[123] Sauf pour 1930-1940, 1950 et 1960, non compris les militaires des Etats-Unis, les personnes à leur charge et les agents contractuels americains.
[124] Pour les années antérieures à 1940, chiffres au 1er mars.
[125] Au 31 mars.
[126] Au 1er mars.
[127] Au 26 août.
[128] Non compris les prisonniers de guerre ennemis et les militaires étrangers dans le pays; à partir de 1940, non compris également les militaires nationaux hors du pays.
[129] A partir de 1947, non compris les militaires des Etats-Unis, les personnes à leur charge et les agents contractuels américains.
[130] Pour les années antérieures à 1947, les estimations ne se rapportent qu'aux Européens de race pure.
[131] Pour les années antérieures à 1946, estimations au 31 mars.
[134] Y compris les militaires en garnison sur le territoire.
[135] Tongans seulement.
[136] Au 1er avril.

5. Population by age and sex : 1940-1960

Italics indicate estimates of questionable reliability.

[1] Excluding personnel in military establishments.

[2] Age classification based on year of birth rather than on completed years of age.

[3] *De jure* population actually enumerated but excluding persons in institutions, personnel in military establishments, merchant seamen, armed forces and diplomatic personnel stationed outside country, and some Moslem workers in France.

[4] For 15-20 years.

Italique : estimations de qualité douteuse.

[1] Non compris les personnes dans les établissements militaires.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[3] Population de droit effectivement dénombrée, mais non compris les personnes vivant dans des institutions, les personnes dans les établissements militaires, les marins de commerce, les militaires et le personnel diplomatique en poste hors du pays, ainsi que certains travailleurs musulmans en France.

[4] 15 à 20 ans.

5. Population selon l'âge et le sexe : 1940-1960

[Les chiffres en italique sont des estimations dont la qualité, évaluée d'après la méthode utilisée pour les établir décrit à la page 66, est discutable. Voir explications à la page 79.]

[5] For 21-24 years.
[6] Including population of Mafeking, the capital, which is located in the Union of South Africa, and civilian nationals working outside territory, together numbering 14 461.
[7] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.
[8] For under 2 years.
[9] For 2-6 years.
[10] For 7-14 years.

[5] 21 à 24 ans.
[6] Y compris la population de la capitale (Mafeking) située dans l'Union sud-africaine et les nationaux civils travaillant hors du Territoire, soit au total 14 461.
[7] On ne connaît pas la raison pour laquelle ce chiffre s'écarte légèrement du chiffre correspondant donné ailleurs.
[8] Moins de 2 ans.
[9] 2 à 6 ans.
[10] 7 à 14 ans.

Italics indicate estimates of questionable reliability.

[14] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.

[17] For under 18 years.

[18] For 18-59 years.

Italique : estimations de qualité douteuse.

[14] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari) le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.

[17] Moins de 18 ans.

[18] 18 à 59 ans.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[25] For 1-15 years.
[26] For 16-44 years.
[27] Data based on final results of 1955 demographic sample survey covering approximately 300 000 persons of both sexes.
[28] For under 14 years.
[29] For 14 years and over.
[30] Summation of frequencies for age groups gives total of 1 347 444. Reason for discrepancy not ascertained.

[25] 1 à 15 ans.
[26] 16 à 44 ans.
[27] D'après les résultats définitifs de l'enquête démographique par sondage de 1955 qui a porté sur environ 300 000 personnes des deux sexes.
[28] Moins de 14 ans.
[29] 14 ans et plus.
[30] La somme des données pour les différents groupes d'âge est 1 347 444. On ne connaît pas la raison de cet écart.

[31] Population actually enumerated; excluding an estimate of 219 000 for population of Northern Frontier Provinces and parts of Rift Valley only partially covered by census and 1 633 persons in transit.
[32] For under 16 years.
[33] For 16 years and over.
[34] Excluding armed forces, 2 504 persons in transit and 188 Polish refugees in camps.
[35] Excluding alien armed forces stationed in the area.
[36] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

[31] Population effectivement dénombrée; non compris 219 000 (estimation) habitants des Provinces de la Frontière du Nord et de certaines parties de la vallée du Rift qui n'ont été que partiellement recensés et 1 633 personnes de passage.
[32] Moins de 16 ans.
[33] 16 ans et plus.
[34] Non compris les militaires, 2 504 personnes de passage et 188 réfugiés polonais vivant dans des camps.
[35] Non compris les militaires étrangers en garnison sur le territoire.
[36] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.

Italics indicate estimates of questionable reliability.

[13] *De jure* population.

[22] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

Italique : estimations de qualité douteuse.

[13] Population de droit.

[22] Ce pays qui faisait partie de l'Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte d'Ivoire, le 7 août, Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[28] For under 14 years.
[29] For 14 years and over.
[37] Including data for dependency of Rodrigues.
[38] Excluding 215 European military personnel and 56 crew members and passengers on ships in harbours.
[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

[28] Moins de 14 ans.
[29] 14 ans et plus.
[37] Y compris la possession de Rodrigues.
[38] Non compris 215 militaires européens et 56 hommes d'équipage et passagers à bord de navires dans les ports.
[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.

[7] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.
[13] De jure population.
[20] For 61 years and over.
[22] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[56] For under 11 years.

[7] On ne connaît pas la raison pour laquelle ce chiffre s'écarte légèrement du chiffre correspondant donné ailleurs.
[13] Population de droit.
[20] 61 ans et plus.
[22] Ce pays qui faisait partie de l'Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août, Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.
[56] Moins de 11 ans.

Italics indicate estimates of questionable reliability.

[7] Reason for slight discrepancies between this and corresponding figure shown elsewhere not ascertained.

[13] De jure population.

[32] For under 16 years.

[45] For over puberty.

[64] For 5 years of age to under puberty.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[66] For over puberty but not past child-bearing age.

[67] For past child-bearing age.

[68] For over puberty unspecified.

[69] For 1-6 years.

[70] For 7-12 years.

[71] For 13-17 years.

[72] For 18-49 years.

Italique : estimations de qualité douteuse.

[7] On ne connaît pas la raison pour laquelle ce chiffre s'écarte légèrement du chiffre correspondant donné ailleurs.

[13] Population de droit.

[32] Moins de 16 ans.

[45] Passé la puberté.

[64] De 5 ans à la puberté.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[66] De la puberté à la fin de l'âge de procréation.

[67] Passé l'âge de procréation.

[68] Passé la puberté, sans autre indication.

[69] 1 à 6 ans.

[70] 7 à 12 ans.

[71] 13 à 17 ans.

[72] 18 à 49 ans.

[73] Population actually enumerated, excluding adjustment for underenumeration estimated at 8 per cent.
[74] Excluding armed forces and including 2 752 persons in transit.
[75] For 1-5 years.
[76] For 6-14 years.
[77] Excluding armed forces and 5 397 Polish refugees in camps.
[78] Excluding armed forces.
[79] Formerly Togoland, a United Nations Trust Territory under French administration, which became independent 27 April 1960.
[80] For under 6 years.
[81] Reported as adults.
[82] Reported as old people (vieillards).
[83] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959. Distribution based on 10 per cent sample of census returns. Data relating to Moslem population smoothed.

[73] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement estimé à 8 pour 100.
[74] Non compris les militaires, mais y compris 2 752 personnes de passage.
[75] 1 à 5 ans.
[76] 6 à 14 ans.
[77] Non compris les militaires et 5 397 réfugiés polonais vivant dans des camps.
[78] Non compris les militaires.
[79] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.
[80] Moins de 6 ans.
[81] Personnes déclarées "adultes".
[82] Personnes déclarées "vieillards".
[83] Non compris les réfugiés algériens temporairement dans le pays, estimés à environ 180 000 en 1959. Répartition fondée sur un échantillon de 10 pour 100 des bulletins de recensement. Les données relatives à la population musulmane ont été lissées.

Italics indicate estimates of questionable reliability.

[13] De jure population.

[22] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[28] For under 14 years.

Italique : estimations de qualité douteuse.

[13] Population de droit.

[22] Ce pays qui faisait partie de l'Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août, Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[28] Moins de 14 ans.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[29] For 14 years and over.

[88] Including armed forces outside country and excluding enemy prisoners of war within country.

[89] Excluding population of Walvis Bay (numbering 2 321 non-White and 1 008 White) which is an integral part of the Union but is administered as if it were part of South West Africa.

[90] Excluding nomad population (numbering 27 270 males, 27 803 females), alien armed forces, their dependents and enemy prisoners of war in the area.

[29] 14 ans et plus.

[88] Y compris les militaires hors du pays, mais non compris les prisonniers de guerre ennemis dans le pays.

[89] Non compris Walvis Bay (2 321 non-blancs et 1 008 blancs), ville qui fait partie intégrante de l'Union mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[90] Non compris les nomades (27 270 hommes et 27 803 femmes), les militaires étrangers et les personnes à leur charge, ainsi que les prisonniers de guerre ennemis sur le territoire.

Italics indicate estimates of questionable reliability.

[2] Age classification based on year of birth rather than on completed years of age.

[17] For under 18 years.

[72] For 18-49 years.

[97] Excluding migratory balance, for which data by age and sex are not available.

[98] Comparatively high frequencies due to inclusion of arbitrary adjustments, totalling approximately 1 million persons for both sexes, to cover under-enumeration.

Italique : estimations de qualité douteuse.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[17] Moins de 18 ans.

[72] 18 à 49 ans.

[97] Non compris la migration nette pour laquelle on ne possède pas de données selon l'âge et le sexe.

[98] Nombre relativement élevé dû à l'inclusion d'ajustements arbitraires (1 million environ de personnes des deux sexes) destinés à compenser le sous-dénombrement.

5. Population selon l'âge et le sexe (suite)

[72] *9 996*							*2 074*				–	29

[99] *De jure* population, both excluding diplomatic personnel stationed outside country, numbering 84 for both sexes.
[100] Population actually enumerated, i.e., excluding adjustment for under-enumeration estimated at 4.3 per cent for both sexes.
[101] For Aruba, Bonaire and Curaçao only.
[102] For 5-15 years.
[103] For 16-17 years.
[104] For 18-22 years.
[105] For 23-45 years.
[106] For 46-54 years.

[99] Population de droit, mais y compris le personnel diplomatique en poste hors du pays (84 pour les deux sexes).
[100] Population dénombrée effectivement, c'est-à-dire compte non tenu d'un ajustement pour sous-dénombrement estimé à 4,3 pour 100 pour les deux sexes.
[101] Aruba, Bonaire et Curaçao seulement.
[102] 5 à 15 ans.
[103] 16 et 17 ans.
[104] 18 à 22 ans.
[105] 23 à 45 ans.
[106] 46 à 54 ans.

Italics indicate estimates of questionable reliability.
[13] *De jure* population.
[16] For 51 years and over.
[17] For under 18 years.
[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.
[69] For 1-6 years.

Italique : estimations de qualité douteuse.
[13] Population de droit.
[16] 51 ans et plus.
[17] Moins de 18 ans.
[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.
[69] 1 à 6 ans.

5. Population selon l'âge et le sexe (suite)

[72] For 18-49 years.
[107] Including adjustment of 147 474 for both sexes (17.6 per cent) for under-enumeration.
[108] Excluding Canal Zone and also tribal Indian (indigenous) population, both shown separately.
[109] Tribal Indian population.
[110] For 7-15 years.
[111] For 16-50 years.

[72] 18 à 49 ans.
[107] Y compris un ajustement pour sous-dénombrement (147 474 personnes des deux sexes, soit 17,6 pour 100).
[108] Non compris la population de la zone du Canal et les Indiens vivant en tribus (population indigène); des chiffres distincts sont donnés pour chacune de ces deux populations.
[109] Indiens vivant en tribus.
[110] 7 à 15 ans.
[111] 16 à 50 ans.

[13] *De jure* population.
[49] For 5-17 years.
[65] Because of rounding, totals are not in all cases the sum of the parts.
[78] Excluding armed forces.
[96] *De jure* population, but including armed forces stationed in the area.
[112] For 18-44 years.
[113] St. Pierre only.

[13] Population de droit.
[49] 5 à 17 ans.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.
[78] Non compris les militaires.
[96] Population de droit, mais y compris les militaires en garnison sur le territoire.
[112] 18 à 44 ans.
[113] St-Pierre seulement.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[114] Prior to 1959, excluding Alaska and prior to 1960 excluding Hawaii (which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively). Estimates include armed forces overseas. 1941-1949, unrevised estimates.

[115] Population actually enumerated, i.e., excluding adjustment for under-enumeration estimated at 2.5 per cent (3 800 000) in 1950. *De jure* population but excluding armed forces overseas, estimated at 435 000 in 1950.

[114] Pour les années antérieures à 1959, non compris l'Alaska, et pour les années antérieures à 1960, non compris Hawaii (qui sont devenus les 49ème et 50ème Etats de l'Union le 3 janvier et le 21 août 1959 respectivement). Les estimations comprennent les militaires à l'étranger. 1941-1949 : estimations non revisées.

[115] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,5 pour 100 (3 800 000) en 1950. Population de droit, mais non compris les militaires à l'étranger estimés à 435 000 en 1950.

5. Population by age and sex (continued)

[65] Because of rounding, totals are not in all cases the sum of the parts.
[96] *De jure* population, but including armed forces stationed in the area.
[114] Prior to 1959, excluding Alaska and prior to 1960 excluding Hawaii (which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively). Estimates include armed forces overseas. 1941-1949, unrevised estimates.

[65] Les chiffres ayant été arrondis, les totaux ne coïncident pas toujours avec la somme des données partielles.
[96] Population de droit, mais y compris les militaires en garnison sur le territoire.
[114] Pour les années antérieures à 1959, non compris l'Alaska, et pour les années antérieures à 1960, non compris Hawaii (qui sont devenus les 49ème et 50ème Etats de l'Union le 3 janvier et le 21 août 1959 respectivement). Les estimations comprennent les militaires à l'étranger. 1941-1949 : estimations non revisées.

5. Population selon l'âge et le sexe (suite)

[116] For 1947-1953, reason for discrepancy between sum of frequencies for male and female shown here and estimated total population shown elsewhere due to use of adjusted figures for births and migration; for 1959, reason for discrepancy not ascertained.

[116] Pour 1947-1953, l'écart relevé entre la somme des nombres indiqués pour les hommes et les femmes dans le présent tableau et le total estimatif de la population donné ailleurs est dû au fait que l'on a employé des chiffres corrigés pour les naissances et les migrations. Pour 1959, la raison de cet écart n'a pas été déterminée.

[117] Estimated from results of a sample survey covering approximately 20 per cent of households.

[118] Summation of frequencies for age groups gives totals of 39 980 for 1954 and 41 110 for 1955. Reason for discrepancies not ascertained.

[117] D'après les résultats d'une enquête par sondage couvrant approximativement 20 pour 100 des ménages.

[118] La somme des données pour les différents groupes d'âge est de 39 980 pour 1954 et de 41 110 pour 1955. On ne connaît pas la raison de ces écarts.

[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

Italics indicate estimates of questionable reliability.

[13] *De jure* population.

[117] Estimated from results of a sample survey covering approximately 20 per cent of households.

[120] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.

Italique : estimations de qualité douteuse.

[13] Population de droit.

[117] D'après les résultats d'une enquête par sondage couvrant approximativement 20 pour 100 des ménages.

[120] Population de droit effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement de 1 pour 100 pour sous-dénombrement.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[121] Population actually enumerated, i.e., excluding 8.4 per cent (227 866) adjustment for underenumeration and estimate of 87 000 for tribal Indian population.

[122] Excluding Indian jungle population numbering 45 249 for both sexes in 1950 and schedules not tabulated by age and sex numbering 16 713 in 1940 and 31 960 in 1950.

[123] Excluding Amerindian population, estimated at 21 156 in 1958.

[121] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement de 8,4 pour 100 (227 866) pour sous-dénombrement et de 87 000 (estimation) Indiens vivant en tribus.

[122] Non compris les Indiens de la jungle (45 249 pour les deux sexes en 1950) et les bulletins non classés par âge et par sexe (16 713 en 1940 et 31 960 en 1950).

[123] Non compris les Amérindiens : 21 156 (estimation) en 1958.

5. Population by age and sex (continued)

[2] Age classification based on year of birth rather than on completed years of age.

[123] Excluding Amerindian population, estimated at 21 156 in 1958.

[124] Population actually enumerated, i.e., excluding adjustment for under-enumeration estimated at 1.4 per cent in 1940 and 5.8 per cent in 1952.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[123] Non compris les Amérindiens : 21 156 (estimation) en 1958.

[124] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement pour sous-dénombrement estimé à 1,4 pour 100 en 1940 et à 5,8 pour 100 en 1952.

5. Population selon l'âge et le sexe (suite)

[125] Excluding adjustment for underenumeration estimated at 191 683 for both sexes and for indigenous population numbering 127 980 for both sexes.
[126] *De jure* population but excluding Indian jungle population.
[127] Excluding schedules not tabulated by age and sex, numbering 1 321.

[125] Compte non tenu d'un ajustement pour sous-dénombrement estimé à 191 683 pour les deux sexes et 127 980 indigènes des deux sexes.
[126] Population de droit, mais non compris les Indiens de la jungle.
[127] Non compris 1 321 bulletins non classés par âge et par sexe.

Italics indicate estimates of questionable reliability.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[87] For 46 years and over.

[128] Population actually enumerated, but excluding 12 881 schedules not tabulated by age and sex. Also excluding Indian jungle population numbering 17 000 for both sexes and adjustment for underenumeration estimated at 50 067 for both sexes.

[129] Enumerated population, i.e., excluding adjustment for Indian jungle population estimated at 350 000 for both sexes and underenumeration estimated at 465 144 for both sexes.

[130] Excluding Indian jungle population.

Italique : estimations de qualité douteuse.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[87] 46 ans et plus.

[128] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés par âge et par sexe. Non compris également 17 000 Indiens de la jungle (des deux sexes) et un ajustement pour sous-dénombrement estimé à 50 067 pour les deux sexes.

[129] Population dénombrée, c'est-à-dire compte non tenu des Indiens de la jungle estimés à 350 000 pour les deux sexes et d'un ajustement pour sous-dénombrement estimé à 465 144 pour les deux sexes.

[130] Non compris les Indiens de la jungle.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[131] Excluding Indian and Negro population living in tribes, estimated at 26 000 for both sexes in 1950 and 1955.
[132] Excluding Indian jungle population, numbering 100 600 for both sexes in 1941 and 56 705 in 1950.
[133] Excluding data for Perim.
[134] Excluding data for port, and military personnel.
[135] Excludes schedules not tabulated by sex, numbering 1 775 for both sexes.
[136] For 10-20 years.
[137] For 21-45 years.
[138] For 60-75 years.
[139] For 76 years and over.
[139a] Excluding alien armed forces, merchant seamen and foreign diplomatic personnel, but including civilian aliens.
[140] Excluding Allied military and civilian personnel and their dependants stationed in the area.

[131] Non compris les Indiens et les noirs vivant en tribus, estimés à 26 000 pour les deux sexes en 1950 et en 1955.
[132] Non compris les Indiens de la jungle, au nombre de 100 600 pour les deux sexes en 1941 et de 56 705 en 1950.
[133] Non compris Perim.
[134] Non compris le personnel portuaire et les militaires.
[135] Non compris les bulletins non classés par sexe (1 775 pour les deux sexes).
[136] 10 à 20 ans.
[137] 21 à 45 ans.
[138] 60 à 75 ans.
[139] 76 ans et plus.
[139a] Non compris les membres de forces armées étrangères, de la marine marchande et du corps diplomatique, mais y compris les civils étrangers.
[140] Non compris les militaires et les civils alliés en poste dans la région, ainsi que les personnes à leur charge les accompagnant.

Italics indicate estimates of questionable reliability.

* Provisional.

[141] *De jure* population in 252 towns, approximating the urban area of the Union; these are the results of the first stage of a multi-stage sample census.

[142] *De jure* population in 2 143 village tracts in Burma proper; these are the results of the second stage of a multi-stage sample census.

[143] Estimated from provisional results of a demographic sample survey in 3 460 villages, and supplementary administrative reports.

[144] Estimated from results of a demographic sample survey in 345 villages and supplementary administrative reports.

Italique : estimations de qualité douteuse.

* Données provisoires.

[141] Population de droit de 252 villes correspondant approximativement aux zones urbaines de l'Union; ces données sont les résultats du premier degré d'un recensement par sondage à plusieurs degrés.

[142] Population de droit de 2 143 villages de Birmanie proprement dite; ces données sont les résultats du deuxième degré d'un recensement par sondage à plusieurs degrés.

[143] Estimation établie d'après les résultats provisoires d'une enquête démographique par sondage effectuée dans 3 460 villages, et complétée au moyen de rapports administratifs.

[144] Estimation établie d'après les résultats d'une enquête démographique par sondage effectuée dans 345 villages et complétée au moyen de rapports administratifs.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[145] Excluding non-resident military and shipping personnel, together numbering 36 606 at 1946 census.

[146] Population actually enumerated; total, including 0.7 per cent adjustment for underenumeration is 8 154 580 for both sexes.

[147] Beginning 1950, excluding armed forces and foreigners. Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

[148] For Taiwanese nationals only, including those residents called into Japanese military service who might be abroad due to movements of military forces.

[149] Note suppressed.

[145] Non compris les militaires et agents des compagnies maritimes non résidants, soit 36 606 personnes au recensement de 1946.

[146] Population effectivement dénombrée; le total, compte tenu d'un ajustement de 0,7 pour 100 pour sous-dénombrement, est de 8 154 580 pour les deux sexes.

[147] A partir de 1950, non compris les militaires et les étrangers. Ce chiffre diffère légèrement des estimations correspondantes données ailleurs car il se rapporte à la moyenne des estimations de fin d'année et non à l'estimation au 1er juillet.

[148] Nationaux taïwanais seulement, y compris les résidents appelés à servir dans les forces armées japonaises qui pouvaient se trouver à l'étranger en raison des mouvements de troupes.

[149] Note supprimée.

* Provisional.

[150] Former British dependency declared independent 16 August 1960. Data exclude persons in military and special internment camps, numbering 12 422 at 1946 census.

[151] Excluding transients afloat and enemy prisoners of war numbering 822 and 1 394, respectively, at 1947 census. For 1947 census, also excludes non-locally domiciled service personnel and their families, and nomadic aborigines, numbering 12 519 and 29 648 (15 601 males, 14 047 females) respectively.

* Données provisoires.

[150] Ancienne possession britannique, proclamée indépendante le 16 août 1960. Non compris les personnes se trouvant dans des camps militaires et des camps d'internement spéciaux (12 422 au recensement de 1946).

[151] Non compris les personnes de passage à bord de navires et les prisonniers de guerre ennemis, soit respectivement 822 et 1 394 personnes lors du recensement de 1947. Pour le recensement de 1947, non compris également les fonctionnaires civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant, ainsi que les autochtones nomades, au nombre de 12 519 et de 29 648 (15 601 hommes et 14 047 femmes) respectivement.

5. Population selon l'âge et le sexe (suite)

[152] Excluding Kashmir-Jammu, the final status of which has not yet been determined, the part "B" tribal areas of Assam where census could not be taken, Andaman and Nicobar Islands, and settlements of Chandernagor, Karikal, Mahé, Pondichéry and Yanaon, but including Sikkim. Data are a smoothed age distribution based on a 10 per cent sample of *de jure* census returns.

[153] Note suppressed.

[154] Excluding nomad population, estimated at 250 000 for both sexes (male 130 0000, female 120 000).

[152] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, les régions tribales (partie "B") de l'Assam où aucun recensement n'a pu être effectué, les îles Andaman et Nicobar et les comptoirs de Chandernagor, Karikal, Mahé, Pondichéry et Yanaon, mais y compris Sikkim. Les chiffres indiqués sont une répartition par âge lissée fondée sur un échantillon de 10 pour 100 des bulletins du recensement de la population de droit.

[153] Note supprimée.

[154] Non compris les nomades (250 000 [estimation] pour les deux sexes, soit 130 000 hommes et 120 000 femmes).

* Provisional.

[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

* Données provisoires.

[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

Italics indicate estimates of questionable reliability.

* Provisional.

[13] *De jure* population.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[157] 1945-1952, excluding Tokara Archipelago, acquired from the Ryukyu Islands on 5 December 1951 (population 2 658 in 1955), and 1945-1954, the Amami Islands, acquired from the Ryukyu Islands on 25 December 1953 (population 205 363 in 1955); for 1940, including armed forces outside country (estimated at 1 200 000) and excluding 39 237 occidental foreigners within country; for 1945, excluding armed forces within country and foreigners; for 1946, excluding foreigners and Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated; for 1947, data adjusted for underenumeration due to flood conditions at time of census; beginning 1945, excluding Allied military and civilian personnel and their dependants stationed in the area.

Italique : estimations de qualité douteuse.

* Données provisoires.

[13] Population de droit.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[157] 1945-1952, non compris l'archipel des Tokara, détaché des Ryû-Kyû et rattaché au Japon le 5 décembre 1951 (2 658 habitants en 1955). 1945-1954, non compris les îles Amami, détachées des Ryû-Kyû le 25 décembre 1953 (205 363 habitants en 1955). Pour 1940, y compris les militaires hors du pays (estimés à 1 200 000) mais non compris 39 237 ressortissants de pays occidentaux se trouvant au Japon. Pour 1945, non compris les militaires dans le pays et les étrangers. Pour 1946, non compris les étrangers et les Coréens, les Formosans et les personnes originaires des Ryû-Kyû qui avaient déclaré leur intention de se faire rapatrier. Pour 1947, données corrigées en raison du sous-dénombrement provoqué par les inondations qui ont eu lieu à l'époque du recensement. A partir de 1945, non compris les militaires et les civils alliés en poste sur le territoire, ainsi que les personnes à leur charge les accompagnant.

5. Population selon l'âge et le sexe (suite)

[158] Summation of frequencies for age groups gives total of 37 487 236 for 1942 and 38 045 757 for 1943; reason for discrepancy not ascertained.

[159] For East Jordan only. Excluding refugees in camps, estimated at 19 000.

[158] La somme des données pour les différents groupes d'âge est de 37 487 236 pour 1942 et de 38 045 757 pour 1943; on ne connaît pas la raison de cet écart.

[159] Jordanie de l'Est seulement. Non compris les 19 000 (estimation) réfugiés vivant dans des camps.

Italics indicate estimates of questionable reliability.

[13] *De jure* population.

[32] For under 16 years.

[160] Excluding alien armed forces, civilian aliens employed by armed forces, foreign diplomatic personnel, and other foreigners (the latter numbering 23 988 at 1955 census). Prior to 1950, data relate to population in area south of the 38th parallel. For 1948, age and sex distribution based on tabulation of 1947 police registration. For 1955, the distribution by age was derived from a one per cent sample of census returns. For 1957–1959, data also exclude all armed forces, prisoners and ship-crews.

[161] Excluding Bedouin population numbering 15 679 for both sexes.

[162] For 16-29 years.

Italique : estimations de qualité douteuse.

[13] Population de droit.

[32] Moins de 16 ans.

[160] Non compris les militaires étrangers, les civils étrangers employés par les forces armées et le personnel diplomatique étranger, ainsi que les autres étrangers (ces derniers étaient au nombre de 23 988 au recensement de 1955). Pour les années antérieures à 1950, les données se rapportent à la population du territoire situé au sud du 38ème parallèle. Pour 1948, répartition par âge et par sexe fondée sur une analyse des déclarations de police de 1947. Pour 1955, la répartition par âge a été tirée d'un échantillon de 1 pour 100 des bulletins de recensement. Pour 1957–1959, non compris les militaires, les prisonniers et les équipages de navires, quels qu'ils soient.

[161] Non compris les Bédouins, au nombre de 15 679 pour les deux sexes.

[162] 16 à 29 ans.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[163] Data are a smoothed age distribution based on population enumerated in 1952 and 1954, corrected for underenumeration of children (103 000 for both sexes), and increased by 1.0326 per cent representing the effect on total population of estimated growth of 3 eastern regions between 1952 and 1954.

[164] Excluding transients and members of the British armed forces, numbering 1 442 and 66, respectively, for both sexes.

[165] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Junagadh, Manavadar, Gilgit, Baltistan and the port and peninsula of Gwadar acquired from Muscat and Oman on 8 September 1958. Also excludes an estimated 1 755 152 persons in Frontier Regions only partially covered by census, foreigners numbering 206 669 for both sexes and adjustment for underenumeration in urban areas amounting to 5 per cent or 393 166 for both sexes.

[163] Répartition par âge lissée fondée sur la population dénombrée en 1952 et en 1954, corrigée pour tenir compte du sous-dénombrement des enfants (103 000 pour les deux sexes) et majorée de 1,0326 pour 100 pour tenir compte des effets, sur la population totale, de l'accroissement estimatif de la population qui serait intervenu de 1952 à 1954 dans les trois régions orientales.

[164] Non compris les personnes de passage et les militaires britanniques (1 442 et 66, respectivement, pour les deux sexes).

[165] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le Junagadh, le Manavadar, le Gilgit, le Baltistan, ainsi que le port et la péninsule de Gwadar cédés par Mascate et Oman le 8 septembre 1958. Non compris également les habitants des régions frontalières partiellement recensés (estimés à 1 755 152), 206 669 étrangers des deux sexes et compte tenu d'un ajustement pour sous-dénombrement dans les régions urbaines correspondant à 5 pour 100 ou à 393 166 pour les deux sexes.

Italics indicate estimates of questionable reliability.

[2] Age classification based on year of birth rather than on completed years of age.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[166] Territory formerly under British mandate. Data are for Moslem population only, excluding Bedouin population. For Jewish population, see Israel.

[167] Estimated from the Philippines Statistical Survey of Households.

[168] For under 13 years.

[169] For 13-18 years.

[170] For 19 years and over.

Italique : estimations de qualité douteuse.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[166] Ancien mandat britannique. Population musulmane seulement, non compris les Bédouins. Pour la population juive, voir Israël.

[167] D'après l'enquête statistique des Philippines sur les ménages.

[168] Moins de 13 ans.

[169] 13 à 18 ans.

[170] 19 ans et plus.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

Italics indicate estimates of questionable reliability.

* Provisional.

[2] Age classification based on year of birth rather than on completed years of age.

[171] Data for 1940 and 1944 are for Okinawa Prefecture only; for 1940, include military personnel but exclude foreigners; 1944, exclude military personnel and foreigners; 1947, data were compiled from those figures enumerated by city, town and village governments, and include Tokara Archipelago (population 2 658 in 1955) and Amami Islands (population 205 363 in 1955) which reverted to Japan on 5 December 1951 and 25 December 1953 respectively; 1950, for Ryukyuan nationals only; 1952, including Amami Islands. Beginning 1947, data exclude Allied military and civilian personnel and their dependants stationed in the area.

Italique : estimations de qualité douteuse.

* Données provisoires.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[171] 1940 et 1944 : préfecture d'Okinawa seulement; 1940 : y compris les militaires mais non compris les étrangers; 1944 : non compris les militaires et les étrangers; 1947 : d'après les effectifs dénombrés par les autorités municipales (villes et villages) et compte tenu de l'archipel des Tokara (2 658 habitants en 1955) et des îles Amami (205 363 habitants en 1955) qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement; 1950 : nationaux des îles Ryû-Kyû seulement 1952 : y compris les îles Amami. A partir de 1947 : non compris les militaires et les civils alliés en poste sur le territoire, ainsi que les personnes à leur charge les accompagnant.

[172] Excluding non-locally domiciled military and civilian services personnel and their dependants, together numbering 25 860 in 1947 and 27 299 in 1957; also excluding transients afloat, numbering 2 638 in 1947 and 3 466 in 1957; data for 1947 also exclude 7 517 enemy prisoners of war.

[173] Including Christmas and Cocos (Keeling) Islands.

[174] Estimated from results of a demographic and economic sample survey covering 2 241 villages and 64 large municipalities; total is subject to error of ± 1.58 per cent.

[175] Distribution based on 2.5 per cent sample of census returns.

[172] Non compris les militaires et les fonctionnaires civils domiciliés en dehors du territoire, ainsi que les personnes à leur charge les accompagnant, soit au total 25 860 personnes en 1947 et 27 299 en 1957; non compris également les personnes de passage à bord de navires (2 638 en 1947 et 3 466 en 1957); les chiffres de 1947 ne tiennent pas compte de 7 517 prisonniers de guerre ennemis.

[173] Y compris les îles Christmas et Cocos (Keeling).

[174] D'après les résultats d'une enquête démographique et économique par sondage qui a porté sur 2 241 villages et 64 grandes municipalités; le total comporte une marge d'erreur de ± 1,58 pour 100.

[175] Répartition fondée sur un échantillon de 2,5 pour 100 des bulletins de recensement.

5. Population by age and sex (continued)

[13] *De jure* population.
[65] Because of rounding, totals are not in all cases the sum of the parts.

[13] Population de droit.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

* Provisional.
[65] Because of rounding, totals are not in all cases the sum of the parts.
[78] Excluding armed forces.

* Données provisoires.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.
[78] Non compris les militaires.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

* Provisional.

[2] Age classification based on year of birth rather than on completed years of age.

[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

[179] Prior to 1950, Finnish nationals in Finland only; beginning 1951 population present in area, including Finnish nationals temporarily outside country.

[180] Excluding alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country, and prisoners of war (estimated at 663 000 in 1946 and 486 000 in 1947); 1940-1945, excluding all armed forces outside country but beginning 1946, only members of career military service except those on duty in Germany or Austria. Including merchant seamen at sea; beginning 1946, military conscripts wherever stationed and all personnel on duty in Germany and Austria and their dependants, together estimated at 312 000 in 1946 and 186 500 (excluding estimate for merchant seamen, who were included in 1954 enumeration) in 1954. Also including civilian residents temporarily outside country.

* Données provisoires.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.

[179] Pour les années antérieures à 1950, nationaux finlandais se trouvant en Finlande seulement; à partir de 1951, population présente y compris les Finlandais temporairement hors du pays.

[180] Non compris les militaires et le personnel diplomatique étranger dans le pays, le personnel diplomatique français hors du pays et les prisonniers de guerre (estimés à 663 000 en 1946 et à 86 000 en 1947); 1940-1945 : non compris l'ensemble des militaires hors du pays, mais à partir de 1946, non compris seulement les militaires de carrière à l'exception de ceux des troupes d'occupation en Allemagne et en Autriche. Y compris les équipages de marine marchande en mer et, à partir de 1946, les militaires du contingent où qu'ils se trouvent, ainsi que tous les civils et militaires en occupation en Allemagne et en Autriche avec les personnes à leur charge les accompagnant, soit au total un effectif estimatif de 312 000 en 1946 et de 186 500 (non compris le nombre estimatif des marins de commerce qui avaient été compris dans le recensement de 1954) en 1954. Y compris également les civils résidents, temporairement hors du pays.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[181] Excluding estimates for Bas-Rhin, Haut-Rhin and Moselle. For 1943-1944, also excluding estimate for Corsica.

[182] Excluding communes of Tende and Brigue (population 2 848 at 1954 census) ceded by Italy in 1947, and an estimated 663 000 prisoners of war. Except for under 1 year age group, age classification based on year rather than on completed years of age.

[183] Age classification based on a 5 per cent sample of census returns.

[181] Non compris la population estimative du Bas-Rhin, du Haut-Rhin et de la Moselle. Pour 1943 et 1944, non compris la population estimative de la Corse.

[182] Non compris les communes de Tende et de Brigue (2 848 habitants au recensement de 1954) cédées par l'Italie en 1947, et quelque 663 000 prisonniers de guerre (estimation). A l'exception du groupe "moins de 1 an", la répartition par âge est fondée sur l'année de naissance et non sur le nombre d'années révolues.

[183] Répartition par âge fondée sur un échantillon de 5 pour 100 des bulletins de recensement.

5. Population by age and sex (continued)

* Provisional.
[2] Age classification based on year of birth rather than on completed years of age.
[4] For 15-20 years.
[5] For 21-24 years.
[13] *De jure* population.
[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.
[75] For 1-5 years.
[180] Excluding alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country, and prisoners of war (estimated at 663 000 in 1946 and 486 000 in 1947); 1940-1945, excluding all armed forces outside country but beginning 1946, only members of career military service except those on duty in Germany or Austria. Including merchant seamen at sea; beginning 1946, military conscripts wherever stationed and all personnel on duty in Germany and Austria and their dependants, together estimated at 312 000 in 1946 and 186 500 (excluding estimate for merchant seamen, who were included in 1954 enumeration) in 1954. Also including civilian residents temporarily outside country.

* Données provisoires.
[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.
[4] 15-20 ans.
[5] 21-24 ans.
[13] Population de droit.
[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.
[75] 1-5 ans.
[180] Non compris les militaires et le personnel diplomatique étranger dans le pays, le personnel diplomatique français hors du pays et les prisonniers de guerre (estimés à 663 000 en 1946 et à 86 000 en 1947); 1940-1945 : non compris l'ensemble des militaires hors du pays, mais à partir de 1946, non compris seulement les militaires de carrière à l'exception de ceux des troupes d'occupation en Allemagne et en Autriche. Y compris les équipages de marine marchande en mer et, à partir de 1946, les militaires du contingent où qu'ils se trouvent, ainsi que tous les civils et militaires en occupation en Allemagne et en Autriche avec les personnes à leur charge les accompagnant, soit au total un effectif estimatif de 312 000 en 1946 et de 186 500 (non compris le nombre estimatif des marins de commerce qui avaient été compris dans le recensement de 1954) en 1954. Y compris également les civils résidents, temporairement hors du pays.

5. Population selon l'âge et le sexe (suite)

[181] Excluding estimates for Bas-Rhin, Haut-Rhin and Moselle. For 1943-1944, also excluding estimate for Corsica.

[182] Excluding communes of Tende and Brigue (population 2 848 at 1954 census) ceded by Italy in 1947, and an estimated 663 000 prisoners of war. Except for under 1 year age group, age classification based on year rather than on completed years of age.

[183] Age classification based on a 5 per cent sample of census returns.

[184] British, French, US and USSR zones of occupation, including Berlin. *De jure* population (except in Bremen), including prisoners of war, civilian internees, and refugees in transit camps, together numbering 384 323.

[185] Including prisoners of war, civilian internees and refugees in transit camps together numbering 133 327.

[186] Including population of East Berlin.

[186a] For 6-9 years.

[181] Non compris la population estimative du Bas-Rhin, du Haut-Rhin et de la Moselle. Pour 1943 et 1944, non compris la population estimative de la Corse.

[182] Non compris les communes de Tende et de Brigue (2 848 habitants au recensement de 1954) cédées par l'Italie en 1947, et quelque 663 000 prisonniers de guerre (estimation). A l'exception du groupe "moins de 1 an", la répartition par âge est fondée sur l'année de naissance et non sur le nombre d'années révolues.

[183] Répartition par âge fondée sur un échantillon de 5 pour 100 des bulletins de recensement.

[184] Zones d'occupation américaine, britannique, française et soviétique, y compris Berlin. Population de droit (sauf Brême), y compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 384 323.

[185] Y compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 133 327.

[186] Y compris Berlin-Est.

[186a] 6-9 ans.

5. Population by age and sex (continued)

[13] *De jure* population.
[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.
[65] Because of rounding, totals are not in all cases the sum of the parts.
[187] Estimates are "average" annual population.
[188] Prior to 1953, excluding the Saar.

[13] Population de droit.
[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.
[187] Population annuelle "moyenne".
[188] Pour les années antérieures à 1953, non compris la Sarre.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[189] *De jure* population except for Bremen. Including prisoners of war, civilian internees, and refugees in transit camps, together numbering 247 240.
[190] Estimates exclude armed forces and displaced persons.
[191] Excluding prisoners of war, civilian internees and refugees in transit camps, together numbering 3 756.
[192] Estimates are "average" annual population, except for 1954 and 1955, which are means of end year population.

[189] Population de droit, sauf Brême. Y compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 247 240.
[190] Non compris les militaires et les personnes déplacées.
[191] Non compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 3 756.
[192] Population annuelle "moyenne" sauf 1954 et 1955 où il s'agit de la moyenne en fin d'année.

5. Population by age and sex (continued)

[See note at head of table.]

Italics indicate estimates of questionable reliability.

[2] Age classification based on year of birth rather than on completed years of age.

[13] De *jure* population.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[78] Excluding armed forces.

[190] Estimates exclude armed forces and displaced persons.

[192] Estimates are "average" annual population, except for 1954 and 1955, which are means of end year population.

Italique : estimations de qualité douteuse.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.

[13] Population de droit.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[78] Non compris les militaires.

[190] Non compris les militaires et les personnes déplacées.

[192] Population annuelle "moyenne" sauf 1954 et 1955 où il s'agit de la moyenne en fin d'année.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[193] Excluding 1 439 members of families of armed forces, and 1 179 persons accommodated in harbour shipping.

[194] Including armed forces stationed outside country, but excluding alien armed forces stationed in the area.

[195] Excluding population of Dodecanese, acquired from Italy in October 1947 (population 115 343 at time of transfer).

[196] Unadjusted estimates, based on last census and vital statistics, but not taking account of migration.

[193] Non compris 1 439 membres des familles de militaires et 1 179 personnes logées à bord de navires dans les ports.

[194] Y compris les militaires en garnison hors du pays, mais non compris les militaires étrangers en garnison sur le territoire.

[195] Non compris la population du Dodécanèse cédé par l'Italie en octobre 1947 (115 343 habitants à l'époque).

[196] Estimations non ajustées, d'après le dernier recensement et les registres de l'état civil, mais compte non tenu de la migration.

Italics indicate estimates of questionable reliability.
* Provisional.
[13] *De jure* population.
[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.

Italique : estimations de qualité douteuse.
* Données provisoires.
[13] Population de droit.
[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[65] Because of rounding, totals are not in all cases the sum of the parts.

[197] Estimates prior to 1959 not revised to accord with the results of census of 1 January 1960.

[198] Total population derived from the 1956 census, but the age distribution is estimated.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[197] Les estimations des années antérieures à 1959 n'ont pas été revisées pour concorder avec les résultats du recensement du 1er janvier 1960.

[198] Population totale tirée du recensement de 1956, mais répartition par âge estimative.

5. Population by age and sex (continued)

[2] Age classification based on year of birth rather than on completed years of age.
[13] *De jure* population.
[32] For under 16 years.
[65] Because of rounding, totals are not in all cases the sum of the parts.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.
[13] Population de droit.
[32] Moins de 16 ans.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[2] Age classification based on year of birth rather than on completed years of age.
[13] *De jure* population.

[2] Répartition par âge fondée sur l'année de naissance plutôt que sur le nombre d'années révolues.
[13] Population de droit.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[39] Differs slightly from corresponding estimates shown elsewhere because refers to mean of end-year estimates rather than to estimate as of 1 July.
[65] Because of rounding, totals are not in all cases the sum of the parts.
[203] Prior to 1955, estimates are unrevised.

[39] Ce chiffre s'écarte légèrement des estimations correspondantes données ailleurs car il s'agit d'une moyenne des estimations de fin d'année et non d'une estimation au 1er juillet.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.
[203] Pour les années antérieures à 1955, estimations non revisées.

5. Population by age and sex (continued)

[17] For under 18 years.
[18] For 18-59 years.
[203] Prior to 1955, estimates are unrevised.
[204] Excludes persons not tabulated by age and sex, numbering 394 495.
[205] Excludes 6 000 persons not tabulated by sex and age.

[17] Moins de 18 ans.
[18] 18 à 59 ans.
[203] Pour les années antérieures à 1955, estimations non revisées.
[204] Non compris les personnes non classées par âge et par sexe (394 495).
[205] Non compris 6 000 personnes non classées par sexe et par âge.

5. Population by age and sex (continued)

[65] Because of rounding, totals are not in all cases the sum of the parts.
[206] For under 7 years.
[207] For 45-60 years.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.
[206] Moins de 7 ans.
[207] 45 à 60 ans.

5. Population by age and sex (continued)

[See note at head of table.]

[13] *De jure* population.
[65] Because of rounding, totals are not in all cases the sum of the parts.

[13] Population de droit.
[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

[208] Except for the 1951 census, data include armed forces outside country and merchant seamen at sea but exclude enemy prisoners of war and Commonwealth and alien armed forces stationed in the area.

[208] A l'exception du recensement de 1951, les chiffres comprennent les militaires à l'étranger, les marins de commerce en mer, mais non les prisonniers de guerre ennemis et les militaires des pays du Commonwealth et des pays étrangers en garnison sur le territoire.

5. Population by age and sex (continued)

* Provisional.

[208] Except for the 1951 census, data include armed forces outside country and merchant seamen at sea but exclude enemy prisoners of war and Commonwealth and alien armed forces stationed in the area.

* Données provisoires.

[208] A l'exception du recensement de 1951, les chiffres comprennent les militaires à l'étranger, les marins de commerce en mer, mais non les prisonniers de guerre ennemis et les militaires des pays du Commonwealth et des pays étrangers en garnison sur le territoire.

5. Population selon l'âge et le sexe (suite)

[Voir note au début du tableau.]

* Provisional.

[13] *De jure* population.

[65] Because of rounding, totals are not in all cases the sum of the parts.

[210] Prior to 1947, civilian *de facto* population, i.e., excluding armed forces and merchant seamen at sea. For 1947-1949, including armed forces stationed outside country and merchant seamen at sea; for 1950, including merchant seamen but excluding armed forces outside country.

* Données provisoires.

[13] Population de droit.

[65] Les chiffres ayant été arrondis, les totaux ne coincident pas toujours avec la somme des données partielles.

[210] Pour les années antérieures à 1947, population civile de fait, c'est-à-dire non compris les militaires et les marins de commerce en mer. 1947-1949 : y compris les militaires en garnison hors du pays et les marins de commerce en mer. 1950 : y compris les marins de commerce mais non compris les militaires hors du pays.

5. Population selon l'âge et le sexe (suite)

Italics indicate estimates of questionable reliability.
* Provisional.
[75] For 1-5 years.
[215] Excluding armed forces outside country, numbering 2 182 at 1956 census, prisoners of war and alien armed forces stationed within country.
[216] For 6-10 years.
[217] For 11-14 years.

Italique : estimations de qualité douteuse.
* Données provisoires.
[75] 1 à 5 ans.
[215] Non compris les militaires hors du pays (2 182 au recensement de 1956), les prisonniers de guerre et les militaires étrangers en garnison dans le pays.
[216] 6 à 10 ans.
[217] 11 à 14 ans.

6. Enumerated population by sex and intercensal rates of increase for both sexes — Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes entre recensements consécutifs : 1900-1961

[Rates are the average annual percentage increases from date of last previous census or survey, calculated by the compound interest formula. A negative increase, i.e., a decrease, is denoted by a minus sign (—) preceding the rate. For discussion, see page 31. — Les taux représentent le pourcentage d'accroissement annuel depuis le dernier recensement ou la dernière enquête, obtenu en appliquant la formule des intérêts composés. Un accroissement négatif, c'est-à-dire une diminution, est indiqué par le signe moins (—) placé avant le taux. Voir explication à la page 80.]

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[3] Population actually enumerated but excluding persons in institutions (42 917), personnel in military establishments (53 374), merchant seamen (872), armed forces and diplomatic personnel stationed outside country, and some of the Moslem workers in France.

[4] Rounded figure; return in units not available.

[5] Second series: including nomad population estimated at 20 000 in 1946, the population of the headquarters of administration located at Mafeking in the Union of South Africa, and other civilian nationals working outside Territory, numbering 282 and 14 119 respectively at 1946 census.

[6] Reason for slight discrepancy between sum of figures shown here and corresponding total shown elsewhere not ascertained.

[7] African population only.

[8] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.

[9] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[3] Population effectivement dénombrée, mais non compris les personnes vivant dans des institutions (42 917), les militaires dans les établissements militaires (53 374), les marins de commerce (872), les militaires et le personnel diplomatique en poste hors du pays, ainsi que certains travailleurs musulmans en France.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[5] Deuxième série : y compris la population nomade (estimée à 20 000 en 1946), la population du centre administratif (Mafeking) situé dans l'Union sud-africaine, et d'autres nationaux civils travaillant hors du territoire (282 et 14 119 respectivement au recensement de 1946).

[6] On ne connaît pas la raison pour laquelle la somme des chiffres donnés ici s'écarte légèrement du total correspondant indiqué ailleurs.

[7] Population africaine seulement.

[8] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.

[9] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[9] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.

[10] Formerly Belgian Congo; declared independent 30 June 1960.

[11] White population only.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[13] Colony only.

[14] Data are estimates, based on final results of 1955 demographic sample survey covering approximately 300 000 persons.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[9] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.

[10] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.

[11] Population blanche seulement.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[13] Colonie seulement.

[14] Estimations fondées sur les résultats définitifs de l'enquête démographique par sondage de 1955 qui a porté sur 300 000 personnes environ.

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[15] Excluding non-African armed forces, 4 137 persons in transit and 188 Polish refugees in camps; including an estimate of 219 000 for both sexes for population of Northern Frontier Provinces and parts of Rift Valley only partially covered by census.

[16] Excluding alien armed forces stationed in the area.

[17] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

[18] First series: excluding dependencies.

[19] Reliability of results affected by hurricane which occurred three weeks before date of census.

[20] Indigenous population only.

[21] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development as measured by educational level, language and mode of living.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[15] Non compris les militaires non africains, 4 137 personnes de passage et 188 réfugiés polonais vivant dans les camps; y compris 219 000 (estimation) habitants des deux sexes des Provinces de la Frontière du Nord et de certaines parties de la vallée du Rift qui n'ont été que partiellement recensés.

[16] Non compris les militaires étrangers en garnison sur le territoire.

[17] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.

[18] Première série : non compris les dépendances.

[19] L'exactitude des résultats a été compromise par la tempête qui a fait rage trois semaines avant le recensement.

[20] Population indigène seulement.

[21] Population remplissant certaines conditions fixées par la loi, c.à.d. ayant atteint un degré de développement matériel et social déterminé par le niveau d'instruction, la langue parlée et le mode de vie.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[27] Excludes approximately 700 men in military service in East Africa and the Middle East.

[28] Created 1 July 1960 by the union of former British Somaliland with the former Italian Trust Territory of Somaliland, which were declared independent 26 June and 1 July 1960, respectively.

[29] For former Italian Somaliland only; census of non-indigenous population of former British Somaliland gave total of 2 683 on 26 April 1931, and for former Italian Somaliland a total of 5 050 on 4 November 1953.

[30] Including data for Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa (population 3 329 in 1951).

[31] Data are population enumerated in Police Zone plus an estimate for natives and Coloured (mixed) population living outside Police Zone (77 383 males and 106 450 females in 1946 and 99 465 males and 128 311 females in 1951).

[32] Formerly known as Spanish Guinea, and comprising African Provinces of Fernando Póo and Rio Muni.

[33] Results of sample census of population covering 1 700 000 persons, representing 10 per cent of rural and nomad population and 100 per cent of that in 68 towns.

[34] Population actually enumerated, excluding adjustment for underenumeration estimated at 8 per cent for both sexes.

[35] Excluding non-African armed forces; for 1948, also excluding 5 397 Polish refugees in camps.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[27] Non compris quelque 700 militaires en Afrique orientale et au Moyen-Orient.

[28] Créée, le 1er juillet 1960, par la réunion de l'ancienne Somalie britannique et de l'ancien Territoire sous tutelle de la Somalie sous administration italienne qui ont été proclamés indépendants le 26 juin et le 1er juillet 1960 respectivement.

[29] Ancienne Somalie italienne seulement; le recensement de la population non indigène de l'ancienne Somalie britannique a donné un total de 2 683 au 26 avril 1931, tandis que le chiffre correspondant dans l'ancienne Somalie italienne était de 5 050 au 4 novembre 1953.

[30] Y compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[31] Population dénombrée dans la Zone de police, plus 77 383 hommes et 106 450 femmes (estimation) en 1946 et 99 465 hommes et 128 311 femmes (estimation) en 1951, indigènes et de couleur (métis) vivant en dehors de la Zone.

[32] Anciennement Guinée espagnole; provinces africaines de Fernando Póo et Rio Muni.

[33] Résultats d'un recensement par sondage de la population ayant porté sur 1 700 000 personnes, soit 10 pour 100 de la population rurale et de la population nomade et 100 pour 100 de la population de 68 villes.

[34] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement estimé à 8 pour 100 pour les deux sexes.

[35] Non compris les militaires non africains; pour 1948, non compris également 5 397 réfugiés polonais vivant dans des camps.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[36] Formerly Togoland, a United Nations Trust Territory under French Administration; declared independent 27 April 1960.

[37] Excluding Algerian refugees temporarily in the country.

[38] Excluding non-African armed forces; for 1948, also excluding 209 persons in transit and 4 020 Polish refugees in camps.

[39] Excluding data for Walvis Bay, which is an integral part of the Union but is administered as if it were part of South West Africa (population 3 329 in 1951).

[40] Includes armed forces outside country and excludes enemy prisoners of war within country.

[41] Excluding nomad population, numbering 97 381 in 1907, 32 663 in 1917, 40 000 in 1927, 12 000 in 1937 and 55 073 in 1947; for 1947, also excluding enemy prisoners of war and alien armed forces within country.

[42] Excluding persons in transit and Polish refugees in camps.

[43] Excluding tourists and members of UK and US armed forces and their dependants stationed in the area.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[36] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.

[37] Non compris les réfugiés algériens temporairement dans le pays.

[38] Non compris les militaires non africains; pour 1948, non compris également 209 personnes de passage et 4 020 réfugiés polonais dan des camps.

[39] Non compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[40] Y compris les militaires hors du pays, mais non compris les prisonniers de guerre ennemis dans le pays.

[41] Non compris la population nomade, soit 97 381 en 1907, 32 663 en 1917, 40 000 en 1927, 12 000 en 1937 et 55 073 en 1947; pour 1947, non compris également les prisonniers de guerre ennemis et les militaires étrangers dans le pays.

[42] Non compris les personnes de passage et les réfugiés polonais vivant dans des camps.

[43] Non compris les touristes et les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire, ainsi que les personnes à leur charge les accompagnant.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.
[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.
[2] *De jure* population.
[44] First series: excluding Newfoundland, which became the 10th province on 1 April 1949.
[45] Excludes 1 377 residents of Labrador not classified by sex.
[46] *De jure* population, but including armed forces stationed in the area.
[47] Note suppressed.
[48] Second series: *de jure* population.
[49] Rates of increase not computed because censuses prior to 1954 were stated to be grossly overenumerated.
[50] Population held to be overstated by approximately 1 000 000 for both sexes.
[51] Rate for period 2 August 1921-18 April 1950.
[52] *De jure* population but excluding diplomatic personnel stationed outside country, numbering 84 for both sexes.

* Provisoire.
[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.
[2] Population de droit.
[44] Première série : non compris Terre-Neuve qui est devenue la dixième province le 1er avril 1949.
[45] Non compris 1 377 résidents du Labrador non classés par sexe.
[46] Population de droit, mais y compris les militaires en garnison sur le territoire.
[47] Note supprimée.
[48] Deuxième série : population de droit.
[49] Taux d'accroissement non calculés parce que les résultats des recensements antérieurs à celui de 1954 ont été déclarés très exagérés.
[50] Chiffre considéré comme supérieur de 1 000 000 environ à la réalité pour les deux sexes.
[51] Taux pour la période du 2 août 1921 au 18 avril 1950.
[52] Population de droit, mais non compris le personnel diplomatique en poste hors du pays (84 pour les deux sexes).

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.
[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.
[2] *De jure* population.
[46] *De jure* population, but including armed forces stationed in the area.
[48] Second series: *de jure* population.
[49] Rates of increase not computed because censuses prior to 1954 were stated to be grossly overenumerated.
[53] Prior to 1940, rates unreliable because exact area covered by censuses unknown.
[54] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 4.3 per cent for both sexes.
[55] Note suppressed.
[56] Totals for male and female population include adjustment for underenumeration which is believed to be too high. Rate of increase computed on population actually enumerated.
[57] First series: *de jure* population.
[58] Except for 1930, excluding tribal Indian population, numbering 47 204 in 1911, 61 629 in 1920, 55 987 in 1940 and 48 654 in 1950. Also excluding Canal Zone, shown separately above.
[59] Including adjustment to conform data with 1940 census definition of *poblacion civil*, i.e., population excluding tribal Indians.
[60] Including estimates for provinces of Chirique and Veraguas.

* Provisoire.
[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.
[2] Population de droit.
[46] Population de droit, mais y compris les militaires en garnison sur le territoire.
[48] Deuxième série : population de droit.
[49] Taux d'accroissement non calculés parce que les résultats des recensements antérieurs à celui de 1954 ont été déclarés très exagérés.
[53] Pour les années antérieures à 1940, taux d'exactitude douteuse parce qu'on ne connaît pas les limites précises du territoire couvert par les recensements.
[54] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 4,3 pour 100 pour les deux sexes.
[55] Note supprimée.
[56] On a appliqué aux totaux de la population un ajustement pour sous-dénombrement qui semble exagéré. Taux d'accroissement calculé d'après la population effectivement dénombrée.
[57] Première série : population de droit.
[58] Sauf pour 1930, non compris les Indiens vivant en tribus, soit 47 204 en 1911, 61 629 en 1920, 55 987 en 1940 et 48 654 en 1950. Non compris également la Zone du canal à laquelle est consacrée une rubrique spéciale un peu plus haut.
[59] Compte tenu d'un ajustement visant à accorder ce chiffre avec la définition de la *poblacion civil* du recensement de 1940, c.à.d. population non compris les Indiens vivant en tribus.
[60] Y compris des estimations pour les provinces de Chirique et de Veraguas.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[46] *De jure* population, but including armed forces stationed in the area.

[61] *De jure* population, but excluding members of the armed forces overseas, estimated at 680 000 in 1960.

[62] Prior to 1950, including population of Midway Islands, numbering, for both sexes, 35 in 1910, 31 in 1920, 36 in 1930 and 437 in 1940. For 1940, also including population of Baker, Canton and Enderbury, Howland, Jarvis, Johnston and Sand, numbering 123 for both sexes, previously included in enumeration of Hawaii.

[63] Population actually enumerated, excluding adjustment for net underenumeration estimated to be at least 2.5 per cent (3 800 000) for both sexes.

[64] Estimated from results of a sample survey covering approximately 20 per cent of households.

[65] Estimated from results of a demographic sample survey covering approximately 5 per cent of households in Kingston Metropolitan Area and 10 per cent of households in rural areas.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[46] Population de droit, mais y compris les militaires en garnison sur le territoire.

[61] Population de droit, mais non compris les militaires à l'étranger, estimés à 680 000 en 1960.

[62] Pour les années antérieures à 1950, y compris la population des îles Midway, soit pour les deux sexes 35 en 1910, 31 en 1920, 36 en 1930 et 437 en 1940. Pour 1940, y compris également la population des îles Baker, Canton et Enderbury, Howland, Jarvis, Johnston et Sand, soit au total 123 pour les deux sexes, précédemment comprise dans le chiffre d'Hawaii.

[63] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement net estimé à 2,5 pour 100 (3 800 000) au moins pour les deux sexes.

[64] Estimation d'après les résultats d'une enquête par sondage ayant couvert environ 20 pour 100 des ménages.

[65] Estimation d'après les résultats d'une enquête démographique par sondage ayant couvert environ 5 pour 100 des ménages dans la zone métropolitaine de Kingston et 10 pour 100 des ménages dans les régions rurales.

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[64] Estimated from results of a sample survey covering approximately 20 per cent of households.

[66] First series: population actually enumerated. Second series: including adjustment for underenumeration, estimated at 1.5 per cent in 1914 and 1 per cent in 1947 for both sexes.

[67] Excluding Indian jungle population, estimated at 38 425.

[68] First series: territory as of date of census, not including adjustment for territories transferred to Argentina, Brazil, Chile and Paraguay. Data for 1900 include 5 per cent adjustment for underenumeration; population actually enumerated numbered 1 555 818. Second series: present territory, including adjustments for territorial changes and for omissions and underenumeration, estimated at 5 per cent in 1900 and 8.4 per cent in 1950. Also including estimates for tribal Indian population of 91 000 in 1900 and 87 000 in 1950.

[69] Excluding Indian jungle population, numbering 45 249 in 1950. First series: excluding territory acquired from Bolivia in 1903 and Colombia in 1907. Third series: *de jure* population.

[70] Data believed to be overstated.

[71] Excludes schedules not tabulated by sex, numbering 16 713 in 1940 and 31 960 in 1950.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[64] Estimation d'après les résultats d'une enquête par sondage ayant couvert environ 20 pour 100 des ménages.

[66] Première série : population effectivement dénombrée. Deuxième série : compte tenu d'un ajustement pour sous-dénombrement estimé à 1,5 pour 100 et à 1 pour 100 pour les deux sexes en 1914 et en 1947 respectivement.

[67] Pour 1914, non compris les Indiens de la jungle estimés à 38 425.

[68] Première série : territoire à la date du recensement, compte non tenu d'un ajustement pour les territoires cédés à l'Argentine, au Brésil, au Chili et au Paraguay. Pour 1900, compte tenu d'un ajustement de 5 pour 100 pour sous-dénombrement; population effectivement dénombrée : 1 155 818. Deuxième série : territoire actuel, compte tenu d'ajustements pour les modifications territoriales survenues, ainsi que pour les omissions et le sous-dénombrement estimés à 5 pour 100 en 1900 et à 8,4 pour 100 en 1950. Compte tenu également des Indiens vivant en tribus, estimés à 91 000 en 1900 et à 87 000 en 1950.

[69] Non compris les Indiens de la jungle (45 249 en 1950). Première série : non compris les territoires cédés par la Bolivie en 1903 et la Colombie en 1907. Troisième série : population de droit.

[70] Chiffre vraisemblablement exagéré.

[71] Non compris les bulletins non classés par sexe (16 713 en 1940 et 31 960 en 1950).

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[49] Rates of increase not computed because censuses prior to 1954 were stated to be grossly overenumerated.

[72] First series: population actually enumerated. Second series: including adjustments for omissions and underenumeration.

[73] Excludes population for *departmento* of Arica not tabulated by sex, numbering 9 704 in 1907 and 15 348 in 1920.

[74] Excludes tribal Indian population not tabulated by sex, numbering 94 000 in 1912 and 158 428 in 1918.

[75] Includes adjustment for underenumeration, estimated at 191 683 for both sexes.

[76] *De jure* population, but excluding Indian jungle population.

[77] Including dependencies.

[78] Excluding penal, military and tribal Indian population, together numbering 7 050 in 1936.

[79] Data stated to cover less than the total population; extent of population enumerated not ascertained.

[80] Population actually enumerated, but excluding 12 881 schedules not tabulated by sex. Also excluding Indian jungle population estimated at 17 000 and an adjustment for underenumeration of 50 067.

[81] Population actually enumerated; total, including an adjustment of 465 144 for underenumeration and 350 000 for Indian jungle population, is 7 023 111 for both sexes.

[82] Excluding Indian and Negro population of the interior, estimated at 11 167 in 1921 and 26 000 in 1950.

[83] Excluding Indian jungle population, numbering 46 854 in 1920, 136 147 in 1926, 103 492 in 1936, 100 600 in 1941 and 56 705 in 1950.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[49] Taux d'accroissement non calculés parce que les résultats des recensements antérieurs à celui de 1954 ont été déclarés très exagérés.

[72] Première série : population effectivement dénombrée. Deuxième série : compte tenu d'ajustements pour omissions et sous-dénombrement.

[73] Non compris la population du département d'Arica non classée par sexe (9 704 en 1907 et 15 348 en 1920).

[74] Non compris les Indiens vivant en tribus qui n'ont pas été classés par sexe (94 000 en 1912 et 158 428 en 1918).

[75] Compte tenu d'un ajustement pour sous-dénombrement estimé à 191 683 pour les deux sexes.

[76] Population de droit, mais non compris les Indiens de la jungle.

[77] Y compris les dépendances.

[78] Non compris la population des établissements pénitentiaires, les militaires et les Indiens vivant en tribus, soit au total 7 050 en 1936.

[79] Ne correspond pas à l'ensemble de la population; le pourcentage dénombré est inconnu.

[80] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés par sexe. Compte non tenu d'un ajustement de 17 000 pour les Indiens de la jungle et d'un ajustement de 50 067 pour sous-dénombrement.

[81] Population effectivement dénombrée. Le total, compte tenu d'un ajustement de 465 144 pour sous-dénombrement et d'un ajustement de 350 000 pour les Indiens de la jungle, est de 7 023 111 pour les deux sexes.

[82] Non compris les Indiens et les Noirs de l'intérieur, estimés à 11 167 en 1921 et à 26 000 en 1950.

[83] Non compris les Indiens de la jungle, soit 46 854 en 1920, 136 147 en 1926, 103 492 en 1936, 100 600 en 1941 et 56 705 en 1950.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[84] Excludes military personnel.

[85] Excluding Perim.

[86] Excludes schedules not tabulated by sex, numbering 1 775 for both sexes.

[87] Second series: excluding alien armed forces, merchant seamen and foreign diplomatic personnel, but including civilian aliens.

[88] First series: as part of Japanese territory, known as Ogasawara-shicho, which was part of Tokyo-to. Second series: excluding Allied military and civilian personnel and their dependants stationed in the area.

[89] Prior to 1953, area covered by census only. For 1953, *de jure* population in 252 towns only, approximating urban area of the Union; results of first stage of a multi-stage sample census. For 1954, 2 143 village tracts only.

[90] Estimated from results of a demographic sample survey, in 3 460 villages in 1958 and in 345 villages in 1959, and supplementary administrative reports.

[91] Second series: excluding non-resident military and shipping personnel, together numbering 36 606 in 1946; for 1901, also excluding 4 914 prisoners of war.

[92] Male and female population actually enumerated. Rate computed on population for both sexes of 8 154 580, which includes 0.7 per cent adjustment for underenumeration.

[93] Population registered; excluding estimate for persons living in outlying areas where local registration offices were not established, numbering 8 397 477 for both sexes. No adjustment has been made for 0.1 per cent estimated net underenumeration.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[84] Non compris les militaires.

[85] Non compris Perim.

[86] Non compris les bulletins non classés par sexe (1 775 pour les deux sexes).

[87] Deuxième série : non compris les militaires étrangers, les marins de commerce et le personnel diplomatique étranger, mais y compris les civils étrangers.

[88] Première série : partie du territoire japonais connue sous le nom de Ogasawara-shicho, qui dépendait de Tokyo-to. Deuxième série : non compris les militaires et le personnel civil alliés en poste sur le territoire ainsi que les personnes à leur charge les accompagnant.

[89] Pour les années antérieures à 1953, fractions variables de l'ensemble du pays. Pour 1953, population de droit de 252 villes seulement, correspondant approximativement aux zones urbaines de l'Union; résultats du premier degré d'une enquête par sondage à plusieurs degrés. Pour 1954, 2 143 villages seulement.

[90] Estimation établie d'après les résultats d'une enquête démographique par sondage effectuée dans 3 460 villages en 1958 et dans 345 villages en 1959, et complétée au moyen de rapports administratifs.

[91] Deuxième série : non compris les militaires et agents des compagnies maritimes non résidents, soit 36 606 personnes en 1946; pour 1901, non compris également 4 914 prisonniers de guerre.

[92] Population masculine et féminine effectivement dénombrée. Taux calculé pour une population totale de 8 154 580 compte tenu d'un ajustement de 0,7 pour 100 pour sous-dénombrement.

[93] Population enregistrée; compte non tenu du nombre estimatif de personnes habitant les régions reculées où des bureaux d'enregistrement n'avaient pas été créés, soit 8 397 477 pour les deux sexes. Aucun ajustement n'a été fait pour le sous-dénombrement net estimé à 0,1 pour 100.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[4] Rounded figure; return in units not available.

[94] Including Quemoy and Matsu Islands.

[95] Former British dependency; declared independent 16 August 1960. Excluding persons in special internment camps, numbering 7 482 for both sexes in 1946. Second series: excluding armed forces.

[96] Excluding transients afloat. First series: excluding former states of Johore, Kedah, Kelantan, Trengganu and Perlis, not enumerated in 1901. First and second series: excluding non-locally domiciled military and civilian services personnel and their dependants. Second series: for 1947, also excluding Japanese prisoners of war.

[97] First series: pre-partition India in area enumerated at 1941 census, i.e., excluding Aden and Burma, separated from India in 1932 and 1937, respectively. Second series: Republic of India, but including Sikkim and excluding the Part B tribal areas of Assam where census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon which did not become part of India until 1 November 1954. Data for Kashmir-Jammu, the final status of which has not yet been determined, were not included. Third series: including data for Kashmir-Jammu, the final status of which has not yet been determined, and an estimate of 1 580 000 for Manipur, North East Frontier Agency, Nagaland and Sikkim.

[98] Excludes population of settlement of Chandernagore, numbering 26 831 for both sexes.

[99] Computed on 1951 population in territory equivalent to that of 1961 census.

[100] Including estimate of 250 000 for nomad population.

[101] Including nationals abroad and adjustment of 221 066 for underenumeration (124 632 males, 96 434 females).

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[4] Chiffre arrondi; données à l'unité près non disponibles.

[94] Y compris les îles de Quemoy et Matsu.

[95] Anciennes possessions britanniques; proclamées indépendantes le 16 août 1960. Non compris les personnes se trouvant dans des camps d'internement spéciaux, soit 7 482 pour les deux sexes en 1946. Deuxième série : non compris les militaires.

[96] Non compris les personnes de passage à bord de navires. Première série : non compris les habitants des anciens Etats de Johore, Kedah, Kelantan, Trengganu et Perlis non dénombrés en 1901. Première et deuxième série : non compris les militaires et les fonctionnaires domiciliés en dehors du territoire et les personnes à leur charge les accompagnant. Deuxième série : pour 1947, non compris également les prisonniers de guerre japonais.

[97] Première série : l'Inde avant le partage pour le recensement de 1941, c.à.d. non compris Aden et la Birmanie, détachés de l'Inde en 1932 et 1937 respectivement. Deuxième série : République indienne, mais y compris le Sikkim et non compris les zones tribales (partie B) de l'Assam où le recensement n'a pu avoir lieu, les Etablissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954 et le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé. Troisième série : y compris le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé, et le Manipur, le Territoire de la frontière du Nord-Est, le Nagaland et le Sikkim, pour lesquels la population a été estimée à 1 580 000.

[98] Non compris la population de l'Etablissement de Chandernagor, soit 26 831 pour les deux sexes.

[99] Taux calculé sur la base de la population de 1951 pour le territoire recensé de 1961.

[100] Y compris 250 000 nomades (estimation).

[101] Y compris les Irakiens à l'étranger et compte tenu d'un ajustement de 221 066 pour sous-dénombrement (124 632 hommes et 96 434 femmes).

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[102] Jewish population only. Prior to 1948, Jewish population of Palestine.

[103] High rate of increase attributable in large part to Jewish immigration.

[104] Prewar data adjusted to exclude most of the territory no longer part of Japan, i.e., Korea, Taiwan, Karafuto, Ryukyu Islands, etc. For 1945-1950, data exclude Tokara Archipelago and Amami Islands, not under the administration of Japan after 2 September 1945 but which reverted to Japan on 5 December 1951 and 25 December 1953 respectively.

[105] Including armed forces outside country, estimated at 1 200 000.

[106] Civilian population, but including a small number of military personnel living with their families.

[107] Excluding armed forces and foreigners. Estimated total population was 72 455 000.

[108] Excluding foreigners and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated. Estimated total population was 74 024 000.

[109] Including adjustment for underenumeration, estimated at 3 109, due to flood conditions at time of census, but not adjusted for underenumeration which cannot be distributed by area, estimated at 525 527. Population actually enumerated is 78 098 364.

[110] Excluding Allied military and civilian personnel and their dependants.

[111] Population actually enumerated, not including 0.39 per cent adjustment for underenumeration.

[112] Results of a census of housing. A census of population has never been taken in Jordan. Excluding military personnel and their dependants living on military installations, and foreigners, except registered Palestinian refugees, numbering 469 576 in June 1952, who are included.

[113] Korean nationals only.

[114] Koreans nationals only. For 1949, data relate to population in area south of the 38th parallel.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[102] Population juive seulement. Avant 1948, population juive de la Palestine.

[103] Taux d'accroissement élevé imputable en grande partie à une forte immigration juive.

[104] Chiffres d'avant-guerre ajustés pour éliminer la plupart des territoires ne faisant plus partie du Japon, c.à.d. la Corée, Taïwan, Karafuto, les îles Ryû-Kyû, etc. Pour 1945/1950, non compris l'archipel des Tokara et les îles Amami enlevés à l'administration japonaise le 2 septembre 1945, et qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.

[105] Y compris les militaires à l'étranger, estimés à 1 200 000.

[106] Population civile, mais y compris quelques militaires vivant dans leurs foyers.

[107] Non compris les militaires et les étrangers. Population totale estimée à 72 455 000.

[108] Non compris les étrangers et les personnes originaires de Corée, de Formose et des Ryû-Kyû qui ont demandé leur rapatriement. Population totale estimée à 74 024 000.

[109] Compte tenu d'un ajustement pour sous-dénombrement estimé à 3 109 et imputable aux inondations qui ont eu lieu à l'époque du recensement, mais compte non tenu du sous-dénombrement qui n'a pu être ventilé par région, estimé à 525 527. Population effectivement dénombrée : 78 098 364.

[110] Non compris les militaires et le personnel civil alliés, ainsi que les personnes à leur charge les accompagnant.

[111] Population effectivement dénombrée, compte non tenu d'un ajustement de 0,39 pour 100 pour sous-dénombrement.

[112] D'après les résultats d'un recensement de l'habitation. Aucun recensement de population n'a jamais eu lieu en Jordanie. Non compris les militaires et les personnes à leur charge vivant dans des établissements militaires, ainsi que les étrangers, mais y compris les réfugiés palestiniens immatriculés (469 576 en juin 1952).

[113] Ressortissants coréens seulement.

[114] Ressortissants coréens seulement. Pour 1949, population au sud du 38ème parallèle.

* Provisional.
[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.
[2] *De jure* population.
[110] Excluding Allied military and civilian personnel and their dependants.
[115] Mongolian nationals only in area excluding Kobdo district and the possessions of Bogdo-Gegen. Total population at time of census unofficially estimated at 647 504 persons.
[116] Prior to 1952-1954, censuses believed to be very inadequate.
[117] Excludes schedules not tabulated by sex, numbering 21 546 for both sexes.
[118] Incomplete.
[119] Excluding transients and members of UK armed forces, numbering 1 442 and 66, respectively.
[120] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Gilgit, Baltistan, Junagadh, Manavadar (except for 1961) also excluding the port and peninsula of Gwadar acquired from Muscat and Oman on 8 September 1958. First series: also excluding the Frontier Regions of the North West Frontier Provinces. For 1951, including an estimate of 1 759 932, of which 924 651 males and 835 281 females, for population of Frontier Regions, only partially covered by census, but excluding adjustment for underenumeration in urban areas amounting to 5 per cent or 393 166 persons for both sexes.
[121] Territory formerly under British mandate.
[122] Excludes Bedouin population, numbering 66 553 for both sexes.
[123] First series: including military personnel, "territorials" (i.e., Formosans and Koreans) and foreigners.
[124] Excludes military personnel and foreigners.

* Provisoire.
[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.
[2] Population de droit.
[110] Non compris les militaires et le personnel civil alliés, ainsi que les personnes à leur charge les accompagnant.
[115] Mongols seulement sur un territoire ne comprenant pas le district de Kobdo et les possessions de Bogdo-Gegen. Population totale à l'époque du recensement, estimée officieusement à 647 504.
[116] Avant 1952-1954, recensements vraisemblablement très insuffisants.
[117] Non compris les bulletins non classés par sexe, soit 21 546 pour les deux sexes.
[118] Incomplet.
[119] Non compris les personnes de passage et les militaires britanniques, soit 1 442 et 66 respectivement.
[120] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé ni le Junagadh, le Baltistan, le Gilgit, le Manavadar et Sauf pour 1961 non compris également le port et la péninsule de Gwadar cédés par Mascate et Oman le 8 septembre 1958. Première série : non compris également les habitants des régions frontalières des Provinces de la Frontière du Nord-Ouest. Pour 1951, compte tenu d'une estimation de 1 759 932 (dont 924 651 hommes et 835 281 femmes) pour la population des régions frontalières partiellement recensée, mais compte non tenu d'un ajustement pour sous-dénombrement dans les régions urbaines (5 pour 100 ou 393 166 pour les deux sexes).
[121] Ancien mandat britannique.
[122] Non compris les Bédouins, au nombre de 66 553 pour les deux sexes.
[123] Première série : y compris les militaires, les habitants des "territoires" (Formosans et Coréens) et les étrangers.
[124] Non compris les militaires et les étrangers.

* Provisional.
[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.
[2] *De jure* population.
[4] Rounded figure; return in units not available.
[48] Second series: *de jure* population.
[125] Excluding transients afloat, numbering 3 466 at 1957 census, and non-locally domiciled military and civilian services personnel and their dependants, numbering 27 299 at 1957 census.
[126] Excluding Japanese prisoners of war, numbering 7 517.
[127] First series: excluding Hatay, acquired from Syria 23 June 1939.
[127a] Based on 1927 population actually enumerated, rate is 2.14; if adjustment for underenumeration is made, rate is 1.59.
[128] First series: excluding Eupen, Malmedy and Saint-Vith, ceded by Germany in 1925.
[129] First series: territory prior to World War 1, i.e., including Southern Dobruja but excluding territory in south acquired during Balkan wars and retained after World War 1. Second series: excluding Southern Dobruja, ceded by Romania in 1940.

* Provisoire.
[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.
[2] Population de droit.
[4] Chiffre arrondi; données à l'unité près non disponible.
[48] Deuxième série : population de droit.
[125] Non compris les personnes de passage à bord de navires, (3 466 au recensement de 1957), ni les militaires et les fonctionnaires civils domiciliés hors du territoire et les personnes à leur charge les accompagnant (27 299 au recensement de 1957).
[126] Non compris 7 517 prisonniers de guerre japonais.
[127] Première série : non compris le Hataï cédé par la Syrie le 23 juin 1939.
[127a] D'après la population effectivement dénombrée en 1927, le taux est de 2,14; après ajustement pour sousdénombrement, le taux est de 1,59.
[128] Première série : non compris Eupen, Malmédy et St-Vith, cédées par l'Allemagne en 1925.
[129] Première série : territoire d'avant la première guerre mondiale, c.à.d. y compris la Dobroudja méridionale, mais non compris les territoires du Sud gagnés pendant les guerres balkaniques et conservés après la première guerre mondiale. Deuxième série : non compris la Dobroudja méridionale cédée par la Roumanie en 1940.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[48] Second series: *de jure* population.

[130] First series: territory prior to World War II, i.e., including Subcarpathia and a part of Slovakia ceded to USSR in 1947. Second series: excluding Bratislava Bridgehead, ceded by Hungary in 1947.

[131] Excluding Faeroe Islands and Greenland, shown separately.

[132] First series: excluding South Jutland, ceded by Germany after World War 1. Second Series: de facto population of present territory. Third series: *de jure* population of present territory.

[133] First series: Finnish nationals only, including those outside country. Second series: Finnish nationals in Finland, including merchant seamen at sea. Comparability of population not affected by variations in area.

[134] Including Petsamo, the Karelian Isthmus and other small areas ceded to USSR 1940-1947.

[135] Including small areas ceded to USSR 1944-1947.

[136] First series: excluding Alsace-Lorraine, ceded by Germany after World War 1, and Tende and Brigue, ceded by Italy in 1947. Second series: excluding Tende and Brigue.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[48] Deuxième série : population de droit.

[130] Première série : territoire d'avant la deuxième guerre mondiale, c.à.d. y compris la Subcarpathie et une partie de la Slovaquie cédées à l'URSS en 1947. Deuxième série : non compris la tête de pont de Bratislava cédée par la Hongrie en 1947.

[131] Non compris les îles Féroé et le Groenland qui font l'objet de rubriques distinctes.

[132] Première série : non compris le Jutland méridional cédé par l'Allemagne après la première guerre mondiale. Deuxième série : population de fait du territoire actuel. Troisième série : population de droit du territoire actuel.

[133] Première série : nationaux finlandais seulement, y compris ceux qui se trouvaient hors du pays. Deuxième série : nationaux finlandais en Finlande, y compris les marins de commerce en mer. La comparabilité des données sur la population n'est pas affectée par les variations de superficie.

[134] Y compris les territoires cédés à l'URSS en 1940-1947 (Petsamo, isthme de Carélie et diverses zones peu étendues).

[135] Y compris diverses zones peu étendues cédées à l'URSS en 1944-1947.

[136] Première série : non compris l'Alsace-Lorraine cédée par l'Allemagne après la première guerre mondiale, et Tende et Brigue cédées par l'Italie en 1947. Deuxième série : non compris Tende et Brigue.

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[137] First and second series: territory of 1937, but excluding the Saar. Second and third series: *de jure* population. Third series: British, French, US and USSR zones of occupation, including Berlin.

[138] Including prisoners of war, civilian internees and refugees in transit camps, together numbering 384 323 for Germany, 133 327 for Eastern Germany, 247 240 for Federal Republic of Germany, 3 756 for Berlin (included in total population for computation of rate of increase but not available for population by sex), 1 397 for East Berlin and 2 359 for West Berlin.

[139] First series: excluding the Saar.

[140] *De jure* population except in Bremen. *De jure* total for whole country is 43 952 529 persons.

[141] Results of a census of housing which enumerated individuals separately.

[142] Civilian population, and excluding dependants of armed forces stationed in the area and persons accommodated in harbour shipping, numbering 1 123 and 208 respectively in 1931 and 1 439 and 479 respectively in 1951.

[143] First series: excluding Macedonia, Epirus, Crete, Aegean Islands annexed 1913-1914, Western Thrace annexed 1919-1920, and the Dodecanese Islands ceded by Italy in 1947. Second series: excluding Dodecanese Islands.

[144] High rate of increase largely attributable to heavy influx of refugees from Asia Minor.

[145] Includes armed forces outside country and excludes alien armed forces within country.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[137] Première et deuxième séries : territoire de 1937, non compris la Sarre. Deuxième et troisième séries : population de droit. Troisième série : zones d'occupation américaine, britannique, française et soviétique, y compris Berlin.

[138] Y compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 384 323 pour l'Allemagne, 133 327 pour l'Allemagne orientale, 247 240 pour la République fédérale d'Allemagne, 3 756 pour Berlin (compris dans la population totale pour le calcul du taux d'accroissement, mais répartition par sexe inconnue), 1 397 pour Berlin-Est et 2 359 pour Berlin-Ouest.

[139] Première série : non compris la Sarre.

[140] Population de droit, sauf Brême. Population de droit pour l'ensemble du pays : 43 952 529.

[141] Résultats d'un recensement de l'habitation pour lequel il y a eu dénombrement individuel de la population.

[142] Population civile non compris les membres des familles de militaires en garnison sur le territoire et les personnes logées à bord de navires dans le port, soit 1 123 et 208 respectivement en 1931 et 1 439 et 479 respectivement en 1951.

[143] Première série : non compris la Macédoine, l'Epire, la Crète et les îles de la mer Egée annexées en 1913-1914, la Thrace occidentale annexée en 1919-1920 et le Dodécanèse cédé par l'Italie en 1947. Deuxième série : non compris le Dodécanèse.

[144] Taux d'accroissement élevé imputable en grande partie à une forte immigration de réfugiés en provenance d'Asie Mineure.

[145] Y compris les militaires hors du pays, mais non compris les militaires étrangers dans le pays.

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[57] First series: *de jure* population.

[148] First series: territory of 1923-1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany.

[149] The sum of these unrevised returns of sex is less by 8 000 than the revised total for both sexes, which numbers 27 201 000. Data include estimates for Wilno and Upper Silesia, numbering 517 000 and 1 009 000 respectively.

[150] Excludes persons not tabulated by sex, numbering 394 495.

[151] First series: *de jure* population; territory prior to Balkan Wars, i.e., excluding Banat and Transylvania.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[57] Première série : population de droit.

[148] Première série : territoire de 1923-1937, c.à.d. y compris régions cédées à l'URSS après la deuxième guerre mondiale mais non compris Dantzig et les autres régions qui faisaient précédemment partie de l'Allemagne.

[149] Le total de ces bulletins non revisés, classés par sexe, est inférieur de 8 000 au total revisé pour les deux sexes (27 201 000). Compte tenu d'estimations pour Wilno (517 000) et la Haute-Silésie (1 009 000).

[150] Non compris 394 495 personnes non classées par sexe.

[151] Première série : population de droit; territoire d'avant les guerres balkaniques, c.à.d. non compris le Banat et la Transylvanie.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

* Provisional.

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.

[2] *De jure* population.

[152] Including an estimate of 54 876 (27 341 males, 27 535 females) for the population of Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954.

[153] *De jure* population. First series: excluding Swains Island, annexed in 1925. Second series: including armed forces stationed in the area.

[154] Excluding full-blooded aborigines, estimated at 60 000 in 1921 and 1933, 47 000 in 1944, 46 638 in 1947 and 39 319 in 1954.

[155] First series: excluding transients afloat but including non-resident military personnel. Second series: excluding transients afloat and non-locally domiciled military and civilian personnel and their dependants.

[156] Excludes 1 209 persons not tabulated by sex.

* Provisoire.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.

[2] Population de droit.

[152] Compte tenu d'une estimation de 54 876 (27 341 hommes et 27 535 femmes) pour la population de Koper et Buje, c.à.d. la partie de l'ancien territoire libre de Trieste rattachée à la Yougoslavie en 1954.

[153] Population de droit. Première série : non compris les îles Swains annexées en 1925. Deuxième série : non compris les militaires en garnison sur le territoire.

[154] Non compris les aborigènes de race pure, dont le nombre a été estimé à 60 000 en 1921 et 1933, 47 000 en 1944, 46 638 en 1947 et 39 139 en 1954.

[155] Première série : non compris les personnes de passage à bord de navires, mais y compris les militaires non résidents. Deuxième série : non compris les personnes de passage à bord de navires ni les militaires et les fonctionnaires civils domiciliés hors du territoire et les personnes à leur charge les accompagnant.

[156] Non compris 1 209 personnes non classées par sexe.

6. Enumerated population by sex and rates of increase for both sexes (continued)— Population dénombrée selon le sexe et taux d'accroissement pour les deux sexes (suite)

[1] For both sexes. Rates are not computed between censuses or surveys covering less than total population, or where intercensal comparability in type of census, geographic area, or ethnic coverage appears to be lacking.
[4] Rounded figure; return in units not available.
[159] First series: Samoan population only.
[160] Excluding persons on vessels overseas and US military personnel stationed in the area, together numbering 128.
[161] First series: territory of 1923-1938.
[162] Includes an estimate for the western province of the Byelorussian SSR and of the Ukrainian SSR, the Estonian SSR, the Latvian SSR, the Lithuanian SSR, and the Moldavian SSR.
[163] Includes an estimate for the western province.

[1] Pour les deux sexes. Aucun taux n'a été calculé entre les recensements ou enquêtes ayant porté sur une partie seulement de la population, ou lorsqu'il semble y avoir un défaut de comparabilité d'un recensement à l'autre en ce qui concerne la nature des recensements, le territoire ou les groupes ethniques visés.
[4] Chiffre arrondi; données à l'unité près non disponibles.
[159] Première série : population samoane seulement.
[160] Non compris les personnes se trouvant à bord de navires à l'étranger et les militaires américains en garnison sur le territoire, soit au total 128 personnes.
[161] Première série : territoire de 1923-1938.
[162] Y compris une estimation pour les provinces occidentales de la RSS de Biélorussie et de la RSS d'Ukraine, pour la RSS d'Estonie, la RSS de Lettonie, la RSS de Lituanie et la RSS de Moldavie.
[163] Y compris une estimation pour la province occidentale.

7. Population of capital cities and cities of 100 000 and more inhabitants : each census 1939–1961, and estimates 1955–1961

Population des capitales et des villes de 100 000 habitants et plus : chaque recensement 1939–1961, et estimations 1955–1961

[The capital city of each country is shown in capital letters. (E) indicates an estimate of population; all other data are national or municipal census returns. For discussion, see page 32. — Les capitales d'Etats sont imprimées en majuscules. Le signe (E) indicates une estimation de population; toutes les autres données proviennent des résultats de recensements nationaux ou municipaux. Voir les explications, page 81.]

[1] *De jure* population.
[2] Excludes persons in institutions.
[3] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.
[4] Based on results of municipal census of 1955-1956 of African population, which gave total of 119 000 including 5 per cent adjustment for underenumeration, and of census of 15 January 1957 of non-indigenous *de jure* population, which gave total of 5 734.
[5] Of which non-indigenous *de jure* population numbered 3 750 at census of 15 January 1957.
[6] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[7] African population only. Non-indigenous *de jure* population numbered 2 669 at census of 17 December 1956.
[9] African population only. Non-indigenous *de jure* population numbered 1 145 at census of 17 December 1956.
[10] African population only. Non-indigenous *de jure* population numbered 5 346 at census of 17 December 1956.
[11] Formerly Belgian Congo; declared independent 30 June 1960.

[1] Population de droit.
[2] Non compris la population des collectivités.
[3] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant la 1er janvier 1960.
[4] D'après les résultats du recensement municipal de la population africaine de 1955-1956, qui a donné un total de 119 000, y compris une majoration de 5% pour tenir compte du sous-dénombrement, et d'après les résultats du recensement de la population non indigène de droit au 15 janvier 1957 (5 734).
[5] Dont 3 750 non-indigènes appartenant à la population de droit, dénombrés au recensement du 15 janvier 1957.
[6] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari), 13 août; Tchad, 11 août; Congo (anciennement Moyen-Congo), 15 août; Gabon, 17 août.
[7] Population africaine seulement; 2 669 non-indigènes appartenant à la population de droit, dénombrés au recensement du 17 décembre 1956.
[9] Population africaine seulement; 1 145 non-indigènes appartenant à la population de droit, dénombrés au recensement du 17 décembre 1956.
[10] Population africaine seulement; 5 346 non-indigènes appartenant à la population de droit, dénombrés au recensement du 17 décembre 1956.
[11] Annciennement Congo belge; proclamé indépendant le 30 juin 1960.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[6] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[13] Of which non-indigenous *de jure* population numbered 1 072 at census of 12 December 1956.

[14] Based on results of 1952 municipal census, but includes adjustment for omissions.

[15] Of which non-indigenous *de jure* population numbered 4 149 at census of 12 December 1956.

[16] African population only. Non-indigenous *de jure* population numbered 1 496 at census of 17 December 1956.

[17] Comprises city proper, suburbs and Iles de Loos.

[18] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

* Données provisoires.

[6] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant aux dates ci-après : République centrafricaine (anciennement Oubangui-Chari), 13 août; Tchad, 11 août; Congo (anciennement Moyen-Congo), 15 août; Gabon, 17 août.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, 1er août; Côte-d'Ivoire, 7 août; Mali (anciennement République soudanaise), 20 juin; Mauritanie, 28 novembre; Niger, 3 août; Sénégal, 20 juin; Haute-Volta, 5 août.

[13] Dont 1 072 non-indigènes appartenant à la population de droit, dénombrés au recensement du 12 décembre 1956.

[14] D'après les résultats du recensement municipal de 1952 ajustés pour compenser les omissions.

[15] Dont 4 149 non-indigènes appartenant à la population de droit, dénombrés au recensement du 12 décembre 1956.

[16] Population africaine seulement; 1 496 non-indigènes appartenant à la population de droit, dénombrés au recensement du 17 décembre 1956.

[17] Ville proprement dite, zone suburbaine et îles de Loos.

[18] Aussi connu sous le nom de République malgache. Ce pays est devenu, à la fin de 1958, une République à autonomie interne dans le cadre de la communauté française et a été proclamé indépendant le 25 juin 1960.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[8] Data refer to commune(s) which may contain rural area as well as urban centre.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[19] For Zone of Tanger and suburbs.

[20] African population only. Non-indigenous *de jure* population numbered 1 133 at census of 12 December 1956.

[21] Former British dependency; declared independent 1 October 1960.

[22] African population only.

[23] Lagos township, comprising Lagos Island and Lagos mainland.

[24] For capital of Federation, see Salisbury, Southern Rhodesia.

[25] Data refer to non-indigenous population and "Africans in employment" only.

[26] African population only; based on results of 1950 demographic sample survey. Non-indigenous population numbered 8 720 at census of 8 May 1956.

* Données provisoires.

[8] Les données se rapportent à une commune (ou des communes) pouvant comprendre une zone rurale aussi bien qu'un centre urbain.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, 1er août; Côte-d'Ivoire, 7 août; Mali (anciennement République soudanaise), 20 juin; Mauritanie, 28 novembre; Niger, 3 août; Sénégal, 20 juin; Haute-Volta, 5 août.

[19] Tanger et zone suburbaine.

[20] Population africaine seulement; 1 133 non-indigènes appartenant à la population de droit, dénombrés au recensement du 12 décembre 1956.

[21] Anciennement sous dépendance britannique; proclamé indépendant le 1er octobre 1960.

[22] Population africaine seulement.

[23] *Lagos Township*, c'est-à-dire l'île de Lagos et le secteur continental de Lagos.

[24] Pour la capitale de la Fédération, voir Salisbury, Rhodésie du Sud.

[25] Population non indigène et "Africains occupant un emploi" seulement.

[26] Population africaine calculée d'après des résultats d'enquêtes démographiques par sondage de 1950. La population non-indigène dénombrée au recensement du 8 mai 1956 s'élevait à 8 720 personnes.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[12] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[27] For Commune of Dakar, comprising city proper, the suburban villages and Gorée.

[28] Created 1 July 1960 by the union of former British Somaliland with the former United Nations Trust Territory of Somaliland under Italian administration; declared independent 26 June and 1 July 1960, respectively.

[29] Formerly known as Spanish Guinea, and comprising African Provinces of Fernando Póo and Rio Muni.

[30] Comprises Khartoum, Khartoum North and Omdurman.

[31] Included in urban agglomeration of Khartoum.

* Données provisoires.

[12] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu en 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, 1er août; Côte-d'Ivoire, 7 août; Mali (anciennement République soudanaise), 20 juin; Mauritanie, 28 novembre; Niger, 3 août; Sénégal, 20 juin; Haute-Volta, 5 août.

[27] Commune de Dakar, c'est-à-dire la ville proprement dite, les villages suburbains et Goréé.

[28] Constitué par la réunion, le 1er juillet 1960, de l'ancienne Somalie britannique et de l'ancien Territoire sous tutelle de la Somalie sous administration italienne; ces deux territoires ont été proclamés indépendants le 26 juin et le 1er juillet respectivement.

[29] Ancienne Guinée espagnole; provinces africaines de Fernando Póo et Rio Muni.

[30] Khartoum, Khartoum North et Omdurman.

[31] Comprise dans l'agglomération urbaine de Khartoum.

[1] *De jure* population.
[32] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.
[33] Data for urban agglomerations refer to "metropolitan area" comprised of parent municipality and an adjoining area which is urban in character and economically linked.
[34] Pretoria is the administrative capital, Cape Town the legislative capital.
[34a] Data are based on a pre-censal house listing.

[1] Population de droit.
[32] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.
[33] Les données se rapportent à des "zones métropolitaines" composées d'une municipalité principale et de la zone avoisinante de caractère urbain, qui lui est économiquement liée.
[34] Pretoria est la capitale administrative, Cape Town la capitale législative.
[34a] Données provenant d'un relevé des logements antérieures au recensement.

* Provisional.
[1] *De jure* population.
[8] Data refer to commune(s) which may contain rural area as well as urban centre.
[36] Data for urban agglomeration refer to "metropolitan area", which for 1950 comprised *cantón central* of San José (including San José city), *cantóns* of Montes de Oca, Tibás and part of *cantón* of Goicoechea; beginning 1955, comprises in addition *cantóns* of Curridabat and Escazú, and parts of *cantóns* of Alajuelita, Desamparados and Moravia.
[37] Urban agglomeration of Marianao included in that of La Habana.
[38] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 4.3 per cent for country as a whole.

* Données provisoires.
[1] Population de droit.
[8] Les données se rapportent à une commune (ou des communes) pouvant comprendre une zone rurale aussi bien qu'un centre urbain.
[36] Les données relatives à l'agglomération urbaine se rapportent à une "zone métropolitaine" qui comprenait, en 1950, le *cantón* central de San José (y compris la ville de San José), les *cantones* de Montes de Oca, Tribás et une partie du *cantón* de Goicoechea; à partir de 1955, y compris en outre les *cantones* de Curridabat et Escazú et certaines parties des *cantones* de Alajuelita, Desamparados et Moravia.
[37] L'agglomération urbaine de Mariano est comprise dans celle de La Havane.
[38] Population effectivement dénombrée, c'est-à-dire compute non tenu d'un ajustement destiné à compenser un sous-dénombrement estimé à 4,3 pour cent pour l'ensemble du pays.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[39] Data refer to *corregimientos* of Calidonia, El Chorillo, San Felipe and Santa Ana, which comprised the city proper prior to municipal resolution of 22 January 1953; beginning 1955, refer in addition to *corregimientos* of Rio Abajo, San Francisco and part of Juan Diaz and Pueblo Nuevo.

[40] *De jure* population, but including armed forces stationed in the area.

[41] Data for urban agglomeration refer to "standard metropolitan area", comprised of municipality of Ponce, which includes Ponce proper.

[42] Data for urban agglomeration refer to "standard metropolitan area", comprised of municipalities of San Juan (including San Juan proper), Bayamón, Cataño, Guaynabo, and, for 1960, in addition Río Piedras, population of which numbered 19 935 in 1940 and 132 438 in 1950.

* Données provisoires.

[39] Les données se rapportent aux *corregimientos* de Calidonia, El Chorillo, San Felipe et Santa Ana, qui constituaient la ville proprement dite avant que ne soit adoptée la résolution municipale du 22 janvier 1953; pour les années antérieures à 1955, y compris en outre les *corregimientos* de Rio Abajo, San Francisco et une partie de Juan Diaz et Pueblo Nuevo.

[40] Population de droit, mais y compris les militaires en garnison sur le territoire.

[41] Les données relatives à l'agglomération urbaine se rapportent à une "zone métropolitaine officielle" constituée de la municipalité de Ponce, qui comprend la ville de Ponce.

[42] Les données relatives à l'agglomération urbaine se rapportent à une "zone métropolitaine officielle" constituée des municipalités de San Juan (qui comprend la ville de San Juan), Cataño, Bayamón, Guaynabo, ainsi que, pour 1960, Rio Piedras, dont la population était de 19 935 en 1940 et 132 438 en 1950.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.
[43] *De jure* population, but excluding armed forces overseas.
[44] Data for urban agglomerations refer to "standard metropolitan statistical areas" as defined in 1960.
[52] Includes Niagara Falls.
[53] Included in urban agglomeration of Boston.
[54] Included in urban agglomeration of Philadelphia.
[55] Includes Urbana.
[56] Includes Rock Island and Moline.
[57] Includes Superior.
[58] Included in urban agglomeration of Newark.

* Données provisoires.
[43] Population de droit, mais non compris les militaires se trouvant outre-mer.
[44] Les données relatives aux agglomérations urbaines se rapportent aux "zones métropolitaines statistiques officielles" définies en 1960.
[52] Y compris Niagara Falls.
[53] Comprise dans l'agglomération urbaine de Boston.
[54] Comprise dans l'agglomération urbaine de Philadelphia.
[55] Y compris Urbana.
[56] Y compris Rock Island et Moline.
[57] Y compris Superior.
[58] Comprise dans l'agglomération urbaine de Newark.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.
[43] *De jure* population, but excluding armed forces overseas.
[44] Data for urban agglomerations refer to "standard metropolitan statistical areas" as defined in 1960.
[74] Includes St. Paul.
[75] Includes Muskegon Heights.
[76] Includes Elizabeth.
[77] Includes Hampton.
[78] Includes Yonkers. Population of New York-Northeastern New Jersey Urbanized Area is 14 114 927; population of Standard Consolidated Area is 14 759 429.
[79] Included in urban agglomeration of Buffalo.
[80] Includes Portsmouth.

* Données provisoires.
[43] Population de droit, mais non compris les militaires se trouvant outre-mer.
[44] Les données relatives aux agglomérations urbaines se rapportent aux "zones métropolitaines statistiques officielles" définies en 1960.
[74] Y compris St. Paul.
[75] Y compris Muskegon Heights.
[76] Y compris Elizabeth.
[77] Y compris Hampton.
[78] Y compris Yonkers. La population de la zone métropolitaine New York–Nord-Est du New Jersey est de 14 114 927; la population de la zone "officielle" est de 14 759 429.
[79] Comprise dans l'agglomération urbaine de Buffalo.
[80] Y compris Portsmouth.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.
[40] *De jure* population, but including armed forces stationed in the area.
[43] *De jure* population, but excluding armed forces overseas.
[44] Data for urban agglomerations refer to "standard metropolitan statistical areas" as defined in 1960.
[97] Included in urban agglomeration of New York.
[98] Includes Warren.
[98a] Increase due in part to extension of city boundaries.
[99] Comprises Bridgetown, Bridgetown suburbs (3 609) and St. Michael's Parish (51 975).
[100] Data for urban agglomeration refer to "metropolitan area", comprised of Kingston Parish and urban sector of St. Andrew's Parish; for 1955-1957, also includes rural part of St. Andrew's Parish.
[101] Based on result of sample survey.
[102] Marked decrease due to revision which takes into consideration internal migration within the territory.

* Données provisoires.
[40] Population de droit, mais y compris les militaires en garnison sur le territoire.
[43] Population de droit, mais non compris les militaires se trouvant outre-mer.
[44] Les données relatives aux agglomérations urbaines se rapportent aux "zones métropolitaines statistiques officielles" définies en 1960.
[97] Comprise dans l'agglomération urbaine de New York. [98] Y compris Warren.
[98a] Augmentation partiellement attribuable à des annexions de communes limitrophes.
[99] Constituée de Bridgetown, de la zone suburbaine de Bridgetown (3 609) et de la paroisse de St. Michael (51 975).
[100] Les données relatives à l'agglomération urbaine se rapportent à une "zone métropolitaine" constituée de la paroisse de Kingston et du secteur urbain de la paroisse de St. Andrew; pour 1955-1957, y compris également la partie rurale de la paroisse de St. Andrew.
[101] D'après des enquêtes par sondage.
[102] Forte diminution due à l'ajustement effectué pour tenir compte des migrations internes dans le territoire.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[103] For 1947, *de jure* population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 1 per cent for country as a whole.

[104] Included in urban agglomeration of Buenos Aires.

[105] Includes Adrogue, Avellaneda, Lanús, Lomas de Zamora, Morón, Quilmes, San Fernando, San Isidro, San Justo, General San Martín, Tigre and Vicente Lopez.

[106] Includes Godoy Cruz (54 480), Guaymallen (44 894) and Las Heras (14 933).

[107] Includes adjustment for omissions of 20.4 per cent for La Paz and 4.5 per cent for Sucre.

[108] Beginning 1955, data refer to *municipio* which may contain a rural area as well as urban centre.

* Données provisoires.

[103] Pour 1947, population de droit effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement destiné à compenser un sous-dénombrement estimé à 1 pour cent pour l'ensemble du pays.

[104] Comprise dans l'agglomération urbaine de Buenos Aires.

[105] Y compris Adrogue, Avellaneda, Lanús, Lomas de Zamora, Morón, Quilmes, San Fernando, San Isidro, San Justo, General San Martín, Tigre et Vicente Lopez.

[106] Comprend Godoy Cruz (54 480), Guaymallen (44 894) et Las Heras (14 933).

[107] Afin de compenser les omissions, il a été tenu compte d'un ajustement de 20,4 pour cent pour La Paz et de 4,5 pour cent pour Sucre.

[108] A partir de 1955, les données se rapportent à un *municipio* qui peut comprendre une zone rurale aussi bien qu'un centre urbain.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[108] Beginning 1955, data refer to *municipio* which may contain a rural area as well as urban centre.
[109] Capital changed from Rio de Janeiro to Brasilia, 21 April 1960.

[108] A partir de 1955, les données se rapportent à un *municipio* qui peut comprendre une zone rurale aussi bien qu'un centre urbain.
[109] Le 21 avril 1960, la capitale a été transférée de Rio de Janeiro à Brasilia.

[108] Beginning 1955, data refer to *municipio* which may contain a rural area as well as urban centre.

[110] Population actually enumerated, i.e., excluding adjustment for under-enumeration estimated at 1.4 per cent in 1940 and 5.8 per cent in 1952 for country as a whole.

[111] Data for urban agglomeration refer to *circumscripciones* of Recoleta, Portales, Moneda, Universidad, Estación, Independencia, San Isidro, San Miguel, Quinta Normal, Renca, Nuñoa, Providencia, Conchalí, Barrancas, Cisterna, La Granja and Las Condes.

[108] A partir de 1955, les données se rapportent à un *municipio* qui peut comprendre une zone rurale aussi bien qu'un centre urbain.

[110] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement destiné à compenser un sous-dénombrement estimé à 1,4 pour cent en 1940 et à 5,8 pour cent en 1952 pour l'ensemble des pays.

[111] Les données relatives à l'agglomération urbaine se rapportent aux *circumscripciones* de Barrancas, Cisterna, Conchalí, Estación, Independencia, La Granja, Las Condes, Moneda, Nuñoa, Portales, Providencia, Quinta Normal, Recoleta, Renca, San Isidro, San Miguel et Universidad.

* Provisional.
[1] *De jure* population.
[8] Data refer to commune(s) which may contain rural area as well as urban centre.
[112] Population actually enumerated, i.e., excluding adjustment for under-enumeration estimated at 3 per cent for country as a whole.
[113] Of which population of three rural sectors numbered 5 294.
[114] For "metropolitan area", comprising Asunción proper, Luque (6 866) and San Lorenzo (5 995).
[115] Data refer to "metropolitan area" (Gran Lima) which for 1940 comprised the districts of Barranco (or San José de Surco), Cercado de Lima, Chorillos, La Victoria, Lince, Miraflores, Magdalena del Mar, Pueblo del Mar, Pueblo Libre (or Magdalena Vieja), Rímac, San Isidro, San Miguel, and Santiago de Surco; beginning 1955, comprises in addition Breña, Obrero Industrial "27 de Octubre" and Surquillo.
[116] Published by United Nations World Health Organization.

* Données provisoires.
[1] Population de droit.
[8] Les données se rapportent à une commune (ou des communes) pouvant comprendre une zone rurale aussi bien qu'un centre urbain.
[112] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement destiné à compenser un sous-dénombrement évalué à 3 pour cent pour l'ensemble du pays.
[113] Dont 5 294 personnes habitant trois secteurs ruraux.
[114] Zone métropolitaine constituée de la ville d'Asunción proprement dite, de Luque (6 866) et de San Lorenzo (5 995).
[115] "Zone métropolitaine" (Gran Lima) comprenant en 1940 les districts de Barranco (ou San José de Surco), Cercado de Lima, Chorillos, La Victoria, Lince, Miraflores, Magdalena del Mar, Pueblo del Mar, Pueblo Libre (ou Magdalena Vieja), Rímac, San Isidro, San Miguel et Santiago de Surco; à partir de 1955, y compris, en outre, Breña, Obrero Industrial "27 de Octubre" et Surquillo.
[116] Estimations publiées par l'Organisation mondiale de la santé.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.
[117] Data for urban agglomeration refer to "metropolitan area", comprising Caracas proper (the urban parishes of Department of Libertador) and a part of district of Sucre in State of Miranda.
[118] Comprises Tawahi or Steamer Point, Maalla, Khormaksar and Crater.
[119] For June.
[120] Excluding non-resident military and shipping personnel.
[121] Comprises Colombo municipality, Mudaliyar and Salpiti Korale.
[122] Data for 1953 and 1957 released by State Statistical Bureau, Peking.

* Données provisoires.
[117] Les données relatives à l'agglomération urbaine se rapportent à une "zone métropolitaine" comprenant la ville de Caracas proprement dite (paroisses urbaines du Département de Libertador) et une partie du district de Sucre dans l'Etat de Miranda.
[118] Comprend Crater, Khormaksar, Maalla, Tawahi ou Steamer Point.
[119] En juin.
[120] Non compris les militaires et les agents des compagnies de transports maritimes non résidents.
[121] Municipalité de Colombo, Mudaliyar et Salpiti Korale.
[122] Les données relatives à 1953 et 1957 ont été publiées par le Bureau de statistique d'Etat (Pékin).

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[125] For 1940, including residents serving in Japanese armed forces outside country. Beginning 1956, excluding armed forces and foreigners.
[126] Data are registered civilian adult population plus an estimate for children under 12 years of age.
[127] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Sikkim, the part "B" tribal areas of Assam where 1951 census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon, which became part of India 1 November 1954.
[128] For 1941 and 1951, *de jure* population.
[129] Included in urban agglomeration of Calcutta.

[125] Pour 1940, y compris les résidents servant dans les forces armées japonaises hors du pays. A partir de 1956, non compris les militaires et les étrangers.
[126] Population adulte civile enregistrée et nombre estimatif des enfants de moins de 12 ans.
[127] Non compris le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé, ni le secteur "B" de la zone des tribus d'Assam où il n'a pas été possible d'effectuer un recensement en 1951 ni les comptoirs de Karikal, Mahé, Pondichéry et Yanaon, qui font partie de l'Inde depuis le 1er novembre 1954.
[128] Pour 1941 et 1951, population de droit.
[129] Comprise dans l'agglomération urbaine de Calcutta.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[127] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Sikkim, the part "B" tribal areas of Assam where 1951 census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon, which became part of India 1 November 1954.
[128] For 1941 and 1951, *de jure* population.
[129] Included in urban agglomeration of Calcutta.
[135] Included in urban agglomeration of Delhi.
[136] Data refer to reorganized area; comparable data for 1 March 1951 are 162 488 for city proper and 194 511 for urban agglomeration.
[137] Includes Srirangam municipality.

[127] Non compris le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé, ni le secteur "B" de la zone des tribus d'Assam où il n'a pas été possible d'effectuer un recensement en 1951 ni les comptoirs de Karikal, Mahé, Pondichéry et Yanaon, qui font partie de l'Inde depuis le 1er novembre 1954.
[128] Pour 1941 et 1951, population de droit.
[129] Comprise dans l'agglomération urbaine de Calcutta.
[135] Comprise dans l'agglomération urbaine de Delhi.
[136] Nouvelle circonscription; au 1er mars 1951, les données correspondantes s'établissaient à 162 488 pour la ville proprement dite et 194 511 pour l'agglomération urbaine.
[137] Y compris la municipalité de Srirangam.

* Provisional.
[1] *De jure* population.
[139] Except for Tokyo, all city proper figures refer to *shi*, a minor civil division (or urban county) which may include some scattered or rural population as well as an urban centre. Boundaries for some cities have changed during period covered; data refer to boundaries in effect for given year. Beginning 1950, data are *de jure* population, but exclude diplomatic personnel outside country.

* Données provisoires.
[1] Population de droit.
[139] Sauf pour Tokyo, toutes les données concernant la population des villes proprement dites se rapportent à des *shi*, petites divisions administratives qui peuvent comprendre des peuplements dispersés ou ruraux en plus d'un centre urbain. Les limites de certaines villes ont été changées au cours de la période considerée; les données se rapportent aux limites existant pendant l'année en question. A partir de 1950, les données concernent la population de droit, mais non compris le personnel diplomatique hors du pays.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[139] Except for Tokyo, all city proper figures refer to *shi*, a minor civil division (or urban county) which may include some scattered or rural population as well as an urban centre. Boundaries for some cities have changed during period covered; data refer to boundaries in effect for given year. Beginning 1950, data are *de jure* population, but exclude diplomatic personnel outside country.

[139] Sauf pour Tokyo, toutes les données concernant la population des villes proprement dites se rapportent à des *shi*, petites divisions administratives qui peuvent comprendre des peuplements dispersés ou ruraux en plus d'un centre urbain. Les limites de certaines villes ont été changées au cours de la période considerée; les données se rapportent aux limites existant pendant l'année en question. A partir de 1950, les données concernent la population de droit, mais non compris le personnel diplomatique hors du pays.

[139] Except for Tokyo, all city proper figures refer to *shi*, a minor civil division (or urban county) which may include some scattered or rural population as well as an urban centre. Boundaries for some cities have changed during period covered; data refer to boundaries in effect for given year. Beginning 1950, data are *de jure* population, but exclude diplomatic personnel outside country.

[140] Included in urban agglomeration of Tokyo.

[139] Sauf pour Tokyo, toutes les données concernant la population des villes proprement dites se rapportent à des *shi*, petites divisions administratives qui peuvent comprendre des peuplements dispersés ou ruraux en plus d'un centre urbain. Les limites de certaines villes ont été changées au cours de la période considerée; les données se rapportent aux limites existant pendant l'année en question. A partir de 1950, les données concernent la population de droit, mais non compris le personnel diplomatique hors du pays.

[140] Compris dans l'agglomération urbaine de Tokyo.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.

[139] Except for Tokyo, all city proper figures refer to *shi*, a minor civil division (or urban county) which may include some scattered or rural population as well as an urban centre. Boundaries for some cities have changed during period covered; data refer to boundaries in effect for given year. Beginning 1950, data are *de jure* population, but exclude diplomatic personnel outside country.

[141] Data for city proper refer to 23 wards *(ku)* of the old City. The urban agglomeration figures refer to Tokyo-to (Tokyo Prefecture), comprising the 23 wards plus 8 urban counties *(shi)*, 24 towns *(machi)* and 15 villages *(mura)*, together covering an area of 1 155 km^2 in 1955 and 1960. There is also the "Tokyo Metropolitan Area" covering an area of 1 885 km^2 in 1960 with population of 9 330 387 on 1 October 1955 and *11,370,099 on 1 October 1960. This area comprises the 23 wards of Tokyo-to plus 21 cities, 20 towns and 2 villages. The "Keihin Metropolitan Area" (Tokyo-Yokohama Metropolitan Area) comprises the Tokyo Metropolitan Area plus 9 cities of which one is Yokohama city, and 2 towns, with a total area of 2 801 km^2 in 1960 and population of 11 409 214 on 1 October 1955 and *13 787 766 on 1 October 1960.

* Données provisoires.

[139] Sauf pour Tokyo, toutes les données concernant la population des villes proprement dites se rapportent à des *shi*, petites divisions administratives qui peuvent comprendre des peuplements dispersés ou ruraux en plus d'un centre urbain. Les limites de certaines villes ont été changées au cours de la période considerée; les données se rapportent aux limites existant pendant l'année en question. A partir de 1950, les données concernent la population de droit, mais non compris le personnel diplomatique hors du pays.

[141] Les données pour la ville proprement dite se rapportent aux 23 circonscriptions *(ku)* de la vieille ville. Les chiffres pour l'agglomération urbaine se rapportent à Tokyo-to (Préfecture de Tokyo), c'est-à-dire aux 23 circonscriptions plus 8 cantons urbains *(shi)*, 24 villes *(machi)* et 15 villages *(mura)* couvrant au total une superficie de 1 155 km^2 en 1955 et 1960. Il existe aussi la "Zone métropolitaine de Tokyo", couvrant une superficie de 1 885 km^2 en 1960, pour une population de 9 330 387 au 1er octobre 1955 et de *11 370 099 au 1er octobre 1960. Cette zone comprend les 23 circonscriptions de Tokyo-to plus 21 municipalités, 20 villes et 2 villages. La "Zone métropolitaine de Keihin" (Zone métropolitaine de Tokyo-Yokohama) comprend la Zone métropolitaine de Tokyo plus 9 municipalités dont l'une est Yokohama, et 2 villes, soit une superficie totale de 2 801 km^2 en 1960 et une population de 11 409 214 au 1 octobre 1955 et de *13 787 766 au 1er octobre 1960.

* Provisional.
[145a] Data refer to municipalities which include considerable rural area.
[146] Population estimated at 25 000-30 000.
[147] Beginning 1950, excluding Allied military and civilian personnel and their dependents stationed in the area. Data for city proper refer to *shi* (cf. [139]).
[148] Including residents serving in Japanese armed forces outside country.
[149] Excluding armed forces, foreigners, and persons in prisons, reformatories and detention homes.
[150] Includes the village of Mawashi.
[151] Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependents. For 1947, also excluding Japanese prisoners of war.
[152] Data based on results of a demographic and economic sample survey.
[153] Headquarters of the British Political Agent for the Trucial States; there is no capital.

* Données provisoires.
[145a] Les données se rapportent à des municipalités qui comprennent de vastes zones rurales.
[146] Population estimée de 25 000 à 30 000 personnes.
[147] A partir de 1950, non compris les militaires et les civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant. Les données pour la ville proprement dite se rapportent au *shi* (cf. [139]).
[148] Y compris les résidents servant dans les forces armées japonaises hors du pays.
[149] Non compris les militaires, les étrangers, ainsi que les détenus des prisons et des établissements de redressement et d'internement.
[150] Y compris le village de Mawashi.
[151] Non compris les personnes de passage à bord de navires, ni les militaires et agents civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant. Pour 1947, non compris également les prisonniers de guerre japonais.
[152] D'après les résultats d'une enquête démographique et économique par sondage effectuée en 1954-1956.
[153] Résidence officielle de l'Agent politique du Royaume-Uni pour les Etats sous régime de traité; il n'y a pas de capitale.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[8] Data refer to commune(s) which may contain rural area as well as urban centre.

[161] Resident population of "Metropolitan France" only. Data for cities proper refer to communes which may include some rural population while excluding parts of the urban agglomeration located in neighbouring communes.

[162] Department of Seine.

[163] Comprising commune of Paris, 50 urban communes in Department of Seine and 5 communes in Department of Seine-et-Oise. The population of "Greater Paris", comprising Department of Seine, commune of Versailles and several other communes in each of Department of Seine-et-Marne and Seine-et-Oise, was 6 436 296.

[164] For population of capital, see East Berlin, shown separately below.

[165] *De jure* population. For 1946, excluding prisoners of war, civilian internees and refugees in transit camps, together numbering 133 327 for Eastern Germany, 247 240 for the Federal Republic of Germany, 3 756 for Berlin, 1 397 for East Berlin and 2 359 for West Berlin.

[8] Les données se rapportent à une commune (ou des communes) pouvant comprendre une zone rurale aussi bien qu'un centre urbain.

[161] Population résidente de la "France métropolitaine" seulement. Les données concernant les villes proprement dites se rapportent à des communes qui peuvent comprendre des peuplements ruraux, tout en excluant les parties de l'agglomération urbaine situées sur le territoire de communes avoisinantes.

[162] Département de la Seine.

[163] Commune de Paris, plus 50 communes urbaines du Département de la Seine et 5 communes du Département de la Seine-et-Oise. Le "Grand Paris", à savoir Département de la Seine, commune de Versailles et plusieurs autres communes des Départements de la Seine-et-Marne et de la Seine-et-Oise, comptait 6 436 296 habitants.

[164] Pour la capitale, voir plus loin, rubrique spéciale : "Berlin-Est".

[165] Population de droit. Pour 1946, non compris les prisonniers de guerre, les civils internés et les réfugiés dans les camps de passage, soit au total 133 327 personnes pour l'Allemagne orientale, 247 240 pour la République fédérale d'Allemagne, 3 756 pour Berlin, dont 1 397 pour Berlin-Est et 2 359 pour Berlin-Ouest.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[1] *De jure* population.
[170] Data for urban agglomeration refer to Dublin proper, suburbs and adjoining borough of Dun Laoghaire.
[171] Data for urban agglomerations refer to commune which may contain rural areas; city proper is urban centre of commune.

[1] Population de droit.
[170] Les données relatives à l'agglomération urbaine se rapportent à la ville proprement dite, à la zone suburbaine et au *borough* de Dun Laoghaire.
[171] Les données relatives aux agglomérations urbaines se rapportent aux communes, lesquelles peuvent renfermer des zones rurales; la ville proprement dite est le centre urbain de la commune.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[1] *De jure* population.
[171] Data for urban agglomerations refer to commune which may contain rural areas; city proper is urban centre of commune.

[1] Population de droit.
[171] Les données relatives aux agglomérations urbaines se rapportent aux communes, lesquelles peuvent renfermer des zones rurales; la ville proprement dite est le centre urbain de la commune.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

[1] *De jure* population.
[8] Data refer to commune(s) which may contain rural area as well as urban centre.
[174] Data for urban agglomerations refer to *municipios*.
[175] Data for cities proper refer to county boroughs, municipal boroughs and urban districts. For further information, see *Demographic Yearbook* 1957, p. 159.
[176] Included in urban agglomeration of Liverpool.
[177] Comprises West Midland conurbation, of which Birmingham is the nucleus. Includes urban agglomeration of Walsall and Wolverhampton.

[1] Population de droit.
[8] Les données se rapportent à une commune (ou des communes) pouvant comprendre une zone rurale aussi bien qu'un centre urbain.
[174] Les données pour les agglomérations urbaines se rapportent aux *municipios*.
[175] Les données concernant les villes proprement dites se rapportent à des *County Boroughs, Municipal Boroughs* et *Urban Districts*. Pour plus de détails, voir *l'Annuaire démographique* 1957, page 159.
[176] Comprise dans l'agglomération urbaine de Liverpool.
[177] Ensemble urbain des Midlands de l'Ouest, dont Birmingham est le centre. Y compris les agglomérations de Walsall et Wolverhampton.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional. [1] *De jure* population.

[175] Data for cities proper refer to county boroughs, municipal boroughs and urban districts. For further information, see *Demographic Yearbook 1957*, p. 159.

[190] Comprises Central Clydeside conurbation, of which Glasgow is the nucleus.

[191] Data for urban agglomerations refer to metropolitan areas defined for census purposes and normally comprising city proper (municipality) and contiguous urban areas.

* Données provisoires. [1] Population de droit.

[175] Les données concernant les villes proprement dites se rapportent à des *County Boroughs, Municipal Boroughs* et *Urban Districts*. Pour plus de détails, voir *l'Annuaire démographique 1957*, page 159.

[190] Ensemble urbain du cours moyen de la Clyde, dont Glasgow est le centre.

[191] Les données relatives aux agglomérations urbaines se rapportent aux zones métropolitaines définies aux fins du recensement, c'est-à-dire en général à la ville proprement dite (municipalité) et à la zone urbaine contiguë.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

* Provisional.
[1] *De jure* population.
[166] Excluding armed forces.
[191] Data for urban agglomerations refer to metropolitan areas defined for census purposes and normally comprising city proper (municipality) and contiguous urban areas.
[192] For administrative centre, see Port Moresby in Papua.
[193] Excludes Maori population.
[194] Data for 1951 and subsequent years are for revised Metropolitan Area which excludes Hutt.
[195] Administrative centre for Papua and New Guinea (Australia).
[195a] Urban agglomeration is Apia Urban Area.

* Données provisoires.
[1] Population de droit.
[166] Non compris les militaires.
[191] Les données relatives aux agglomérations urbaines se rapportent aux zones métropolitaines définies aux fins du recensement, c'est-à-dire en général à la ville proprement dite (municipalité) et à la zone urbaine contiguë.
[192] Pour le centre administratif, voir Port Moresby dans le Papua.
[193] Non compris les Maoris.
[194] A partir de 1951, zone métropolitaine modifiée non compris Hutt.
[195] Centre administratif pour le Papua et la Nouvelle-Guinée (Australie).
[195a] Agglomération urbaine se rapporte à la Zone urbaine d'Apia.

7. Population of capital cities and cities of 100 000 and more inhabitants (continued)— Population des capitales et des villes de 100 000 habitants et plus (suite)

8. Population in localities of 100 000 and more and 20 000 and more inhabitants
Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus : 1920-1961

[(E) indicates an estimate of population, otherwise data refer to national population census returns. Percentages are the population in localities of 100 000 and more inhabitants and 20 000 and more inhabitants per 100 total population. For discussion, see page 33. — (E) indique qu'il s'agit d'une estimation de population, sinon les chiffres se rapportent à des recensements nationaux. Les pourcentages représentent la proportion de la population des localités de 100 000 habitants et plus et de 20 000 habitants et plus par rapport à la population totale. Voir explications à la page 82.]

[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[3] Excluding Southern Territories, with population numbering 816 993, and 77 701 persons in institutions.
[4] Excluding persons in institutions (42 917), personnel in military establishments (53 374), merchant seamen (872), armed forces and diplomatic personnel stationed outside country and some of the Moslem workers in France.
[5] Indigenous population only.
[6] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.
[7] Data based on results of a census of non indigenous population in 1951 and an estimate of indigenous population in 1952.
[8] For Douala; based on results of census of 1955-1956 of African population which gave a total of 119 000 including 5 per cent adjustment for underenumeration, and of census of 15 January 1957 of non-indigenous *de jure* population which gave a total of 5 734.
[9] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August.
[10] African population only.
[11] Formerly Belgian Congo; declared independent 30 June 1960.
[12] Excluding Asiatic and Coloured populations.

[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[3] Non compris les territoires du Sud (816 993 habitants) ni les personnes vivant dans des institutions (77 701).
[4] Non compris les personnes vivant dans des institutions (42 917), les militaires dans les établissements militaires (53 374), les marins de commerce (872), les militaires et le personnel diplomatique en poste hors du pays, ainsi que certains travailleurs musulmans en France.
[5] Population indigène seulement.
[6] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[7] D'après les résultats du recensement de la population non indigène de 1951 et une estimation de la population indigène en 1952.
[8] Douala; d'après les résultats du recensement de la population africaine de 1955-1956 qui a donné un total de 119 000 habitants compte tenu d'un ajustement de 5 pour 100 pour sous-dénombrement, et les résultats du recensement du 15 janvier 1957 de la population non indigène de droit qui a donné un total de 5 734.
[9] Ce pays, qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu à la fin de 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août.
[10] Population africaine seulement.
[11] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[12] Non compris les personnes d'origine asiatique et les personnes de couleur.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[10] African population only.
[18] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.
[19] For 1951, Moroccan Jewish and non-Moroccan population; for 1952, *de jure* count of Moroccan Moslem population.
[20] Includes estimate for former Zone of Tangier.
[21] Former British dependency; declared independent 1 October 1960.
[22] Note suppressed.
[23] Data based on results of 1950 demographic sample survey of indigenous African population only.
[24] Non-indigenous population and "Africans in employment" only.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[10] Population africaine seulement.
[18] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.
[19] Pour 1951, population juive marocaine et population non marocaine; pour 1952, population musulmane marocaine de droit.
[20] Compte tenu d'une estimation pour l'ancienne Zone de Tanger.
[21] Ancienne possession britannique proclamée indépendante le 1er octobre 1960.
[22] Note supprimée.
[23] D'après les résultats de l'enquête démographique par sondage de 1950 portant sur la population africaine indigène seulement.
[24] Population non indigène et "Africains occupant un emploi" seulement.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.

[14] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Senegal, 20 June.

[15] Based on results of municipal census.

[25] For Commune of Dakar, comprising city proper, the suburban villages and Gorée.

[26] Including data for Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa (population 3 329 in 1951).

[27] Population enumerated in Police Zone plus an estimate of 227 776 for native and Coloured (mixed) population living outside the Zone.

[27a] Data are results of sample census of population covering 1 700 000 persons, representing 10 per cent of rural and nomad population and 100 per cent of that in 68 towns.

[28] Population actually enumerated, excluding adjustment for underenumeration estimated at 8 per cent.

[29] Excluding non-African armed forces.

[30] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.

[31] For localities of 25 000 or more inhabitants.

* Données provisoires.

[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.

[14] Ce pays, qui faisait partie de l'ancienne Afrique-Occidentale française est devenu à la fin de 1958 une République à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Sénégal, le 20 juin.

[15] D'après les résultats d'un recensement municipal.

[25] Commune de Dakar, c.à.d. la ville proprement dite, les villages suburbains et Gorée.

[26] Y compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.

[27] Population dénombrée dans la Zone de police, plus 227 776 indigènes et personnes de couleur (métis) (estimation) vivant en dehors de la Zone.

[27a] Résultats d'un recensement par sondage de la population ayant porté sur 1 700 000 personnes, soit 10 pour 100 de la population rurale et de la population nomade et 100 pour 100 de la population de 68 villes.

[28] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement estimé à 8 pour 100.

[29] Non compris les militaires non africains.

[30] Non compris les réfugiés algériens temporairement dans le pays; 180 000 en 1959 (estimation).

[31] Localités de 25 000 habitants au moins.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

[See note at head of table. — Voir note au début du tableau.]

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[31] For localities of 25 000 or more inhabitants.
[32] Excluding nomad population.
[33] Data are based on pre-censal house listing.
[34] Excludes tourists and members of UK and US armed forces and their dependants stationed in the area.
[35] Prior to 1951, excluding Newfoundland.
[36] *De jure* population, but including armed forces stationed in the area.
[37] Marked increase due to expansion of the metropolitan area of San Jose. For details, see Table 7.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[31] Localités de 25 000 habitants au moins.
[32] Non compris les nomades.
[33] Données provenant d'un relevé des logements antérieures au recensement.
[34] Non compris les touristes et les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire, ainsi que les personnes à leur charge les accompagnant.
[35] Pour les années antérieures à 1951, non compris Terre-Neuve.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[37] Cet accroissement marqué est dû à l'extension de la zone métropolitaine de San José. Pour plus de détails, voir tableau 7.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[31] For localities of 25 000 or more inhabitants.
[36] *De jure* population, but including armed forces stationed in the area.
[42] Excluding data for Canal Zone.
[43] Note suppressed.
[44] Marked increase due to expansion of the city proper of Panama City. For details, see Table 7.
[45] Includes Río Piedras, a separate city in 1950, now annexed to San Juan.
[46] *De jure* population, but excluding armed forces outside continental United States estimated at 117 000 in 1920, 89 000 in 1930, 119 000 in 1940 and 435 000 (1950). Also excluding Alaska and Hawaii which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively.
[47] Population actually enumerated, excluding adjustment for net underenumeration estimated to be at least 2 5 per cent (3 800 000).

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[31] Localités de 25 000 habitants au moins.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[42] Non compris la Zone du Canal.
[43] Note supprimée.
[44] Cet accroissement marqué est dû à l'extension de la ville proprement dite de Panama. Pour plus de détails, voir tableau 7.
[45] Río Piedras, commune distincte en 1950, a été annexée à San Juan.
[46] Population de droit, mais non compris les militaires se trouvant hors des Etats-Unis continentaux, soit 117 000 en 1920, 89 000 en 1930, 119 000 en 1940 et 435 000 en 1950 (estimations). Non compris également l'Alaska et Hawaii qui sont devenus les 49ème et 50ème Etats de l'Union, le 3 janvier et 21 août 1959 respectivement.
[47] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement net estimé à 2,5 pour 100 au moins (3 800 000).

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

[See note at head of table. — Voir note au début du tableau.]

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[15] Based on results of municipal census.
[36] *De jure* population, but including armed forces stationed in the area.
[48] Except for territories shown below, there are no localities of 20 000 or more in the West Indies.
[49] Data based on results of a demographic sample survey covering approximately 5 per cent of households in Kingston Metropolitan Area and 10 per cent of households in rural areas.
[49a] Includes population in rural area of St. Andrew Parish.
[50] Population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[51] For 5 September.
[52] For total population, including adjustment of 8.4 per cent (227 866) for underenumeration and estimate of 87 000 for tribal Indian population; for population of locality given, including adjustment of 20.4 per cent for omissions.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[15] D'après les résultats d'un recensement municipal.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[48] En dehors des territoires indiqués, les Indes occidentales ne comprennent pas de localités de 20 000 habitants ou plus.
[49] D'après les résultats d'une enquête démographique par sondage ayant couvert environ 5 pour 100 des ménages de la zone métropolitaine de Kingston et 10 pour 100 des ménages des zones rurales.
[49a] Y compris la population de la région rurale de la paroisse Saint-Andrew.
[50] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 1 pour 100 pour dénombrement.
[51] Au 5 septembre.
[52] Population totale : compte tenu d'un ajustement de 8,4 pour 100 (227 866) pour sous-dénombrement et de 87 000 (estimation) Indiens vivant en tribus; population de la localité indiquée : compte tenu d'un ajustement de 20,4 pour 100 pour omissions.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.

[61] Population actually enumerated, but excluding 12 881 schedules not tabulated by size of localities. Excluding also 17 000 for Indian jungle population and adjustment of 50 067 for underenumeration.

[62] Includes Indian jungle population, estimated at 350 000, and 465 144 for omissions.

[63] Excluding Indian and Negro population living in tribes, estimated at 26 000.

[64] Excluding Indian jungle population, numbering 136 147 in 1926, 103 492 in 1936, 100 600 in 1941 and 56 705 in 1950.

[65] Excluding military personnel and data for port and Perim.

[66] Excluding Perim.

[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.

[61] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés selon l'importance de la localité. Non compris également 17 000 (estimation) Indiens de la jungle et compte non tenu d'un ajustement de 50 067 pour sous-dénombrement.

[62] Y compris les Indiens de la jungle estimés à 350 000 et compte tenu d'un ajustement de 465 144 pour omissions.

[63] Non compris les Indiens et les noirs vivant en tribus, estimés à 26 000.

[64] Non compris les Indiens de la jungle (136 147 en 1926, 103 492 en 1936, 100 600 en 1941 et 56 705 en 1950).

[65] Non compris les militaires et compte non tenu du port et de Perim.

[66] Non compris Perim.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[31] For localities of 25 000 or more inhabitants.
[67] Excluding alien armed forces, merchant seamen and foreign diplomatic personnel, but including civilian aliens.
[68] For 1 July.
[68a] Based on results of the first stage of a multi-stage sample census covering the population in 252 towns approximating the urban area of the Union.
[69] Excluding non-resident military and shipping personnel, numbering 36 606 at 1946 census.
[70] Beginning 1956, excluding armed forces and foreigners.
[71] Including residents serving in Japanese armed forces outside country.
[72] Excluding military personnel in camps and persons in special internment camps, numbering 4 940 and 7 482 respectively.
[73] Excluding transients afloat. For 1947, also excluding non-locally domiciled military and civilian services personnel and their dependants and Japanese prisoners of war, together numbering 14 735.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[31] Localités de 25 000 habitants au moins.
[67] Non compris les militaires étrangers, les marins de commerce et le personnel diplomatique étranger, mais y compris les civils étrangers.
[68] Au 1er juillet.
[68a] D'après les résultats du premier degré d'une enquête par sondage à plusiers degrés; population de 252 villes seulement, correspondant approximativement aux zones urbaines de l'Union.
[69] Non compris les militaires et les agents des compagnies de transports maritimes non résidents, au nombre de 36 606 lors du recensement de 1946.
[70] A partir de 1956, non compris les militaires et les étrangers.
[71] Y compris les résidents servant dans les forces armées japonaises hors du pays.
[72] Non compris 4 940 militaires se trouvant dans des camps et 7 482 personnes se trouvant dans des camps d'internement spéciaux.
[73] Non compris les personnes de passage à bord de navires. Pour 1947, non compris également les militaires et les fonctionnaires domiciliés en dehors du territoire, ainsi que les personnes à leur charge les accompagnant et les prisonniers de guerre japonais, soit au total 14 735 personnes.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[74] Pre-partition India, i.e., including Pakistan and Sikkim and, for 1921, Aden Colony, but excluding Burma and, for 1931 and 1941, Aden, separated from India in 1937 and 1932 respectively. For population of localities given, excluding persons in encampments, boats and railway settlements.
[75] *De jure* population. Excluding Kashmir-Jammu the final status of which has not yet been determined, the Part "B" tribal areas of Assam, where census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon, which became part of India 1 November 1954.
[76] Including estimate for Kashmir-Jammu, the final status of which has not yet been determined.
[77] Note suppressed.
[78] Estimate for 15 May.
[79] Prior to 1955, excluding Tokara Archipelago and Amami Islands, acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953 respectively. Beginning 1946, excluding Allied military and civilian personnel and their dependants. Beginning 1955, *de jure* population.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[74] Inde avant le partage, c.à.d. y compris le Pakistan et Sikkim et pour 1921 la colonie d'Aden, mais non compris la Birmanie et pour 1931 et 1941 Aden détachés de l'Inde en 1937 et 1932 respectivement. Population des localités indiquées : non compris les personnes se trouvant dans des campements, à bord de navires ou dans les cités des chemins de fer.
[75] Population de droit. Non compris le Cachemire-Jammu dont le statut définitif n'a pas été encore déterminé, les zones tribales (partie B) de l'Assam où le recensement n'a pu avoir lieu et les établissements de Karikal, Mahé, Pondichéry et Yanaon rattachés à l'Inde le 1er novembre 1954.
[76] Y compris une estimation pour le Cachemire-Jammu dont le statut définitif n'a pas été encore déterminé.
[77] Note supprimée.
[78] Estimation au 15 mai.
[79] Pour les années antérieures à 1955, non compris l'archipel des Tokara et les îles Amami, détachés des Ryû-Kyû le 5 décembre 1951 et le 25 décembre 1953 respectivement. A partir de 1946, non compris les militaires et le personnel civil alliés ainsi que les personnes à leur charge les accompagnant. A partir de 1955, population de droit.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[2] *De jure* population.
[31] For localities of 25 000 or more inhabitants.
[79] Prior to 1955, excluding Tokara Archipelago and Amami Islands, acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953 respectively. Beginning 1946, excluding Allied military and civilian personnel and their dependants. Beginning 1957, *de jure* population.
[80] Excluding military personnel and foreigners.
[81] Excluding foreigners and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated.
[82] Data adjusted for underenumeration due to flood conditions at time of census.
[83] Data based on results of a census of housing. A census of population has never been taken in Jordan.
[84] Prior to 1959, excluding alien armed forces, civilian aliens employed by armed forces, and foreign diplomatic personnel. For 1959, excluding foreigners and armed forces. Prior to 1950, data refer to the area south of the 38th parallel.
[85] Believed to be much higher.
[86] Lebanese nationals only.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[2] Population de droit.
[31] Localités de 25 000 habitants au moins.
[79] Pour les années antérieures à 1955, non compris l'archipel des Tokara et ls îles Amami, détachés des Ryû-Kyû le 5 décembre 1951 et le 25 décembre 1953 respectivement. A partir de 1946, non compris les militaires et le personnel civil alliés ainsi que les personnes à leur charge les accompagnant. A partir de 1957, population de droit.
[80] Non compris les militaires et les étrangers.
[81] Non compris les étrangers et les personnes originaires de Corée, de Formose et des Ryû-Kyû qui ont demandé leur rapatriement.
[82] Compte tenu d'un ajustement pour sous-dénombrement dû aux inondations qui se sont produites au moment du recensement.
[83] D'après les résultats d'un recensement de l'habitation. Aucun recensement de la population n'a été effectué en Jordanie.
[84] Pour les années antérieures à 1959, non compris les militaires étrangers, les civils étrangers employés par les forces armées et le personnel diplomatique étranger. Pour 1959, non compris les étrangers et les militaires. Pour les années antérieures à 1950, territoire au sud du 38ème parallèle.
[85] Probablement très inférieur à la réalité. [86] Nationaux libanais seulement.

8. Population in localities of 100 000 and more and 20 000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

* Provisional.
[1] For explanation of code for type of locality and for detailed descriptions of localities by country, see end of table.
[31] For localities of 25 000 or more inhabitants.
[36] *De jure* population, but including armed forces stationed in the area.
[107] Excluding full-blooded aborigines.
[108] Including condominium of Canton and Enderbury Islands.
[109] For 30 June.
[109a] Territory of 1923-1928.
[110] Data include an estimate for the western province of the Byelorussian SSR and of the Ukrainian SSR, the Estonian SSR, the Latvian SSR, the Lithuanian SSR, and the Moldavian SSR.
[111] For 31 December 1954.
[112] For 31 December 1955.

* Données provisoires.
[1] Voir à la fin du tableau l'explication du code employé pour indiquer le type de localité, ainsi que les descriptions détaillées des localités pour certains pays.
[31] Localités de 25 000 habitants au moins.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[107] Non compris les aborigènes de pure race.
[108] Non compris le condominium des îles Canton et Enderbury.
[109] Au 30 juin.
[109a] Territoire de 1923-1928.
[110] Les données comprennent une estimation pour les provinces occidentales de la RSS de Biélorussie et de la RSS d'Ukraine, pour la RSS d'Estonie, la RSS de Lettonie, la RSS de Lituanie et la RSS de Moldavie.
[111] Au 31 décembre 1954.
[112] Au 31 décembre 1955.

8. Population in localities of 100 000 and more and 20,000 and more inhabitants (continued)— Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

Type of locality

NOTE: Localities are classified by type as follows: **a**—agglomerations without regard to fixed boundaries; **b**—localities with fixed boundaries, commonly under the jurisdiction of local or "urban" forms of government; **c**—relatively small or smallest administrative subdivisions having fixed boundaries and, in sum, comprising the entire country. Detailed descriptions by country are given below.

AFRICA

Algeria. Type **b**: administrative centres of communes.

Bechuanaland. Type **b**: villages.

Réunion. Type **c**: communes.

Rhodesia and Nyasaland, Federation of:

Northern Rhodesia. Type **a**: main European towns, including all neighboring mines, locations and compounds.

Southern Rhodesia. Type **a**: principal towns and villages, described as urban municipalities, urban townships, urban villages, rural suburbs and rural townships.

Sudan. Type **a**: Khartoum, Khartoum North and Omdurman.

Union of South Africa. Type **a**: major cities, the parent municipality and the suburbs adjoining, and towns, villages and townships.

Zanzibar. Type **b**: for 1948, administrative units called *mudiria*. For 1958, township areas.

NORTH AMERICA

Bermuda. Type **b**: city of Hamilton and town of St. George.

British Honduras. Type **b**: city of Belize.

Canada. Type **b**: incorporated cities, towns and villages.

Costa Rica. For 1927, type **c**: cantons. For 1950, type **a**: administrative centre of canton. Beginning 1951, type **a**: urban agglomeration of San José.

Cuba. Type **b**: cities.

Dominican Republic. Type **b**: Administrative centres of communes and municipal districts, some of which include suburban zones of a rural character.

El Salvador. For 1930, type **c**: *municipios*. Beginning 1946, type **b**: administrative centres of *municipios*.

Greenland. Type **a**: communes.

Guatemala. For 1940, type **c**: *municipios*. Beginning 1946, type **b**: administrative centres of *municipios*.

Haiti. Type **b**: administrative centres of communes.

Honduras. For 1945 and 1950, type **b**: administrative centres of districts and *municipios*. For 1958 and 1959, type **a**: urban agglomeration of Tegucigalpa.

Mexico. Type **b**: cities.

Nicaragua. Type **b**: administrative centres of *municipios*.

Panama. Type **b**: city administrative centres of districts.

Puerto Rico. Type **b**: cities towns and villages of 500 or more inhabitants.

United States. Type **b**: "urban population" as defined in 1940, which refers to all persons living in incorporated places of 2 500 inhabitants or more and in other areas classified as urban under special rules relating to size and density.

Type de localité

NOTE : Les localité sont classées de la façon suivante : **a** — agglomérations pour lesquelles on ne tient pas compte des limites officielles; **b** — localités aux limites définies, dotées d'une forme quelconque d'administration locale ou "urbaine"; **c** — subdivisions administratives secondaires ou du dernier degré, aux limites définies, et dont l'ensemble correspond à la superficie totale du pays. Les descriptions détaillées dont on dispose au sujet des divers pays sont données ci-dessous.

AFRIQUE

Algérie. Type **b**: chefs-lieux de communes.

Bechuanaland. Type **b**: villages.

Réunion. Type **c**: communes.

Rhodésie et Nyassaland, Fédération de:

Rhodésie du Nord. Type **a**: principales villes européennes, y compris les mines, réserves et *compounds* avoisinants.

Rhodésie du Sud. Type **a**: principales villes et principaux villages officiellement connus sous le nom de: municipalités urbaines, communes urbaines, villages urbaines, faubourgs ruraux et communes rurales.

Soudan. Type **a**: Khartoum, Khartoum-Nord et Omdurman.

Union sud-africaine. Type **a**: villes principales, c'est-à-dire les centres municipaux et leurs faubourgs, villes, villages et communes.

Zanzibar. Type **b**: pour 1948, circonscriptions administratives appelées *mudiria*. Pour 1958, zones urbaines.

AMERIQUE DU NORD

Bermudes. Type **b**: Hamilton City et St. George Town.

Honduras britannique. Type **b**: ville de Belize.

Canada. Type **b**: villes et villages érigés en municipalités.

Costa Rica. Pour 1927, type **c**: cantos. Pour 1950, type **a**: chef-lieu de canton. A partir de 1951, type **a**: agglomération urbaine de San José.

Cuba. Type **b**: villes.

République Dominicaine. Type **b**: chefs-lieux de communes et de districts municipaux, comprenant dans certains cas des zones suburbaines de caractère rural.

Salvador. Pour 1930, type **c**: *municipios*. A partir de 1946, type **b**: chefs-lieux de *municipios*.

Groenland. Type **a**: communes.

Guatemala. Pour 1940, type **c**: *municipios*. A partir de 1946, type **b**: chefs-lieux de *municipios*.

Haïti. Type **b**: chefs-lieux de communes.

Honduras. Pour 1945 et 1950, type **b**: chefs-lieux de districts et de *municipios*. Pour 1958 et 1959, type **a**: agglomération urbaine de Tegucigalpa.

Mexique. Type **b**: villes.

Nicaragua. Type **b**: chefs-lieux de *municipios*.

Panama. Type **b**: chefs-lieux de districts.

Porto-Rico. Type **b**: villes et villages de 500 habitants au moins.

Etats-Unis. Type **b**: "population urbaine" répondant à la définition de 1940, c.à.-d. toutes les personnes vivant dans des agglomérations de 2 500 habitants au moins érigées en municipalitiés, et dans d'autres zones classées comme urbaines en vertu de règles spéciales relatives à la superficie et à la densité.

8. Population in localities of 100 000 and more and 20,000 and more inhabitants (continued)—Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

Type of locality (continued)

NORTH AMERICA (continued)

West Indies:

Barbados. Type c: parishes.

Jamaica. Type a: metropolitan area embracing Kingston and the urban sector of St. Andrew's Parish. For 1955-1957, including rural sector of St. Andrew's Parish.

Trinidad and Tobago. Type b: cities.

SOUTH AMERICA

Argentina. Type b: agglomerations which have urban characteristics.

Bolivia. Type b: city of La Paz.

Brazil. Type b: urban and suburban zones of administrative centres of *municipios.*

Chile. Type b: cities, but including urban agglomeration of Santiago.

Colombia. Type b: capital cities of departments.

Ecuador. Type b: prior to 1960, capitals of provinces and cantons.

Paraguay. Type b: prior to 1960, administrative centres of *municipios.*

Peru. Type b: capitals of departments and provinces.

Uruguay. Type b: city of Montevideo.

Venezuela. Type b: populated centres, i.e., cities, towns, *caserios, aldeas,* and *vencindarios.* petroleum and mine camps, *haciendas, fundos, hatos,* plantations, etc.

ASIA

Ceylon. Type b: locality of 100 000 and more inhabitants refers to Colombo Municipal Council.

Japan. Type c: *shi,* a minor civil division (or urban county) which may include some scattered or rural population as well as an urban centre. Beginning 1945, data for Tokyo refer to *ku*-area (23 wards) of the old City only.

Macau. Type b: Area Maritime and Concelho de Macau.

Ryukyu Islands. Type c: cities *(shi),* towns *(cho* or *machi)* and townships *(son* or *mura).*

EUROPE

Albania. Type c: cities.

Austria: Type c: communes.

Belgium. Type c: communes.

Bulgaria. Type b: towns.

Denmark. Type a: agglomerations of 250 or more inhabitants.

Finland. Type b: cities.

France. Type c: communes.

Germany:

East Germany. Type c: communes.

Federal Republic of Germany. Type c: communes.

Saar. Type c: communes.

Hungary. Type b: large communities, county towns and municipalities.

Iceland. Type a: agglomerations of 300 or more inhabitants.

Ireland. Type b: cities.

Type de localité (suite)

AMERIQUE DU NORD (suite

Indes occidentales:

Barbade. Type c: paroisses.

Jamaïque. Type a: zone métropolitaine comprenant Kingston et le secteur urbain de la paroisse de St. Andrew. Pour 1955-1957, y compris le secteur rural de la paroisse de St. Andrew.

Trinité et Tobago. Type b: villes.

AMERIQUE DU SUD

Argentine. Type b: agglomérations ayant des caractéristiques urbaines.

Bolivie. Type b: ville de la Paz.

Brésil. Type b: zones urbaines et suburbaines des chefs-lieux de *municipios.*

Chili. Type b: villes, y compris également l'agglomération urbaine de Santiago.

Colombie. Type b: chefs-lieux de départements.

Equateur. Type b: avant 1960, chefs-lieux de provinces et de cantons.

Paraguay. Type b: avant 1960, chefs-lieux de *municipios.*

Pérou. Type b: chefs-lieux de départements et de provinces.

Uruguay. Type b: ville de Montevideo.

Venezuela. Type b: centres habités, c'est-à-dire villes, *caserios, aldeas* et *vecindarios,* camps situés près des puits de pétrole et des mines, *haciendas, fundos, hatos,* plantations, etc.

ASIE

Ceylan. Type b: la localité de 100 000 habitants et plus se rapporte au Colombo Municipal Council.

Japon. Type c: *shi,* petites divisions administratives qui peuvent comprendre des peuplements dispersés ou ruraux en plus d'un centre urbain. A partir de 1945, les données pour Tokyo se rapportent aux *ku* (23 circonscriptions) de la vieille ville seulement.

Macao. Type b: Zone Maritime et Concelho de Macao.

Iles Ryû-Kyû. Type c: villes *(shi, chou* ou *machi)* et communes *(son* ou *mura).*

EUROPE

Albanie. Type b: villes.

Autriche. Type c: communes.

Belgique. Type c: communes.

Bulgarie. Type b: villes.

Danemark. Type a: agglomérations de 250 habitants et plus.

Finlande. Type b: villes.

France. Type c: communes.

Allemagne:

Allemagne orientale. Type c: communes.

République fédérale d'Allemagne. Type c: communes.

Sarre. Type c: communes.

Hongrie. Type b: grandes agglomérations, bourgs et municipalités.

Islande. Type a: agglomérations de 300 habitants et plus.

Irlande. Type b: villes.

8. Population in localities of 100 000 and more and 20,000 and more inhabitants (continued)—Population des localités de 100 000 habitants et plus et de 20 000 habitants et plus (suite)

Type of locality (continued)

EUROPE (continued)

Italy. Type c: communes.

Luxembourg. Type c: communes.

Netherlands. For 1947, type a: clusters, i.e., areas with closely spaced housing within the administrative municipalities. Beginning 1955, type b: cities.

Norway. For 1946 and 1950, type a: cities and suburbs. Beginning 1955, type b: cities.

Poland. Type b: towns.

Portugual. Type b: cities.

Spain. Type c: *municipios.*

Sweden. Type a: densely populated places either within or outside towns, boroughs, and *municipalsamhällen.*

Switzerland. Type c: communes.

United Kingdom:

England and Wales. Type a: for 1931 and 1951, conurbations, other urban areas, and civil parishes in rural districts outside conurbations. For 1955-1958, conurbations, boroughs and urban districts.

Scotland. Type b: cities and all burghs, towns and villages.

Yugoslavia. Type b: for 1948, territories under the jurisdiction of local People's Committee's and urban territories. For 1953, cities.

OCEANIA

Australia. Type a: urban metropolitan areas.

Cook Islands. Type c: islands.

Fiji. Type b: towns and villages.

Gilbert and Ellice. Type b: villages.

Guam. Type b: one city, 19 villages.

UNION OF SOVIET SOCIALIST REPUBLICS

USSR. Type b: cities and urban-type settlements.

Type de localité (suite)

EUROPE (suite)

Italie. Type c: communes.

Luxembourg. Type c: communes.

Pays-Bas. Pour 1947, type a: agglomérations, c-est-à-dire zones à peuplement dense, situées à l'intérieur des limites administratives des municipalités. A partir de 1955, type b: villes.

Norvège. Pour 1946 et 1950, type a: villes et banlieues. A partir de 1955, type b: villes.

Pologne: Type b: villes.

Portugal. Type b: villes.

Espagne. Type c: *municipios.*

Suède. Type a: zones à forte densité de population, situées ou non à l'intérieur des villes, bourgs et *municipalsamhällen.*

Suisse. Type c: communes.

Royaume-Uni:

Angleterre et Pays de Galles. Type a: pour 1931 et 1951, conurbations, autres zones urbaines et paroisses civiles situées dans des districts ruraux à l'extérieur de conurbations. Pour 1955-1958, conurbations, bourgs et districts urbains.

Ecosse. Type b: villes, bourgs et villages.

Yougoslavie. Type b: pour 1948, unités administrées par un comité municipal du peuple et zones urbaines. Pour 1953, villes.

OCEANIE

Australie. Type a: zones urbaines métropolitaines.

Iles Cook. Type c: îles.

Iles Fidji. Type b: villes et villages.

Gilbert et Ellice. Type b: villages.

Guam. Type b: une ville et 19 villages.

UNION DES REPUBLIQUES SOCIALISTES SOVIETIQUES

URSS. Type b: villes et agglomérations de type urbain.

9. Urban and total population by sex — Population urbaine et population totale selon le sexe : 1920-1960

[For definitions of "urban," see end of table. (E) indicates an estimate of population, otherwise data refer to censuses. Percentages are the population defined as "urban" per 100 total population for males, females and both sexes. For discussion, see page 33. — Pour les définitions du terme "urbain," voir à la fin du tableau. (E) indique qu'il s'agit d'une estimation de population, sinon les chiffres se rapportent à des recensements. Les pourcentages représentent la proportion de la population définie comme "urbaine" par rapport à la population totale, séparément pour chaque sexe et pour les deux sexes. Voir explications à la page 83.]

* Provisional.
[1] *De jure* population but excluding persons in institutions and personnel in military establishments. Prior to 1954, excluding population of Southern Territories, numbering 816 993 in 1948.
[2] Formerly Belgian Congo; declared independent 30 June 1960.
[3] Excluding Asiatic population, numbering 897 for both sexes.
[4] Including an estimated 219 000 persons in Northern Frontier Provinces and Rift Valley only partially covered by census, but excluding non-African armed forces and, at the time of the census, 4 137 persons in transit and 188 Polish refugees in camps.
[5] Including dependency of Rodrigues.
[6] Excluding 215 European military personnel and 56 crew members and passengers on ships in harbours.
[7] Former Spanish Protectorate.
[8] Excluding population of southern part, numbering 5 878.
[9] Former French Protectorate.
[10] Resident civilian population. Data have not been adjusted for overestimation.
[11] Moslem nationals only.
[12] Former British dependency; declared independent 1 October 1960.
[13] Believed to be underestimated by approximately 1 924 000 for both sexes.
[14] Excludes persons in institutions.

* Provisoire.
[1] Population de droit, mais non compris les personnes vivant dans des institutions ou des établissements militaires. Pour les années antérieures à 1954, non compris les territoires du Sud qui comptaient 816 993 habitants en 1948.
[2] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[3] Non compris la population d'origine asiatique, au nombre de 897 pour les deux sexes.
[4] Y compris 219 000 (estimation) habitants des Provinces de la Frontière du Nord et de la Vallée du Rift, qui n'ont été que partiellement recensés, mais non compris les militaires non africains et 4 137 personnes de passage et 188 réfugiés polonais dans des camps au moment du recensement.
[5] Y compris la possession de Rodrigues.
[6] Non compris 215 militaires européens et 56 hommes d'équipage et passagers à bord de navires dans les ports.
[7] Ancien protectorat espagnol.
[8] Non compris la population de la zone Sud (5 878).
[9] Ancien protectorat français.
[10] Population civile résidente. Chiffres non corrigés pour surestimation.
[11] Nationaux musulmans seulement.
[12] Ancienne possession britannique; proclamée indépendante le 1er octobre 1960.
[13] Chiffre considéré comme inférieur de 1 924 000 environ à la réalité pour les deux sexes.
[14] Non compris les personnes vivant dans des institutions.

[15] African population only; based on demographic sample survey.
[16] Excluding approximately 700 men in military service in East Africa and the Middle East.
[17] Created 1 July 1960 by the union of former British Somaliland with the former United Nations Trust Territory of Somaliland under Italian administration; declared independent 26 June and 1 July 1960, respectively.
[18] Excluding data for Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa (population 3 329 in 1951).
[19] Series not homogeneous in respect of definition of "urban".
[20] Including an estimate of 183 833 for persons living outside the Police Zone.
[21] Population enumerated in the Police Zone, plus an estimate for persons living outside the Zone.
[22] Formerly known as Spanish Guinea, and comprising African Provinces of Fernando Póo and Rio Muni.
[23] Excluding civil administration personnel and armed forces.
[24] *De jure* population.
[25] Data based on sample census of population which covered 1 700 000 persons representing 10 per cent of rural and nomad population and 100 per cent of that in 68 towns (urban).
[26] Population actually enumerated, excluding adjustment for underenumeration estimated at 8 per cent.
[27] Excluding non-African armed forces.
[28] Due to rounding, totals differ from those shown elsewhere.
[29] Excluding Algerian refugees temporarily in the country.

* Provisoire.
[15] Population africaine seulement; d'après une enquête démographique par sondage.
[16] Non compris quelque 700 militaires en Afrique orientale et au Moyen-Orient.
[17] Créée, le 1er juillet 1960, par la réunion de l'ancienne Somalie britannique et de l'ancien Territoire sous tutelle de la Somalie sous administration italienne qui ont été proclamés indépendants le 26 juin et le 1er juillet 1960 respectivement.
[18] Non compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.
[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[20] Y compris 183 833 (estimation) personnes vivant en dehors de la zone de police.
[21] Population dénombrée dans la zone de police, plus nombre estimatif de personnes vivant en dehors de la zone.
[22] Anciennement Guinée espagnole; provinces africaines de Fernando Póo et Rio Muni.
[23] Non compris les fonctionnaires civils et les militaires.
[24] Population de droit.
[25] D'après un recensement par sondage de la population ayant porté sur 1 700 000 personnes, soit 10 pour cent de la population rurale et de la population nomade et 100 pour cent de la population de 68 villes.
[26] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement estimé à 8 pour cent.
[27] Non compris les militaires non africains.
[28] Les chiffres ayant été arrondis, les totaux ne concordent pas avec ceux qui sont données ailleurs.
[29] Non compris les réfugiés algériens temporairement dans le pays.

* Provisional.
[18] Excluding data for Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa (population 3 329 in 1951).
[30] Including armed forces outside country but excluding enemy prisoners of war within country.
[31] Note suppressed.
[32] Excluding nomad population, numbering 12 000 in 1937 and 55 073 in 1947, and, in 1957, population of frontier districts.
[33] Excluding alien armed forces, their dependants and enemy prisoners of war in the area.
[34] Data based on pre-censal house listings.
[35] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and declared independent 5 August 1960.
[36] Indigenous population only.
[37] Excluding persons in transit and Polish refugees in camps.
[38] Resident civilian population.
[39] Excluding 298 persons temporarily absent, of which 179 males and 119 females.

* Provisoire.
[18] Non compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.
[30] Y compris les militaires hors du pays, mais non compris les prisonniers de guerre ennemis dans le pays.
[31] [Note supprimée].
[32] Non compris les nomades (12 000 en 1937 et 55 073 en 1947) et, en 1957, la population des districts frontaliers.
[33] Non compris les militaires étrangers, les personnes à leur charge et les prisonniers de guerre ennemis se trouvant sur le territoire.
[34] D'après un relevé des maisons effectué avant le recensement.
[35] Ce pays qui faisait partie de l'ancienne Afrique-Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 5 août 1960.
[36] Population indigène seulement.
[37] Non compris les personnes de passage et les réfugiés polonais vivant dans des camps.
[38] Population civile résidente.
[39] Non compris 298 personnes temporairement absentes (179 hommes et 119 femmes).

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

* Provisional.
[19] Series not homogeneous in respect of definition of "urban".
[24] *De jure* population.
[40] Prior to 1951, excluding Newfoundland, which became the tenth province on 1 April 1949.
[41] Data are results of population count in connexion with third national census of housing and dwellings.
[42] Population held to be overstated by approximately 1 000 000 for both sexes.
[43] *De jure* population but excluding diplomatic personnel stationed outside country, numbering 84 for both sexes.

* Provisoire.
[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[24] Population de droit.
[40] Pour les années antérieures à 1951, non compris Terre-Neuve qui est devenue la dixième province du Canada le 1er avril 1949.
[41] Résultats d'un comptage de la population exécuté à l'occasion du troisième recensement national de l'habitation et du logement.
[42] Chiffre considéré comme supérieur de 1 000 000 environ à la réalité pour les deux sexes.
[43] Population de droit, mais non compris le personnel diplomatique en poste hors du pays (84 pour les deux sexes).

[19] Series not homogeneous in respect of definition of "urban".
[24] De jure population.
[44] For 1926-1940, data adjusted for underenumeration at census. For 1950, population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 4.3 per cent for both sexes.
[45] Prior to 1954, excluding persons in institutions.
[46] Data include adjustment for underenumeration which is believed to be too high.
[47] Excluding data for Canal Zone.
[48] Except for total population of both sexes, excluding tribal Indian population, numbering 55 987 for both sexes.
[49] De jure population, but including armed forces stationed in the area.

[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[24] Population de droit.
[44] Pour 1926-1940, chiffres ajustés pour tenir compte du sous-dénombrement qui s'est produit lors des recensements. Pour 1950, population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 4,3 pour cent pour les deux sexes.
[45] Pour les années antérieures à 1954, non compris les personnes vivant dans des institutions.
[46] Compte tenu d'un ajustement pour sous-dénombrement considéré comme exagéré.
[47] Non compris la Zone du canal.
[48] Sauf pour le chiffre de la population totale des deux sexes, non compris les Indiens vivant en tribus (55 987 pour les deux sexes).
[49] Population de droit, mais y compris les militaires en garnison sur le territoire.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

[19] Series not homogeneous in respect of definition of "urban".
[24] *De jure* population.
[51] Population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[52] Including 8.4 per cent adjustment for underenumeration (227 866) and estimate of 87 000 for tribal Indian population.
[53] Excluding Indian jungle population, numbering 45 249 in 1950. Also excluding schedules not tabulated by sex and urban or rural, numbering 16 713 in 1940 and 31 960 in 1950.
[54] Excludes Amerindians of remote districts, numbering 9 700 for both sexes.
[55] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 2.5 per cent in 1920, 2.4 per cent in 1930, 1.4 per cent in 1940 and 5.8 per cent in 1952.
[56] Excluding population of *Deparmento* of Arica not tabulated by sex and urban or rural, numbering 15 348.

[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[24] Population de droit.
[51] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 1 pour cent pour sous-dénombrement.
[52] Compte tenu d'un ajustement de 8,4 pour cent (227 866) pour sous-dénombrement et de 87 000 (estimation) Indiens vivant en tribus.
[53] Non compris les Indiens de la jungle (45 249 en 1950) et les bulletins non classés par sexe (16 713 en 1940 et 31 960 en 1950).
[54] Non compris 9 700 Amérindiens des deux sexes habitant des régions reculées.
[55] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,5 pour cent en 1920, 2,4 pour cent en 1930, 1,4 pour cent en 1940 et 5,8 pour cent en 1952.
[56] Non compris la population du département d'Arica non classée par sexe et non répartie entre zones urbaines et zones rurales (15 348 en 1920).

* Provisional.
[19] Series not homogeneous in respect of definition of "urban".
[57] Including adjustment for underenumeration, estimated at 191 683 for both sexes.
[58] *De jure* population, but excluding Indian jungle population.
[59] Population actually enumerated, but excluding 12 881 schedules not tabulated by sex and urban or rural. Also excluding Indian jungle population, estimated at 17 000, and an adjustment of 50 067 for underenumeration.
[60] Excluding Indian jungle population, estimated at 350 000, and an adjustment of 465 144 for underenumeration in 1940.
[61] Excluding Indian and Negro population living in tribes, estimated at 11 167 in 1921 and 26 000 in 1950.
[62] Excluding Indian jungle population, numbering 103 492 in 1936, 100 600 in 1941 and 56 705 in 1950.
[63] Excluding alien armed forces, merchant seamen and foreign diplomatic personnel.
[64] Data estimated from provisional results of a demographic sample survey in 3 460 villages, and supplementary administrative reports.

* Provisoire.
[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[57] Compte tenu d'un ajustement pour sous-dénombrement estimé à 191 683 pour les deux sexes.
[58] Population de droit, mais non compris les Indiens de la jungle.
[59] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés par sexe et non répartie entre zones urbaines et zones rurales. Non compris également 17 000 (estimation) Indiens de la jungle et compte non tenu d'un ajustement pour sous-dénombrement estimé à 50 067.
[60] Non compris les Indiens de la jungle estimés à 350 000 et compte non tenu d'un ajustement de 465 144 pour sous-dénombrement en 1940.
[61] Non compris les Indiens et les Noirs vivant en tribus, estimés à 11 167 en 1921 et 26 000 en 1950.
[62] Non compris les Indiens de la jungle (103 492 en 1936, 100 600 en 1941 et 56 705 en 1950).
[63] Non compris les militaires étrangers, les marins de commerce et le personnel diplomatique étranger, mais y compris les civils étrangers.
[64] Estimation établie d'après les résultats provisoires d'une enquête démographique par sondage effectuée dans 3 460 villages, et complétée au moyen de rapports administratifs.

[65] Excluding non-resident military and shipping personnel, together numbering 36 606 in 1946.

[66] Except for total population both sexes, excluding 442 persons whose sex and residence were not specified. Because of rounding, urban population both sexes is not the sum of the parts.

[67] Population actually enumerated; total, including 0.7 per cent adjustment for underenumeration, is 8 154 580 for both sexes.

[68] Excluding armed forces and foreigners.

[69] Former British dependency; declared independent 16 August 1960. Urban population excludes inhabitants of suburbs of Nicosia, estimated at 32 877 in 1956.

[70] Including military personnel and persons on ships in port, but excluding persons in special camps.

[71] Excluding 4 940 military personnel in camps and 7 482 persons in special internment camps.

[72] Registered population only, excluding armed forces, 163 323 children under age 12, 3 835 members of police force, and 1 200 visitors and detainees.

[73] Excluding transients afloat. For 1931 and 1947, also excluding non-locally domiciled military and civilian services personnel and their dependants and, in 1947, Japanese prisoners of war, together numbering 14 735 in 1947.

[65] Non compris les militaires et agents des compagnies maritimes non résidents, soit 36 606 personnes en 1946.

[66] Sauf pour le chiffre de la population totale des deux sexes, non compris 442 personnes dont le sexe ou la résidence n'ont pas été spécifiés. Le chiffre de la population urbaine pour les deux sexes, ayant été arrondi, ne correspond pas à la somme des composants.

[67] Population effectivement dénombrée; le total, compte tenu d'un ajustement de 0,7 pour cent pour sous-dénombrement, est de 8 154 580 pour les deux sexes.

[68] Non compris les militaires et les étrangers.

[69] Ancienne possession britannique; proclamée indépendante le 16 août 1960. La population urbaine ne comprend pas les habitants de la banlieu de Nicosia, estimés à 32 877 en 1956.

[70] Y compris les militaires et les personnes à bord de navires dans le port, mais non compris les personnes se trouvant dans des camps spéciaux.

[71] Non compris 4 940 militaires se trouvant dans des camps et 7 482 personnes se trouvant dans des camps d'internement spéciaux.

[72] Population enregistrée seulement, non compris les militaires, 163 323 enfants de moins de 12 ans, 3 835 policiers et 1 200 visiteurs et détenus.

[73] Non compris les personnes de passage à bord de navires. Pour 1931 et 1947, non compris également les militaires et les fonctionnaires domiciliés en dehors du territoire, ainsi que les personnes à leur charge les accompagnant et, pour 1947, les prisonniers de guerre japonais, soit au total 14 735 en 1947.

* Provisional.
[19] Series not homogeneous in respect of definition of "urban".
[74] Pre-partition India, excluding Aden and Burma.
[75] Republic of India, but including data for Sikkim and excluding data for Kashmir-Jammu, the final status of which has not yet been determined, the Part B tribal areas of Assam where census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon which did not become part of India until 1 November 1954. *De jure* population, excluding a 1.1 per cent adjustment for net underenumeration.
[76] Note suppressed.
[77] Including estimate of 250 000 for nomad population.
[78] Including nationals abroad and an adjustment of 221 066 for underenumeration (124 632 males, 96 434 females).
[79] Prior to 1957, excluding persons in immigrant reception centres, numbering 12 723 in 1948 (also excluding persons whose residence was not specified, numbering 17 117), 84 112 in 1949, 40 365 in 1950, 26 039 in 1951, 5 984 in 1952, 5 148 in 1953, 4 342 in 1954, 3 175 in 1955, and 3 192 in 1956.
[80] Prior to 1948, data refer to Jewish population of Palestine.

* Provisoire.
[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[74] Inde avant le partage, non compris Aden et la Birmanie.
[75] République indienne, mais y compris Sikkim et non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, les zones tribales (partie B) de l'Assam où le recensement n'a pu avoir lieu, et les Etablissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954. Population de droit, compte non tenu d'un ajustement de 1,1 pour cent pour sous-dénombrement net.
[76] Note supprimée.
[77] Y compris 250 000 nomades (estimation).
[78] Y compris les ressortissants à l'étranger et compte tenu d'un ajustement de 221 066 pour sous-dénombrement (124 632 hommes et 96 434 femmes).
[79] Pour les années antérieures à 1957, non compris les personnes se trouvant dans des centres d'accueil pour émigrants, soit 12 723 en 1948 (non compris également 17 117 personnes dont la résidence n'a pas été spécifiée), 84 112 en 1949, 40 365 en 1950, 26 039 en 1951, 5 984 en 1952, 5 148 en 1953, 4 342 en 1954, 3 715 en 1955 et 3 192 en 1956.
[80] Pour les années antérieures à 1948, population juive de Palestine seulement.

[19] Series not homogeneous in respect of definition of "urban".
[24] *De jure* population.
[81] Prewar data adjusted to exclude most of the territory no longer part of Japan, i.e., Korea, Taiwan, Karafuto, Ryukyu Islands, etc. For 1945-1950, data exclude Tokara Archipelago and Amami Islands, not under the administration of Japan after 2 September 1945 but which reverted to Japan on 5 December 1951 and 25 December 1953 respectively.
[82] Including armed forces outside country, estimated at 1 200 000.
[83] Civilian population, but including a small number of military personnel living with their families. Excluding persons whose residence was not specified, numbering 353 751 for both sexes.
[84] Excluding armed forces and foreigners. Estimated total population was 72 455 000.
[85] Excluding foreigners and those Koreans, Formosans and Ryukyuans who stated that they wished to be repatriated. Estimated total population was 74 024 000.
[86] Including adjustment for underenumeration, estimated at 3 109, due to flood conditions at time of census, but not adjusted for underenumeration which cannot be distributed by area, estimated at 525 527. Population actually enumerated is 78 098 364.
[87] Excluding Allied military and civilian personnel and their dependants.
[88] Population actually enumerated, not including 0.39 per cent adjustment for underenumeration.
[89] Excluding military personnel and their dependants living on military installations, and foreigners, except registered Palestinian refugees (numbering 469 576 in June 1952) who are included.
[90] Excluding alien armed forces, civilian aliens employed by armed forces and foreign diplomatic personnel. Data for 1949 refer to population in the area south of the 38th parallel.
[91] Excluding transients and members of UK armed forces, numbering 1 442 and 66, respectively.

[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[24] Population de droit.
[81] Chiffres d'avant guerre ajustés pour éliminer la plupart des territoires ne faisant plus partie du Japon, c.à.d. la Corée, Taïwan, Karafuto, les îles Ryû-Kyû, etc. Pour 1945-1950, non compris l'archipel des Tokara et les îles Amami, enlevés à l'administration japonaise le 2 septembre 1945, et qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.
[82] Y compris les militaires à l'étranger, estimés à 1 200 000.
[83] Population civile, mais y compris quelques militaires vivant dans leurs foyers. Non compris 353 751 personnes des deux sexes dont la résidence n'a pas été spécifiée.
[84] Non compris les militaires et les étrangers. Population totale estimée à 72 455 000.
[85] Non compris les étrangers et les personnes originaires de Corée, de Formose et des Ryû-Kyû qui ont demandé leur repatriement. Population totale estimée à 74 024 000.
[86] Compte tenu d'un ajustement pour sous-dénombrement estimé à 3 109 et imputable aux inondations qui ont eu lieu à l'époque du recensement, mais compte non tenu du sous-dénombrement qui n'a pu être ventilé par région, estimé à 525 527. Population effectivement dénombrée : 78 098 364.
[87] Non compris les militaires et le personnel civil alliés, ainsi que les personnes à leur charge les accompagnant.
[88] Population effectivement dénombrée, compte non tenu d'un ajustement de 0,39 pour cent pour sous-dénombrement.
[89] Non compris les militaires et les personnes à leur charge vivant dans des établissements militaires, ainsi que les étrangers, mais y compris les réfugiés palestiniens immatriculés (469 576 en juin 1952).
[90] Non compris les militaires étrangers, les civils étrangers employés par les formes armées et le personnel diplomatique étranger. Les chiffres de 1949 se rapportent à la population du territoire situé au sud du 38ème parallèle.
[91] Non compris les personnes de passage et les militaires britanniques (1 442 et 66 respectivement).

* Provisional.

[19] Series not homogeneous in respect of definition of "urban".

[92] Data for 1921, 1931 and 1941 are included with that of India.

[93] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Gilgit, Baltistan, Junagadh, Manavadar, and the port and peninsula of Gwadar acquired from Muscat and Oman on 8 September 1958, but including an estimate of 1 759 932, of which 924 651 males and 835 281 females, for population of Frontier Regions only partially covered by census. Data exclude adjustment for underenumeration in urban areas amounting to 5 per cent or 393 166 for both sexes.

[94] Territory formerly under British mandate. For Jewish population, see Israel.

[95] Excluding Bedouin population, numbering 66 553 for both sexes.

[96] Data based on results of Philippine statistical survey of private households.

[97] Excluding Allied military and civilian personnel and their dependants; also excluding Tokara Archipelago and Amami Islands, which reverted to Japan on 5 December 1951 and 25 December 1953 respectively.

[98] Excluding transients afloat, numbering 3 466 at 1957 census, and non-locally domiciled military and civilian services personnel and their dependants, numbering 27 299 at 1957 census. For 1947, also excluding Japanese prisoners of war, numbering 7 517.

[99] Data estimated from results of a demographic and economic sample survey covering 2 241 villages and 64 large municipalities. Total is subject to error of ± 1.58 per cent.

* Provisoire.

[19] Série non homogène pour ce qui est de la définition du terme "urbain".

[92] Les données pour 1921, 1931 et 1941 sont comprises dans celles de l'Inde.

[93] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le Gilgit, le Baltistan, le Junagadh, le Manavadar, ainsi que le port et la péninsule de Gwadar cédés par Mascate et Oman le 8 septembre 1958, mais compte tenu d'une estimation de 1 759 932 (dont 924 651 hommes et 835 281 femmes) pour la population des régions frontalières partiellement recensé. Compte non tenu d'un ajustement pour sous-dénombrement dans les régions urbaines (5 pour cent ou 393 166 pour les deux sexes).

[94] Ancien mandat britannique. Pour la population juive, voir Israël.

[95] Non compris 66 553 Bédouins des deux sexes.

[96] D'après les résultats de l'enquête statistique des Philippines sur le ménages privés.

[97] Non compris les militaires et les fonctionnaires civils alliés, ainsi que les personnes à leur charge les accompagnant; non compris également l'archipel des Tokara et les îles Amami qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.

[98] Non compris les personnes de passage à bord de navires (3 466 au recensement de 1957), ni les militaires et fonctionnaires civils domiciliés hors du territoire et les personnes à leur charge les accompagnant (27 299 au recensement de 1957). Pour 1947, non compris également 7 517 prisonniers de guerre japonais.

[99] D'après les résultats d'une enquête démographique et économique par sondage, qui a porté sur 2 241 villages et 64 grandes municipalités. Le total comporte une marge d'erreur de ± 1,58 pour cent.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

[19] Series not homogeneous in respect of definition of "urban".
[105] Excluding Faeroe Islands and Greenland. Beginning 1935, *de jure* population.
[106] For 1944, 1945, 1948 and 1949, Finnish nationals in Finland only; beginning 1951, including Finnish nationals temporarily outside country.
[107] Data based on tax lists (yearly fiscal registration).
[108] Including small areas ceded to USSR 1944-1947. Finnish nationals in Finland, including merchant seamen at sea.
[109] Except for 1946, *de jure* population. Prior to 1954, excluding communes of Tende and Brigue ceded by Italy in 1947, with population numbering 2 848 at 1954 census.
[110] Excluding an estimated 663 000 enemy prisoners of war.
[111] Excludes population of city of Bastia, estimated at 40 000, and 38 000 persons not in their place of legal residence at time of census; also excludes members of the career military service and occupation personnel and their families in Germany and Austria, estimated at 187 000.
[112] Territory of 1937. *De jure* population.
[113] Data for Saar refer to 1927.
[114] Data for Saar refer to 1935.

[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[105] Non compris les îles Féroé et le Groenland. Pour les années antérieures à 1935, population de droit.
[106] Pour 1944, 1945, 1948 et 1949, nationaux finlandais en Finlande seulement; à partir de 1951, y compris les nationaux finlandais temporairement hors du pays.
[107] D'après les rôles du fisc (registres annuels).
[108] Y compris diverses zones peu étendues cédées à l'URSS en 1944-1947. Nationaux finlandais en Finlande, y compris les marins de commerce en mer.
[109] Sauf pour 1946, population de droit. Pour les années antérieures à 1954, non compris les communes de Tende et de Brigue cédées par l'Italie en 1947 (2 848 habitants au recensement de 1954).
[110] Y compris 663 000 (estimation) prisonniers de guerre ennemis.
[111] Non compris la population de la ville de Bastia estimée à 40 000, et 38 000 personnes qui ne se trouvaient pas à leur domicile légal au moment du recensement; non compris également les militaires de carrière et le personnel d'occupation en Allemagne et en Autriche ainsi que les membres de leur famille les accompagnant, estimés à 187 000.
[112] Territoire de 1937. Population de droit.
[113] Les données pour la Sarre se rapportent à 1927.
[114] Les données pour la Sarre se rapportent à 1935.

* Provisional.
[19] Series not homogeneous in respect of definition of "urban".
[24] De jure population.
[124] Excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with population estimated at 54 876 in 1956.
[125] Excluding full-blooded aborigines, numbering 46 638 in 1947 and 39 319 in 1954, and migratory population.
[126] Prior to 1951, excluding migratory population. Beginning 1945, excluding armed forces outside country, numbering 45 381 in 1945, 1 894 in 1951 and 2 162 in 1956, members of the US armed forces and enemy prisoners of war, numbering 250 and 803, respectively, in 1945.
[127] Maori population, almost wholly rural prior to 1926, excluded from urban population.

* Provisoire.
[19] Série non homogène pour ce qui est de la définition du terme "urbain".
[24] Population de droit.
[124] Non compris Koper et Buje, c.à.d. la partie de l'ancien Territoire libre de Trieste rattachée à la Yougoslavie en octobre 1954 et dont la population était estimée à 54 876 en 1956.
[125] Non compris les aborigènes de race pure (46 638 en 1947 et 39 319 en 1954) et les migrants.
[126] Pour les années antérieures à 1951, non compris les migrants. A partir de 1945, non compris les militaires à l'étranger (45 381 en 1945, 1 894 en 1951 et 2 162 en 1956), les militaires américains et les prisonniers de guerre ennemis se trouvant sur le territoire, soit 250 et 803 respectivement en 1945.
[127] La population maori, presque entièrement rurale avant 1926, n'a pas été comprise dans la population urbaine.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

[128] Territory of 1923-1938.

[129] Data include an estimate for the western province of the Byelorussian SSR and of the Ukrainian SSR, the Estonian SSR, the Latvian SSR, the Lithuanian SSR, and the Moldavian SSR.

[130] Data include an estimate for the western province.

[128] Territoire de 1923-1938.

[129] Les données comprennent une estimation pour les provinces occidentales de la RRS de Biélorussie et de la RSS d'Ukraine, pour la RSS d'Estonie, la RSS de Lettonie, la RSS de Lituanie et la RSS de Moldavie.

[130] Les données comprennent une estimation pour la province occidentale.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

Definitions of "urban"

AFRICA

Algeria: Forty-six important communes having local self-government.

Kenya: Gazetted (declared) townships (towns)

Mauritius: Localities with legally defined limits, administered by a locally nominated body or a municipal corporation.

Morocco: 1960, no definition available.
Northern Zone. Localities constituted as municipalities.

Southern Zone. Localities constituted as municipalities and other agglomerations of 2 000 or more inhabitants.

Nigeria: The 40 largest towns.

Reunion: Administrative centres of communes, having 2 000 or more inhabitants.

Rhodesia and Nyasaland, Federation of:
Northern Rhodesia. The nine main European towns, neighboring mines, locations and compounds.

Seychelles: Port Victoria, the capital.

Somalia: No definition available.

South West Africa: Localities (towns, villages and townships). For 1946, those having some form of urban local government. For 1951, those large enough to be treated as separate units, whether having local government or not.

Spanish Equatorial Region: Towns of Santa Isabel and San Carlos.

Sudan: Sixty-eight towns.

Swaziland: Localities proclaimed as urban.

Tanganyika: Gazetted (declared) townships (towns).

Tunisia: Localities of 1 000 or more inhabitants, having local self-government.

Union of South Africa: Cities, towns and villages having some form of local urban government and those which, though having no local form of government, are considered sufficiently urban in character.

U.A.R.:
Egypt. Governorates and chief towns of provinces and districts.

Upper Volta: Six urban communes and eight localities which can be considered as urban.

Zanzibar and Pemba: Localities declared townships under the Towns Decree, i.e., town of Zanzibar and three townships of Wete, Chake and Mkoani.

NORTH AMERICA

Bermuda: Hamilton City and St. George Town.

British Honduras: Legally established towns.

Canada: For 1921-1941, all incorporated cities, towns and villages. Beginning 1951, all cities, towns and villages of 1 000 or more inhabitants, whether incorporated or not, all parts of census metropolitan areas and other major urban areas.

Newfoundland. All cities, towns and villages of 1 000 or more inhabitants, whether incorporated or not, all parts of census metropolitan areas and other major urban areas.

Costa Rica: For 1927, capitals of provinces. For 1950, administrative centres of cantons.

Cuba: For 1931 and 1943, localities with named streets. For 1953, localities of 150 or more inhabitants, and having urban characteristics such as electricity, and legal and medical services.

Dominican Republic: Administrative centres of *municipios* and municipal districts, some of which include suburban zones of a rural character.

Définitions du terme "urbain"

AFRIQUE

Algérie: Quarante-six communes importantes et s'administrant elles-mêmes.

Kenya: Villes ou municipalités reconnues.

Ile Maurice: Localitiés ayant des limites légalement défines, administrées par une organisme élu localement ou par un conseil municipal.

Maroc: Aucune définition n'a été donnée pour 1960.
Zone du Nord. Localités érigées en municipalités.

Zone du Sud. Localités érigées en municipalités et autres agglomérations de 2 000 habitants au moins.

Nigéria: Les 40 villes principales.

Réunion: Chefs-lieux des communes ayant 2 000 habitants au moins.

Rhodésie et Nyassaland, Fédération de:
Rhodésie du Nord. Les 9 villes européennes principales, y compris les mines, réserves et *compounds* avoisinants.

Iles Seychelles: La capitale (Port Victoria).

Somalie: Aucune définition n'a été donnée.

Sud-Ouest africain: Localités (villes, villages et communes). Pour 1946, celles qui sont dotées d'une forme quelconque d'administration locale urbaine; pour 1951, celles qui sont d'une importance suffisante pour être considérées comme des unités distinctes, qu'elles aient ou non une administration locale.

Région équatoriale espagnole: Villes de Santa Isabel et San Carlos.

Soudan: Soixante-huit villes.

Swaziland: Localités déclarées urbaines.

Tanganyika: Communes (villes) reconnues (declarées).

Tunisie: Localités de 1 000 habitants au moins et s'administrant elles-memes.

Union sud-africaine: Villes et villages dotés d'une forme quelconque d'administration urbaine locale ou à défaut ayant un caractère suffisamment urbain pour être considérés comme tels.

R.A.U.:
Egypte. Gouvernorats et chefs-lieux de provinces et de districts.

Haute-Volta: Six communes urbaines et 8 localités pouvant être considérées comme urbaines.

Zanzibar et Pemba: Localités érigées en communes en vertu *Towns Decree*, c.à.d. la ville de Zanzibar et les trois communes de Wete, Chake et Mkoani.

AMERIQUE DU NORD

Iles Bermudes: Hamilton City et St. George Town.

Honduras britannique: Villes reconnues.

Canada: Pour 1921-1941, villes et villages érigés en municipalités. A partir de 1951, villes et villages de 1 000 habitants au moins, érigés ou non en municipalités, plus toutes les parties des zones comptant comme métropolitaines aux fins du recensement et les autres zones urbaines principales.

Terre-Neuve. Villes et villages de 1 000 habitants au moins, érigés ou non en municipalités, plus toutes les parties des zones comptant comme métropolitaines aux fins du recensement et les autres zones urbaines principales.

Costa Rica: Pour 1927, les chefs-lieux de provinces; pour 1950, les chefs-lieux de cantons.

Cuba: Pour 1931 et 1943, les localités dont les rues portent des noms. Pour 1953, les localités de 150 habitants au moins ayant des caractéristiques urbaines comme l'électricité, des services juridiques et médicaux.

République Dominicaine: Chefs-lieux de *municipios* et de districts municipaux, comprenant dans certains cas des zones suburbaines de caractère rural.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

Definitions of "urban" (continued)

NORTH AMERICA (continued)

El Salvador: Administrative centres of departments, districts and *municipios*.

Guadeloupe and dep.: Communes having 2 000 or more inhabitants in the administrative centre.

Guatemala: For 1921 and 1940, administrative centres of *municipios*. For 1950, localities of more than 2 000 inhabitants, and localities of 1 500-2 000 inhabitants if running water is supplied to houses.

Haiti: Administrative centres of communes.

Honduras: Administrative centres of districts and *municipios*.

Martinique: For 1921-1936, administrative centres of communes. For 1954, communes having 2 000 or more inhabitants in the administrative centre.

Mexico: Localities of more than 2 500 inhabitants.

Netherlands Antilles:
Curaçao. Willemstad, the capital.

Nicaragua: Administrative centres of *municipios*.

Panama: Localities of 1 500 or more inhabitants and having essentially urban characteristics.

Puerto Rico: Cities, towns and villages of 2 500 or more inhabitants.

United States: For 1920-1940, incorporated places of 2 500 or more inhabitants, and certain additional unincorporated but thickly settled areas that were designated as urban for purposes of the census. For 1950, incorporated and unincorporated places of 2 500 or more inhabitants, including the urbanized zones around cities of 50 000 or more.

Virgin Islands [UK]: Towns of 5 000 or more inhabitants.

Virgin Islands [US]: Localities of 2 500 or more inhabitants.

West Indies:
Antigua. City of St. John's.

Barbados. Bridgetown and St. Michael Parish.

Dominica. Towns of 1 000 or more inhabitants.

Grenada. Towns of 1 000 or more inhabitants.

Jamaica. Towns of 5 000 or more inhabitants.

Montserrat: Towns of 5 000 or more inhabitants.

St. Kitts-Nevis and Anguilla. Basseterre town.

St. Lucia. Towns of 1 000 or more inhabitants.

St. Vincent. Towns of 1 000 or more inhabitants.

Trinidad and Tobago. Port-of-Spain, Arima borough and San Fernando town.

Turks and Caicos Islands: Towns of 5 000 or more inhabitants.

SOUTH AMERICA

Argentina: Cities, towns and villages of 2 000 or more inhabitants.

Bolivia: Administrative centres of departments, provinces and cantons.

Brazil: Urban and suburban zones of administrative centres of municipalities and *distritos*.

British Guiana: Georgetown and environs, and New Amsterdam.

Chile: For 1920 and 1930, cities and towns of 1 000 or more inhabitants. For 1940, localities of 1 000 or more inhabitants and administrative centres of communes regardless of size. For 1952, localities of demographic and administrative importance, generally capitals of communes, having definite urban characteristics contributed by certain public and municipal services.

Définitions du terme "urbain" (suite)

AMERIQUE DU NORD (suite)

Salvador: Chefs-lieux de départmentes de districts, et de *municipios*.

Guadeloupe et dép.: Communes ayant 2 000 habitants au moins au chef-lieu.

Guatemala: Pour 1921 et 1940, chefs-lieux de *municipios*. Pour 1950, localités de 2 000 habitants au moins et localités de 1 500 à 2 000 habitants avec eau courante dans les maisons.

Haïti: Chefs-lieux de communes.

Honduras: Chefs-lieux de districts et de *municipios*.

Martinique: 1921-1936, chefs-lieux de communes. Pour 1954, communes ayant 2 000 habitants au moins au chef-lieu.

Mexique: Agglomérations de plus de 2 500 habitants.

Antilles néerlandaises:
Curaçao. La capitale (Willemstad).

Nicaragua: Chefs-lieux de *municipios*.

Panama: Agglomérations de 1 500 habitants au moins ayant des caractéristiques essentiellement urbaines.

Porto-Rico: Villes et villages de 2 500 habitants au moins.

Etats-Unis: 1920-1940, localités de 2 500 habitants au moins érigées en municipalités plus certaines zones non érigées en municipalités mais à forte densité de population qui ont été classées comme urbaines aux fins du recensement. Pour 1950, localités érigées ou non en municipalités de 2 500 habitants au moins, y compris les zones urbaines entourant les *cities* de 50 000 habitants au moins.

Iles Vierges [R-U]: Villes de 5 000 habitants au moins.

Iles Vierges [E-U]: Localités de 2 500 habitants au moins.

Indes occidentales:
Antigua. St-John's.

Barbade. Bridgetown et paroisse de St-Michel.

Dominique. Villes de 1 000 habitants au moins.

Grenade. Villes de 1 000 habitants au moins.

Jamaïque. Villes de 5 000 habitants au moins.

Montserrat: Villes de 5 000 habitants au moins.

Saint-Christophe-Nevis et Anguilla. Ville de Basseterre.

Sainte-Lucie. Villes de 1 000 habitants au moins.

Saint-Vincent. Villes de 1 000 habitants au moins.

Trinité et Tobago. Port-of-Spain, *borough* d'Arima et San Fernando.

Iles Turques et Caïques: Villes de 5 000 habitants au moins.

AMERIQUE DU SUD

Argentine: Villes et villages de 2 000 habitants au moins.

Bolivie: Chefs-lieux de départements, de provinces et de cantons.

Brésil: Zones urbaines et suburbaines des chefs-lieux de municipalités et de *distritos*.

Guyane britannique: Georgetown et sa banlieue, ainsi que New Amsterdam.

Chili: Pour 1920 et 1930, villes de 1 000 habitants au moins. Pour 1940, localités de 1 000 habitants au moins et chefs-lieux de communes, quelle qu'en soit la dimension. Pour 1952, localités d'importance démographique et administrative, généralement chefs-lieux de communes, ayant des caractéristiques urbaines bien définies constituées par certains services publics et municipaux.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

Definitions of "urban" (continued)

SOUTH AMERICA (continued)

Colombia: Administrative centres of districts and *municipios*, having 1 500 or more inhabitants.

Ecuador: Capitals of provinces and cantons.

Paraguay: Cities, towns and administrative centres of departments and districts.

Peru: Capitals of departments, provinces and districts and other localities of which the number of inhabitants exceeds the average for the capitals, provided such centres do not have typically rural characteristics.

Surinam: Paramaribo town.

Venezuela: Localities of 1 000 or more inhabitants.

ASIA

Bahrain: For 1941 and 1950, towns of Manama, Muharraq, Hedd and Awali. For 1959, towns of Manama, Muharraq, Hedd and Rifaa.

Burma: Localities (municipalities and towns) of 5 000 or more inhabitants and having definite urban characteristics. A few localities of less than 5 000 inhabitants but having urban characteristics are included, while a few of more than 5 000 but having rural characteristics are excluded.

Cambodia: Towns.

Ceylon: Municipalities, urban-council areas and local-board areas.

China (mainland): Cities including suburbs, and towns.

China (Taiwan): Cities and towns.

Cyprus: Administrative centres (capitals) of districts.

Federation of Malaya: Towns and villages of 1 000 or more inhabitants.

Hong Kong: Island of Hong Kong and Kowloon Peninsula.

India: Localities (municipalities and towns) of 5 000 or more inhabitants and having definite urban characteristics. A few localities of less than 5 000 inhabitants but having urban characteristics are included while a few of more than 5 000 but having rural characteristics are excluded.

Iran: Cities, towns and villages of 5 000 or more inhabitants and the administrative centres of districts irrespective of number of inhabitants.

Israel: Prior to 1957, towns, settlements which are adjacent to towns and of which most of the inhabitants are engaged in non-agricultural occupations, work camps and urban villages. For 1957 and 1958, all settlements of more than 5 000 inhabitants, of whom less than 50 per cent earn their living from agriculture, or those of 2 000-5 000 inhabitants, of whom less than one-third earn their living from agriculture.

Japan: "Urban counties" or "municipalities" (*shi*, and *ku* of Tokyo-to) usually having 30 000 or more inhabitants and which may include some rural area as well as urban cluster.

Jordan: Towns.

Korea, Republic of: For 1949, incorporated cities of 40 000 or more inhabitants. For 1955 and 1958, Seoul city, urban counties *(shi)* and towns *(eup)*.

Maldive Islands: Male, the capital (city proper).

Nepal: Cities of 5 000 inhabitants or more.

North Borneo: Towns and villages having urban characteristics.

Pakistan: Localities of 5 000 or more inhabitants and all municipalities.

Palestine: Towns.

Définitions du terme "urbain" (suite)

AMERIQUE DU SUD (suite)

Colombie: Chefs-lieux de districts et de *municipios* ayant 1 500 habitants au moins.

Equateur: Chefs-lieux de provinces et de cantons.

Paraguay: Villes et chefs-lieux de départements et de districts.

Pérou: Chefs-lieux de départements, de provinces et de districts et autres localités dont le nombre d'habitants dépasse celui de la population moyenne des chefs-lieux et n'ayant pas de caractéristiques typiquement rurales.

Surinam: Ville de Paramaribo.

Venezuela: Agglomérations de 1 000 habitants au moins.

ASIE

Bahreïn: Pour 1941 et 1950, villes de Manama, Muharraq, Hedd et Awali. Pour 1959, villes de Manama, Muharraq, Hedd et Rifaa.

Birmanie: Agglomérations (municipalités et villes) de 5 000 habitants au moins ayant des caractéristiques urbaines bien définies. Y compris quelques agglomérations de moins de 5 000 habitants mais possédant des caractéristiques urbaines et non compris quelques agglomérations de plus de 5 000 habitants mais ayant des caractéristiques rurales.

Cambodge: Villes.

Ceylan: Municipalités et zones administrées par un conseil urbain ou un conseil local.

Chine (continentale): Villes avec leurs banlieues.

Chine (Taïwan): Villes.

Chypre: Chefs-lieux de districts.

Fédération de Malaisie: Villes et villages de 1 000 habitants au moins.

Hong Kong: Ile de Hong Kong et péninsule de Kowloon.

Inde: Agglomérations (municipalités et villes) de 5 000 habitants au moins ayant des caractéristiques urbaines bien définies. Y compris quelques agglomérations de moins de 5 000 habitants mais ayant des caractéristiques urbaines, et non compris quelques agglomérations de plus de 5 000 habitants mais ayant des caractéristiques rurales.

Iran: Villes et villages de 5 000 habitants au moins et chefs-lieux de districts, quel que soit le nombre des habitants.

Israël: Avant 1957, les villes, les colonies adjacentes dont la plupart des habitants ont une occupation non agricole, les camps de travail et cités. Pour 1957 et 1958, toutes les colonies de 5 000 habitants au moins, dont moins de 50 pour 100 des habitants vivent de l'agriculture, ou colonies de 2 000 à 5 000 habitants dont moins du tiers vivent de l'agriculture.

Japon: Circonscriptions urbaines ou municipalités (*shi* et *ku* de Tokyo-to) ayant ordinairement 30 000 habitants au moins et pouvant inclure quelques zones rurales aussi bien qu'une agglomération urbaine.

Jordanie: Villes.

Corée (République de): Pour 1949, villes de 40 000 habitants au moins. Pour 1955 et 1958, ville de Séoul, circonscriptions urbaines *(shi)* et villes *(eup)*.

Iles Maldives: La capitale (Male), ville proprement dite.

Népal: Villes de 5 000 habitants au moins.

Bornéo du Nord: Villes et villages ayant des caractéristiques urbaines.

Pakistan: Agglomérations de 5 000 habitants au moins et toutes les municipalités.

Palestine: Villes.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

Definitions of "urban" (continued)

ASIA (continued)

Philippines: Chartered cities and administrative centres of municipalities.

Ryukyu Islands: "Urban counties" or "municipalities" *(shi)* usually having 30 000 or more inhabitants and which may include some rural area as well as urban cluster.

Sarawak: The three main towns, Kuching, Sibu and Miri.

Sikkim: Gangtok, town, the capital.

Singapore: City of Singapore.

Thailand: For 1947, definition unknown, but total urban differs from total in localities of 100 000 or more inhabitants by 2 670 persons. For 1956, municipalities with 2 000 or more households. For 1960, municipalities.

Turkey: Chief cities and towns; these are localities with a municipal organization, i.e., administrative centres of provinces and districts regardless of size, and other agglomerations of 5 000 or more inhabitants.

EUROPE

Albania: Towns, and other industrial centres with more than 400 inhabitants.

Austria: Communes of 5 000 or more inhabitants.

Belgium: Communes of 5 000 or more inhabitants.

Bulgaria: Towns, i.e., localities legally established as urban.

Channel Islands:
Guernsey and dep. Civil Parish of St. Peter Port.

Jersey. Civil Parish of St. Helier.

Czechoslovakia: Communes of 2 000 or more inhabitants.

Denmark: For 1921, 1925 and 1935, towns with urban status. For 1930, 1940-1955, urban agglomerations of 250 or more inhabitants.

Finland: Localities legally established as towns or market towns *(kaupungit, kauppalat).*

France: Communes having 2 000 or more inhabitants in the administrative centre.

Germany: Communes having 2 000 or more inhabitants.
Eastern Germany. Communes of 2 000 or more inhabitants.

Federal Republic of Germany. Communes of 2 000 or more inhabitants.

Greece: For 1921, communes of 2 000 or more inhabitants in the largest centre of population. For 1928-1951, all communes of Greater Athens and those having 10 000 or more inhabitants in the largest centre of population.

Hungary: Budapest (capital city) and towns, area of which has been adjusted according to the territorial administrative status of 1 January 1957.

Iceland: Agglomerations of 300 or more inhabitants.

Ireland: Towns of 1 500 or more inhabitants.

Isle of Man: Four town districts.

Italy: Communes with less than 50 per cent of the economically active population engaged in agriculture.

Luxembourg: Communes having 2 000 or more inhabitants in the administrative centre.

Malta and Gozo: Built-up areas where streets are continuously fronted by buildings.

Monaco: City of Monaco.

Netherlands: Municipalities of 20 000 or more inhabitants.

Définitions du terme "urbain" (suite)

ASIE (suite)

Philippines: Villes dotées d'un statut municipal et chefs-lieux de municipalités.

Iles Ryû-kyû: Circonscriptions urbaines ou municipalités *(shi)* comptant pour la plupart 30 000 habitants au moins et pouvant inclure quelques zones rurales aussi bien qu'une agglomération urbaine.

Sarawak: Les trois villes principales, Kuching, Sibu et Miri.

Sikkim: La capitale (Gangtok).

Singapour: Ville de Singapour.

Thaïlande: Pour 1947, définition inconnue, mais il existe un écart de 2 670 entre le chiffre de la population urbaine totale et celui du total des villes de 100 000 habitants au moins. Pour 1956, municipalités de 2 000 ménages au moins. Pour 1960, municipalités.

Turquie: Villes principales, c.à.d. agglomérations possédant une organisation municipale (chefs-lieux de provinces et de districts, quelle que soit leur importance, et autres agglomérations de 5 000 habitants au moins).

EUROPE

Albanie: Villes et centres industriels de 400 habitants au moins.

Autriche: Communes de 5 000 habitants au moins.

Belgique: Communes de 5 000 habitants au moins.

Bulgarie: Villes considérées légalement comme urbaines.

Iles Anglo-Normandes:
Guernesey et dép. Paroisse civile de St Pierre.

Jersey. Paroisse civile de St Helier.

Tchécoslovaquie: Communes de 2 000 habitants au moins.

Danemark: Pour 1921, 1925 et 1935, villes ayant un statut urbain. Pour 1930, 1940-1955, agglomérations urbaines de 250 habitants au moins.

Finlande: Localités ayant reçu le statut de villes ou de bourgs *(kaupungit et kauppalat).*

France: Communes ayant 2 000 habitants au moins au chef-lieu.

Allemagne: Communes de 2 000 habitants au moins.
Allemagne orientale. Communes de 2 000 habitants au moins.

République fédérale d'Allemagne. Communes de 2 000 habitants au moins.

Grèce: Pour 1921, communes ayant 2 000 habitants au moins au chef-lieu. 1928-1951, toutes les communes du "Grand-Athènes" et celles qui ont 10 000 habitants au moins au chef-lieu.

Hongrie: 1920-1957, la capitale (Budapest) et les autres villes, dont les limites ont été remaniées conformément à la situation au 1er janvier 1957.

Islande: Agglomérations de 300 habitants au moins.

Irlande: Villes de 1 500 habitants au moins.

Ile de Man: Les quatre chefs-lieux de district.

Italie: Communes dont moins de 50 pour 100 de la population active est occupée dans l'agriculture.

Luxembourg: Communes ayant 2 000 habitants au moins au chef-lieu.

Malte et Gozo: Zones urbaines où les rues sont entièrement bordées d'immeubles.

Monaco: Ville de Monaco.

Pays-Bas: Agglomérations de 20 000 habitants au moins.

9. Urban and total population by sex (continued) — Population urbaine et population totale selon le sexe (suite)

Definitions of "urban" (continued)

EUROPE (continued)

Norway: For 1920, cities and towns with urban status. For 1930-1950, incorporated towns.

Poland: Towns, i.e., localities having an urban administrative organization with a mayor or president.

Portugal: Localities of 2 000 or more inhabitants.

Romania: Cities and towns established by law.

Spain: *Municipios* of 10 000 or more inhabitants.

Sweden: For 1920-1935 and 1950, cities *(städer)*, i.e., localities with urban status. For 1940-1945, cities, boroughs (market towns) and urban districts.

Switzerland: Communes of 10 000 or more inhabitants.

United Kingdom:

England and Wales. Cities, municipal boroughs and urban districts classified as such for local government purposes.

Northern Ireland. Cities, municipal boroughs and urban districts.

Scotland. Cities and all burghs, towns and villages of 1 000 or more inhabitants.

Yugoslavia: Administrative units governed by a City People's Committee.

OCEANIA

Australia: Capital cities of states and territories, other cities which are separately incorporated and other agglomerations within boundaries determined for census purposes and classified as urban.

Fiji Islands: Suva City, towns and townships.

New Zealand: For 1921-1954, localities defined as cities and boroughs regardless of size. For 1951-1959, localities defined as central cities, adjacent boroughs and the urbanized parts of contiguous counties, according to revision of boundaries made in 1951.

Western Samoa: Apia Urban Area.

UNION OF SOVIET SOCIALIST REPUBLICS

USSR: Cities, towns and urban-type localities.

Byelorussian SSR: Cities, towns and urban-type localities.

Ukrainian SSR: Cities, towns and urban-type localities.

Définitions du terme "urbain" (suite)

EUROPE (suite)

Norvège: Pour 1920, villes ayant un statut urbain. 1930-1950, localités érigées en municipalités.

Pologne: Villes c.à.d. localités ayant une organisation administrative urbaine avec un maire ou un président.

Portugal: Agglomérations de 2 000 habitants au moins.

Roumanie: Villes reconnues.

Espagne: *Municipios* de 10 000 habitants au moins.

Suède: 1920-1935 et 1950, villes *(städer)*, c'est-à-dire agglomérations ayant un statut urbaine. 1940-1945, villes, bourgs, *(köpingar)* et districts urbains.

Suisse: Communes de 10 000 habitants au moins.

Royaume-Uni:

Angleterre et Galles. Villes, municipalités et districts urbains définis comme tels à des fins administratives.

Irlande du Nord. Villes, municipalités et districts urbains.

Ecosse. Villes, municipalités, villes et villages de 1 000 habitants au moins.

Yougoslavie: Unités administratives administrées par un comité municipal du peuple.

OCEANIE

Australie: Capitales des Etats et des territoires, autres villes érigées en municipalités distinctes et autres agglomérations délimitées en vue du recensement et classées comme urbaines.

Iles Fidji: Ville de Suva, villes et municipalités.

Nouvelle-Zélande: 1921-1954, villes et municipalités, quelle qu'en soit l'importance. 1951-1959, agglomérations définies comme "noyaux urbains", municipalités limitrophes et parties urbanisées des comtés voisins, conformément à la revision des limites administratives faite en 1951.

Samoa occidentale: Zone urbaine d'Apia.

UNION DES REPUBLIQUES SOCIALISTES SOVIETIQUES

URSS: Municipalités, villes et localités de type urbain.

RSS de Biélorussie: Municipalités, villes et localités de type urbain.

RSS d'Ukraine: Municipalités, villes et localités de type urbain.

10. Single and married population 15 years of age and over by age and sex — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe : 1920–1960

[(E) indicates an estimate of population, otherwise data refer to censuses. Percentages are the single or married population per 100 total population of corresponding age group. For definitions and discussion, see page 34. — (E) indique qu'il s'agit d'une estimation, sinon les chiffres proviennent de données de recensement. Les pourcentages indiquent la proportion en pourcentage des personnes célibataires ou mariées par rapport à l'effectif total du groupe d'âge correspondant. Voir page 84.]

[1] Age classification based on year of birth rather than on completed years of age.
[2] For 1948, excluding personnel in military establishments. For 1954, *de jure* population actually enumerated, but excluding persons in institutions (42 917), personnel in military establishments (53 374), merchant seamen (872), armed forces and diplomatic personnel stationed outside country and some of the Moslem workers in France.
[3] White population only.
[4] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.
[5] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[6] Married population excludes persons separated from spouse.
[7] For 20 years and over.
[8] For 20-24 years.
[9] Formerly Belgian Congo; declared independent 30 June 1960.
[10] Data for population 35-44 years of age are included with age-group 25-34 years.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[2] Pour 1948, non compris les militaires dans les établissements militaires. Pour 1954, population de droit effectivement dénombrée mais non compris les personnes vivant dans des institutions (42 917), les militaires dans les établissements militaires (53 374), les marins de commerce (872), les militaires et le personnel diplomatique en poste à l'étranger et certains travailleurs musulmans en France.
[3] Population blanche seulement.
[4] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[5] Ce territoire qui faisait partie de l'ancienne Afrique Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 à la date ci-après : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.
[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[7] 20 ans et plus.
[8] 20-24 ans.
[9] Anciennement Congo belge, proclamé indépendant le 30 juin 1960.
[10] Les données du groupe 35-44 ans sont comprises dans la colonne 25-34 ans.

[5] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.

[7] For 20 years and over.

[8] For 20-24 years.

[11] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August.

[12] For 15-19 years.

[13] Data for population 20-59 years of age shown in columns for 25-34 years.

[14] For 60 years and over.

[15] For under 20 years.

[16] For 20-29 years.

[17] For 30-39 years.

[18] For 40 years and over.

[19] Excluding armed forces, 2 504 persons in transit and 188 Polish refugees in camps.

[20] Excluding alien armed forces stationed in the area.

[21] Reason for discrepancy between figures shown here and corresponding figures in Table 5 not ascertained.

[22] Including 6 861 polygamous males, shown by age below:

	15-24	25-34	35-44	45+
2 wives	57	770	1 445	4 293
3 wives	3	13	49	216
4 wives	1	2	1	11

[23] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.

[24] Including data for dependency of Rodrigues only. For 1952, excluding 215 European military personnel and 56 crew members and passengers on ships in harbor.

[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.

[5] Ce territoire qui faisait partie de l'ancienne Afrique Equatoriale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 à la date ci-après : République centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.

[7] 20 ans et plus.

[8] 20-24 ans.

[11] Ce territoire qui faisait partie de l'ancienne Afrique Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 à la date ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août.

[12] 15-19 ans.

[13] Les données du groupe 20-59 ans sont présentées dans la colonne 25-34 ans.

[14] 60 ans et plus.

[15] Moins de 20 ans.

[16] 20-29 ans.

[17] 30-39 ans.

[18] 40 ans et plus.

[19] Non compris les militaires, 2 504 personnes de passage et 188 réfugiés polonais vivant dans des camps.

[20] Non compris les militaires étrangers en garnison sur le territoire.

[21] On ne sait pas pourquoi ces chiffres s'écartent des chiffres correspondants du tableau 5.

[22] Y compris 6 861 polygames se répartissant comme suit :

	15-24	25-34	35-44	45+
2 femmes	57	770	1 445	4 293
3 femmes	3	13	49	216
4 femmes	1	2	1	11

[23] Anciennement République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.

[24] Données pour la dépendance de Rodrigues seulement. Pour 1952, non compris 215 militaires européens et 56 membres d'équipage et passagers à bord de bateaux dans le port.

[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[See note at head of table. — Voir note au début du tableau.]

[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[26] Former French Protectorate.
[27] Moroccan nationals only.
[28] For 15-29 years.
[29] For 40-49 years.
[30] For 50 years and over.
[31] Married population excludes persons consensually married, included with single population.
[32] Married population excludes 1 020 males and 1 010 females legally separated from spouse.
[33] Including Asiatic and Coloured populations numbering 5 127 (2 754 males, 2 373 females) and 8 079 (4 117 males, 3 962 females) respectively.
[34] Single population includes divorced persons.
[35] Single population includes 20 divorced persons of unknown age and sex.
[36] For 16 years and over.
[37] For 16-29 years.

[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[26] Ancien protectorat français.
[27] Nationaux marocains seulement.
[28] 15-29 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[32] La population mariée ne comprend pas 1 020 hommes et 1 010 femmes légalement séparés de leur conjoint.
[33] Y compris 5 127 personnes d'origine asiatique (2 754 du sexe masculin et 2 373 du sexe féminin) et 8 079 personnes de couleur (métis) (4 117 du sexe masculin et 3 962 du sexe féminin).
[34] La population célibataire comprend un nombre inconnu de divorcés.
[35] La population célibataire comprend 20 divorcés d'âge et de sexe inconnus.
[36] 16 ans et plus.
[37] 16-29 ans.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[6] Married population excludes persons separated from spouse.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[31] Married population excludes persons consensually married, included with single population.
[38] Created 1 July 1960 by the union of former British Somaliland with the former United Nations Trust Territory of Somaliland under Italian administration, which were declared independent 26 June and 1 July 1960, respectively.
[39] Data are for former Italian Somaliland only.
[40] Including data for Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa (population 3 329 in 1951). Excluding Coloured and Native population outside police zone, numbering 183 833 in 1946 and 212 360 in 1951.
[41] Including white population (1 008) of Walvis Bay, which is an integral part of the Union of South Africa but is administered as if it were part of South West Africa.
[42] Excluding armed forces.
[43] Single population includes persons of unknown marital status.
[44] Excluding Algerian refugees temporarily in the country.
[45] Excluding armed forces, 209 persons in transit and 4 020 Polish refugees in camps.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[38] Créée le 1er juillet 1960 par la réunion de l'ancienne Somalie britannique et de l'ancien Territoire sous tutelle de la Somalie sous administration italienne, qui ont été proclamés indépendants le 26 juin et le 1er juillet 1960 respectivement.
[39] Ancienne Somalie italienne seulement.
[40] Y compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain. Non compris les personnes de couleur (métis) et les indigènes vivant en dehors de la Zone de police (183 833 en 1946 et 212 360 en 1951).
[41] Y compris la population blanche (1 008) de Walvis Bay, ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.
[42] Non compris les militaires.
[43] Les personnes dont la situation matrimoniale est inconnue sont comprises parmi les célibataires.
[44] Non compris les réfugiés algériens se trouvant temporairement dans le pays.
[45] Non compris les militaires, 209 personnes de passage et 4 020 réfugiés polonais vivant dans des camps.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

* Provisional.
[10] Data for population 35-44 years of age are included with age-group 25-34 years.
[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[28] For 15-29 years.
[29] For 40-49 years.
[30] For 50 years and over.
[36] For 16 years and over.
[46] Including armed forces outside country and excluding enemy prisoners of war within country.
[47] Excluding data for Walvis Bay (population 3 329 in 1951) which is an integral part of the Union but is administered as if it were part of South West Africa.
[48] Excluding nomad population, numbering 12 000 in 1937 and 55 073 (27 270 males, 27 803 females) in 1947. For 1947, excluding alien armed forces, their dependants and enemy prisoners of war in the area.
[49] For 16-24 years.
[50] Excluding tourists and members of UK and US armed forces and their dependants stationed in the area.
[51] For 25 to 39 years.
[52] *De jure* population. For 1931 and 1941, excluding Newfoundland; for 1952-1955 and 1957-1959, excluding Yukon and Northwest Territories.
[53] *De jure* population, but including armed forces stationed in the area.
[54] *De jure* population.

* Provisoire.
[10] Les données du groupe 35-44 ans sont comprises dans la colonne 25-34 ans.
[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[28] 15-29 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[36] 16 ans et plus.
[46] Y compris les militaires hors du pays mais non compris les prisonniers de guerre ennemis dans le pays.
[47] Non compris Walvis Bay (3 329 habitants en 1951), ville qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain.
[48] Non compris les nomades au nombre de 12 000 en 1937 et de 55 073 (27 270 du sexe masculin et 27 803 du sexe féminin) en 1947. Pour 1947, non compris les militaires étrangers et les personnes à leur charge, ainsi que les prisonniers de guerre ennemis se trouvant sur le territoire.
[49] 16-24 ans.
[50] Non compris les touristes ni les militaires américains et britanniques se trouvant sur le territoire, ainsi que les personnes à leur charge les accompagnant.
[51] 25-39 ans.
[52] Population de droit. Pour 1931 et 1941, non compris Terre-Neuve; pour 1952-1955 et 1957-1959, non compris le Yukon et les Territoires du Nord-Ouest.
[53] Population de droit, mais y compris les militaires en garnison sur le territoire.
[54] Population de droit.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[16] For 20-29 years.
[17] For 30-39 years.
[18] For 40 years and over.
[21] Reason for discrepancy between figures shown here and corresponding figures in Table 5 not ascertained.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[30] For 50 years and over.
[31] Married population excludes persons consensually married, included with single population.
[36] For 16 years and over.
[43] Single population includes persons of unknown marital status.
[53] *De jure* population, but including armed forces stationed in the area.
[54] *De jure* population.
[55] For 14 years and over.
[56] For 14-20 years.
[57] For 21-30 years.
[58] For 31-40 years.
[59] For 41 years and over.
[60] Single population includes persons of unknown marital status and those consensually married.
[61] For 14-19 years.
[62] Persons consensually married appear to be included with single population.
[63] For 15-22 years.
[64] For 23-29 years.
[65] *De jure* population, but excluding 84 diplomatic personnel outside country.
[66] For 16 to 19 years.
[67] Data for population 20 to 39 years of age shown in columns for age-group 25-34 years.
[68] Excluding Canal Zone, shown separately, and also tribal Indian population, numbering 55 987 in 1940 and 48 654 in 1950.
[69] For 35-49 years.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[16] 20-29 ans.
[17] 30-39 ans.
[18] 40 ans et plus.
[21] On ne sait pas pourquoi ces chiffres s'écartent des chiffres correspondants du tableau 5.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[30] 50 ans et plus.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[36] 16 ans et plus.
[43] Les personnes dont la situation matrimoniale est inconnue sont comprises parmi les célibataires.
[53] Population de droit, mais y compris les militaires en garnison sur le territoire.
[54] Population de droit.
[55] 14 ans et plus.
[56] 14-20 ans.
[57] 21-30 ans.
[58] 31-40 ans.
[59] 41 ans et plus.
[60] Les personnes dont la situation matrimoniale est inconnue et celles qui vivent en état d'union consensuelle sont comprises parmi les célibataires.
[61] 14-19 ans.
[62] Les personnes vivant en état d'union consensuelle semblent être classées avec les célibataires.
[63] 15-22 ans.
[64] 23-29 ans.
[65] Population de droit, mais non compris 84 agents diplomatiques en poste hors du pays.
[66] 16-19 ans.
[67] 20-39 ans.
[68] Non compris la Zone du Canal qui fait l'objet d'une rubrique distincte et compte non tenu des Indiens vivant en tribus (55 987 en 1940 et 48 654 en 1950).
[69] 35-49 ans.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[See note at head of table. — Voir note au début du tableau.]

[6] Married population excludes persons separated from spouse.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[43] Single population includes persons of unknown marital status.
[53] De *jure* population, but including armed forces stationed in the area.
[54] De *jure* population.
[70] Prior to 1960, excluding Alaska and Hawaii (which became the 49th and 50th states of the Union on 3 January and 21 August 1959 respectively).
[71] Estimates based on results of Current Population Survey, and refer to civilian population including members of the armed forces living off post or with their families on post. Prior to 1953, estimates not strictly comparable with later data.
[72] Data for persons separated from spouse were not tabulated. Most probably they were included with data for divorced persons.
[73] De *jure* population, but excluding members of the armed forces overseas.
[74] Data shown for total population refer to persons 14 years of age and over, for age-group 15-24 years refer to persons 14-24 years.
[75] Data are based on a 20 per cent sample of census returns.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[43] Les personnes dont la situation matrimoniale est inconnue sont comprises parmi les célibataires.
[53] Population de droit, mais y compris les militaires en garnison sur le territoire.
[54] Population de droit.
[70] Pour les années antérieures à 1960, non compris l'Alaska et Hawaii qui sont devenus les 49ème et 50ème Etats de l'Union le 3 janvier et le 21 août 1959 respectivement.
[71] Estimations fondées sur les résultats d'une enquête démographique courante et se rapportant à la population civile y compris les militaires vivant en ville ou avec leur famille au lieu de cantonnement. Les estimations des années antérieures à 1953 ne sont pas strictement comparables à celles des années suivantes.
[72] Les personnes séparées de leur conjoint n'ont pas été classées à part. La majorité d'entre elles ont été probablement comprises parmi les divorcés.
[73] Population de droit, mais non compris les militaires à l'étranger.
[74] Les données présentées pour la population totale se rapportent aux personnes de 14 ans et plus; celles du groupe 15-24 ans se rapportent aux personnes âgées de 14 à 24 ans.
[75] D'après un échantillon de 20 pour cent des bulletins de recensement.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[6] Married population excludes persons separated from spouse.
[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[28] For 15-29 years.
[51] For 25-39 years.
[29] For 40-49 years.
[30] For 50 years and over.
[55] For 14 years and over.
[62] Persons consensually married appear to be included with single population.
[69] For 35 to 49 years.
[76] Data estimated from results of a demographic sample survey covering approximately 5 per cent of households in Kingston Metropolitan Area and 10 per cent of households in rural area. Excluding members of the military services and inmates of institutions. Married population excludes those consensually married persons who were never before married; includes divorced persons.
[77] Single population includes widowed persons who had been consensually married.
[78] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[79] For 14-24 years.
[80] Note suppressed.
[81] Population actually enumerated, i.e., excluding 8.4 per cent (227 866) adjustment for underenumeration and estimate of 87 000 for tribal Indian population.
[82] Excluding Indian jungle population, numbering 45 249 in 1950. Also excluding schedules not tabulated by age, sex, and marital status, numbering 16 713 in 1940 and 31 960 in 1950.
[83] Married population includes divorced persons (tabulated with separated) numbering 2 569 for males and 2 801 for females 15 years and over in 1940.
[84] Excluding Amerindians of remote districts, estimated at 9 700 in 1921, 7 379 in 1931, and 6 023 in 1946.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[28] 15-29 ans.
[51] 25-39 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[55] 14 ans et plus.
[62] Les personnes vivant en état d'union consensuelle semblent être classées avec les célibataires.
[69] 35-49 ans.
[76] Estimation d'après les résultats d'une enquête démographique par sondage ayant porté sur 5 pour cent environ des ménages de la zone métropolitaine de Kingston et sur 10 pour cent des ménages dans les régions rurales. Non compris les militaires et les pensionnaires d'institutions. La population mariée ne comprend pas les personnes vivant en état d'union consensuelle qui n'avaient jamais été mariées auparavant, mais elle comprend les divorcés.
[77] La population célibataire comprend un nombre inconnu de veufs ou veuves ayant vécu en état d'union consensuelle.
[78] Population de droit effectivement dénombrée, c.à.d. compte tenu d'un ajustement de 1 pour cent pour sous-dénombrement.
[79] 14-24 ans.
[80] Note supprimée.
[81] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement de 8,4 pour cent (227 866) et des Indiens vivant en tribus (estimés à 87 000).
[82] Non compris les Indiens de la jungle (45 249 en 1950). Compte non tenu également des bulletins non classés selon l'âge, le sexe et la situation matrimoniale (16 713 en 1940 et 31 960 en 1950).
[83] La population mariée comprend les divorcés (classés avec les séparés) soit 2 569 pour les hommes et 2 801 pour les femmes âgés de 15 ans et plus en 1940.
[84] Non compris les Amérindiens vivant dans les régions reculées et dont le nombre a été estimé à 9 700 en 1921, 7 379 en 1931 et 6 023 en 1946.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[7] For 20 years and over.
[16] For 20-29 years.
[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[28] For 15-29 years.
[29] For 40-49 years.
[30] For 50 years and over.
[31] Married population excludes persons consensually married, included with single population.
[62] Persons consensually married appear to be included with single population.
[85] Population actually enumerated, i.e., excluding an adjustment for underenumeration estimated at 2.4 per cent in 1930, 1.4 per cent in 1940, and 5.8 per cent in 1952.
[86] Including territory awarded to Peru in 1930.
[87] Single population includes persons whose marriage has been annulled, numbering 1 099 males and 2 483 females 15 years of age and over.
[88] For 1951, excluding adjustment for underenumeration, estimated at 191 683 and indigenous population, numbering 127 980.
[89] Excluding indigenous population, numbering 4 775 (2 606 males, 2 169 females) of unknown age and marital status.
[90] Married population includes divorced persons.
[91] *De jure* population, but excluding Indian jungle population.
[92] Including data for dependencies.
[93] Excluding 1 321 schedules not tabulated by marital status, age and sex.
[94] Population actually enumerated, but excluding 12 881 schedules not tabulated by marital status, age and sex. Also excluding Indian jungle population, estimated at 17 000, and adjustment for underenumeration, estimated at 50 067.
[95] Population actually enumerated, i.e., excluding adjustment for Indian jungle population, estimated at 350 000, and underenumeration, estimated at 465 144.
[96] Excluding 865 males and 1 105 females of unknown age, not tabulated by marital status.
[97] Excluding Indian jungle population, numbering 103 492 in 1936, 100 600 in 1941, and 56 705 in 1950.
[98] Included in data for India.
[99] Excluding military personnel and data for Perim and port.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[7] 20 ans et plus.
[16] 20-29 ans.
[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[28] 15-29 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[62] Les personnes vivant en état d'union consensuelle semblent être classées avec les célibataires.
[85] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,4 pour cent en 1930, 1,4 pour cent en 1940 et 5,8 pour cent en 1952.
[86] Y compris les territoires attribués au Pérou en 1930.
[87] La population célibataire comprend les personnes dont le mariage a été annulé (1 099 hommes et 2 483 femmes âgés de 15 ans et plus).
[88] Pour 1951, compte non tenu d'un ajustement pour sous-dénombrement estimé à 191 683 et non compris 127 980 indigènes.
[89] Non compris 4 775 (2 606 du sexe masculin et 2 169 du sexe féminin) indigènes dont l'âge et la situation matrimoniale sont inconnus.
[90] Les divorcés sont compris dans la population mariée.
[91] Population de droit, mais non compris les Indiens de la jungle.
[92] Y compris les dépendances.
[93] Non compris 1 321 bulletins non classées selon la situation matrimoniale, l'âge et le sexe.
[94] Population effectivement dénombrée mais non compris 12 881 bulletins non classés selon la situation matrimoniale, l'âge et le sexe. Compte non tenu également de 17 000 (estimation) Indiens de la jungle et d'un ajustement de 50 067 pour sous-dénombrement.
[95] Population effectivement dénombrée, c.à.d. non compris 350 000 (estimation) Indiens de la jungle et compte non tenu du sous-dénombrement estimé à 465 144.
[96] Non compris 865 personnes du sexe masculin et 1 105 du sexe féminin d'âge inconnu et non classées selon la situation matrimoniale.
[97] Non compris les Indiens de la jungle (103 492 en 1936, 100 600 en 1941 et 56 705 en 1950).
[98] Compris dans les chiffres de l'Inde.
[99] Non compris les militaires, ainsi que Périm et le port.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

* Provisional.

[6] Married population excludes persons separated from spouse.

[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.

[98] Included in data for India.

[99] Excluding military personnel and data for Perim and port.

[100] Excludes persons not tabulated by marital status, numbering, for all ages, 21 453 and 9 925 for males, 21 640 and 9 724 for females in 1921 and 1931, respectively.

[101] Data are *de jure* population in 252 towns only, approximating the urban area of the Union; these are the results of the first stage of a multi-stage sample census.

[102] Data are *de jure* population in 2 143 village tracts in Burma proper; these are the results of the second stage of a multi-stage sample census.

[103] Excluding non-resident military and shipping personnel, together numbering 5 944 in 1921 and 36 606 in 1946.

[104] Population actually enumerated, i.e., excluding 0.7 per cent adjustment for underenumeration.

[105] For Taiwanese nationals only; for 1940, including those residents called into Japanese military service who might be abroad due to movements of military forces. During these years, Taiwanese were more than 93 per cent of the total population.

[106] Former British dependency; declared independent 16 August 1960. Data exclude persons in military and special internment camps, together numbering 12 422 at 1946 census.

[107] Excluding transients afloat, numbering 822 at 1947 census.

[108] Excluding nomadic aborigines, numbering 29 648 (15 601 males and 14 047 females), non-locally domiciled military and civilian services personnel, numbering 12 519, and Japanese prisoners of war, numbering 1 394.

[109] Pre-partition India, i.e., including Aden Colony, Kashmir-Jammu the final states of which has not yet been determined, Pakistan and Sikkim, but excluding Burma (separated from India in 1932), and for 1931 excluding Aden Colony (separated from India in 1937) and Sikkim. Also excluding persons not tabulated by marital status, numbering 1 892 823 and 1 613 394 for males and 1 656 122 and 1 445 395 for females in 1921 and 1931, respectively.

[110] De jure population actually enumerated (excluding a 1.1 per cent adjustment for net underenumeration). Excluding Kashmir-Jammu, the final status of which has not yet been determined, the Part "B" tribal areas of Assam where census could not be taken, settlements of Karikal, Mahé, Pondichéry and Yanaon which did not become part of India until 1 November 1954 (population estimated at 323 000 in 1952) and persons whose records were destroyed by fire, numbering 74 117 for males, 37 419 for females. Including data for Sikkim (population enumerated at 72 210 for males and 65 515 for females in 1951).

* Provisoire.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.

[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.

[98] Compris dans les chiffres de l'Inde.

[99] Non compris les militaires, ainsi que Périm et le port.

[100] Non compris les personnes non classées selon la situation matrimoniale, soit, pour tous les âges, 21 453 et 9 925 du sexe masculin, et 21 640 et 9 724 du sexe féminin en 1921 et en 1931 respectivement.

[101] Population de droit de 252 villes seulement, correspondant approximativement aux zones urbaines de l'Union; résultats du premier degré d'une enquête par sondage à plusieurs degrés.

[102] Population de droit de 2 143 villages de Birmanie proprement dite; résultat du deuxième degré d'une enquête par sondage à plusieurs degrés.

[103] Non compris les militaires et agents des compagnies maritimes non résidants, soit 5 944 en 1921 et 36 606 en 1946.

[104] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 0,7 pour cent pour sous-dénombrement.

[105] Nationaux taïwanais seulement et pour 1940, y compris les résidants mobilisés dans l'armée japonaise et qui pouvaient se trouver à l'étranger par suite des mouvements de troupes. Pendant ces années, les Taïwanais représentaient plus de 93 pour cent de la population.

[106] Ancienne possession britannique proclamée indépendante le 16 août 1960. Non compris les personnes se trouvant dans des camps militaires et des camps d'internement spéciaux, soit au total 12 422 au recensement de 1946.

[107] Y compris les personnes de passage à bord de bateaux, soit 822 au recensement de 1947.

[108] Non compris 29 648 nomades aborigènes (15 601 du sexe masculin et 14 047 du sexe féminin), 12 519 militaires et fonctionnaires civils non domiciliés sur le territoire et 1 394 prisonniers de guerre japonais.

[109] Inde avant le partage, c.à.d. y compris la colonie d'Aden, le Cachemire-Jammu dont le statut définitif n'a pas encore été determiné, le Pakistan et le Sikkim, mais non compris la Birmanie (détachée de l'Inde en 1932); pour 1931, non compris la colonie d'Aden (détachée de l'Inde en 1937) et le Sikkim. Compte non tenu également des personnes non classées selon la situation matrimoniale, soit 1 892 823 et 1 613 394 du sexe masculin, et 1 656 122 et 1 445 395 du sexe féminin en 1921 et en 1931 respectivement.

[110] Population de droit effectivement dénombrée (compte non tenu d'un ajustement de 1,1 pour cent pour sous-dénombrement net). Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, les zones tribales (partie B) de l'Assam où le recensement n'a pu avoir lieu, et les établissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954 (population estimée à 323 000 en 1952); non compris également les personnes dont les dossiers ont été détruits par l'incendie, soit 74 117 du sexe masculin et 37 419 du sexe féminin. Y compris le Sikkim (population dénombrée en 1951 : 72 210 du sexe masculin et 65 515 du sexe féminin).

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[6] Married population excludes persons separated from spouse.
[10] Data for population 35-44 years of age are included with age-group 25-34 years.
[98] Included in data for India.
[109] Pre-partition India, i.e., including Aden Colony, Kashmir-Jammu, Pakistan and Sikkim, but excluding Burma (separated from India in 1932), and for 1931 excluding Aden Colony (separated from India in 1937) and Sikkim. Also excluding persons not tabulated by marital status, numbering 1 892 823 and 1 613 394 for males and 1 656 122 and 1 445 395 for females in 1921 and 1931, respectively.
[110] De jure population actually enumerated (excluding a 1.1 per cent adjustment for net underenumeration). Excluding Kashmir-Jammu, the final status of which has not yet been determined, the Part "B" tribal areas of Assam where census could not be taken, settlements of Karikal, Mahé, Pondichéry and Yanaon which did not become part of India until 1 November 1954 (population estimated at 323 000 in 1952) and persons whose records were destroyed by fire, numbering 74 117 for males, 37 419 for females. Including data for Sikkim (population enumerated at 72 210 for males and 65 515 for females in 1951).
[111] Territory of 1930. Including Ryukyu Islands (population 577 509).
[112] Excluding Allied military and civilian personnel and their dependants. For 1950, excluding Tokara Archipelago (population 2 658 in 1955) and Amami Islands (population 205 363 in 1955) which reverted to Japan from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively. For 1955, population actually enumerated,, i.e., excluding 0.39 per cent adjustment for underenumeration.
[113] Excluding alien armed forces, civilian aliens employed by armed forces, foreign diplomatic personnel, and other foreigners, the latter numbering 23 988.
[114] Excluding foreigners (except for 122 males from India included in 1946).
[115] Excluding persons not tabulated by marital status, age and sex, numbering 21 546 for both sexes.
[116] Excluding transients and members of British armed forces, numbering 1 442 and 66, respectively.
[117] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Junagadh, Manavadar, Gilgit, Baltistan and the port and peninsula of Gwadar, acquired from Muscat and Oman 8 September 1958. Also excluding an estimated Pakistani population in Frontier Regions only partially covered by census, and foreigners numbering 1 755 152 and 206 669, respectively, and adjustment for underenumeration in urban areas amounting to 5 per cent or 393 166 persons of both sexes.
[118] Data shown are for total population 10 years of age and over and for age-groups 10-39, 40-59 and 60 years and over.
[119] Included in age-group 10-39 years.
[120] Territory formerly under British mandate. Excluding Bedouin population, numbering 66 553.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[10] Les données du groupe 35-44 ans sont comprises dans la colonne 25-34 ans.
[98] Compris dans les chiffres de l'Inde.
[109] Inde avant le partage, c.à.d. y compris la colonie d'Aden, le Cachemire-Jammu, le Pakistan et le Sikkim, mais non compris la Birmanie (détachée de l'Inde en 1932); pour 1931, non compris la colonie d'Aden (détachée de l'Inde en 1937) et le Sikkim. Compte non tenu également des personnes non classées selon la situation matrimoniale, soit 1 892 823 et 1 613 394 du sexe masculin, et 1 656 122 et 1 445 395 du sexe féminin en 1921 et en 1931 respectivement.
[110] Population de droit effectivement dénombrée (compte non tenu d'un ajustement de 1,1 pour cent pour sous-dénombrement net). Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, les zones tribales (partie B) de l'Assam où le recensement n'a pu avoir lieu, et les établissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954 (population estimée à 323 000 en 1952); non compris également les personnes dont les dossiers ont été détruits par l'incendie, soit 74 117 du sexe masculin et 37 419 du sexe féminin. Y compris le Sikkim (population dénombrée en 1951 : 72 210 du sexe masculin et 65 515 du sexe féminin).
[111] Territoire de 1930. Y compris les îles Ryû-Kyû (577 509 habitants).
[112] Non compris les militaires et le personnel civil alliés, ainsi que les personnes à leur charge les accompagnant. Pour 1950, non compris l'archipel des Tokara (2 658 habitants en 1955) et les îles Amami (205 363 habitants en 1955) qui ont été détachés des Ryû-Kyû et rattachés au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement. Pour 1955, population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 0,39 pour cent pour sous-dénombrement.
[113] Non compris les militaires étrangers, les civils étrangers employés par les forces armées, le personnel diplomatique étranger et 23 988 autres étrangers.
[114] Non compris les étrangers (sauf, en 1946, 122 du sexe masculin venant de l'Inde).
[115] Non compris 21 546 personnes des deux sexes non classées selon la situation matrimoniale, l'âge et le sexe.
[116] Non compris 1 442 personnes de passage et 66 militaires britanniques.
[117] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le Junagadh, le Manavadar, le Gilgit, le Baltistan, ainsi que le port et la péninsule de Gwadar cédés par Mascate et Oman le 8 septembre 1958. Non compris en outre la population pakistanaise (estimée à 1 755 152) des régions frontalières qui n'a été que partiellement recensée, ni les étrangers (dont le nombre a été estimé à 206 669); compte non tenu d'un ajustement de 5 pour cent, soit 393 166, pour sous-dénombrement dans les régions urbaines.
[118] Les chiffres donnés concernent la population totale âgée de 10 ans et plus, ainsi que les groupes 10-39, 40-59 et 60 ans et plus.
[119] Compris dans le groupe 10-39 ans.
[120] Ancien mandat britannique. Non compris 66 553 bédouins.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

* Provisional.
[6] Married population excludes persons separated from spouse.
[31] Married population excludes persons consensually married, included with single population.
[98] Included in data for India.
[121] Data based on results of Philippine Statistical Survey of Households.
[122] Included in data for Japan above.
[123] Okinawa Prefecture only. Including Japanese civilian and military population, but excluding foreigners, Formosans, Koreans, and other so-called "territorials" from outlying parts of the Japanese Empire.
[124] Ryukyu nationals only. Present territory, i.e., excluding Tokara Archipelago and Amami Islands which reverted to Japan 5 December 1951 and 25 December 1953, respectively.
[125] Excluding Allied military and civilian personnel and their dependants stationed in the area.
[126] Excluding non-locally domiciled military and civilian services personnel and their dependants, together numbering 25 860 in 1947 and 27 299 in 1957; also excluding transients afloat, numbering 2 638 in 1947 and 3 466 in 1957. For 1947, including population of Cocos (Keeling) Islands and Christmas Island, which became External Territories of Australia on 23 November 1955 and 1 October 1958, with population numbering 1 814 and 866, respectively. For males, also excluding enemy prisoners of war, numbering 7 517.
[127] Includes all male population 15 and 16 years of age, numbering 401 957, for whom marital status is not available.
[128] Estimated from results of a demographic and economic sample survey covering 2 241 villages and 64 large municipalities; total is subject to error of ± 1.58 per cent.
[129] Excluding data for Hatay, acquired from Syria 23 June 1939.
[130] Phuoc-tuy province, with a population of 68 975 males and 72 422 females, about 1 per cent of the population of the whole country.

* Provisoire.
[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[98] Compris dans les chiffres de l'Inde.
[121] D'après les résultats de l'enquête statistique philippine sur les ménages.
[122] Compris dans les chiffres donnés ci-dessus pour le Japon.
[123] Préfecture d'Okinawa seulement. Y compris les civils et militaires japonais, mais non compris les étrangers, les Formosans, les Coréens et autres "habitants des territoires", c.à.d. des marches de l'Empire japonais.
[124] Nationaux des Ryû-Kyû seulement. Territoire actuel, c.à.d. non compris l'archipel des Tokara et les îles Amami qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.
[125] Non compris les militaires et le personnel civil alliés en poste sur le territoire, ainsi que les personnes à leur charge les accompagnant.
[126] Non compris les militaires et les fonctionnaires civils non domiciliés sur le territoire, ainsi que les personnes à leur charge les accompagnant (25 860 en 1947 et 27 299 en 1957); non compris également les personnes de passage à bord de bateaux (2 638 en 1947 et 3 466 en 1957). Pour 1947, y compris la population des îles Cocos (Keeling) (1 814) et de l'île Christmas (866) qui sont devenues Territoires extérieurs de l'Australie le 23 novembre 1955 et le 1er octobre 1958 respectivement. Dans le cas des hommes, non compris en outre 7 517 prisonniers de guerre ennemis.
[127] Y compris toute la population masculine de 15 et 16 ans (401 957) dont la situation matrimoniale est inconnue.
[128] Estimation d'après les résultats d'une enquête démographique et économique par sondage ayant porté sur 2 241 villages et 64 municipalités importantes; le total est sujet à une erreur de ± 1,58 pour cent.
[129] Non compris Hataï, cédée par la Syrie le 23 juin 1939.
[130] Province de Phuoc-tuy qui, avec 68 975 habitants du sexe masculin et 72 422 du sexe féminin, renferme environ 1 pour cent de la population totale du pays.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[6] Married population excludes persons separated from spouse.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[43] Single population includes persons of unknown marital status.
[54] *De jure* population.
[131] Excluding Eupen and Malmedy, ceded by Germany in 1925.
[132] Excluding Southern Dobruja, ceded by Romania in 1940.
[133] For 1930, territory prior to World War II, i.e., including Subcarpathia and a part of Slovakia, ceded to USSR in 1947. For 1947, excluding Bratislava Bridgehead, acquired from Hungary in 1947 (population 3 379 in 1941).
[134] Excluding Faeroe Islands and Greenland, shown separately. Beginning 1940, *de jure* population.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[43] Les personnes dont la situation matrimoniale est inconnue sont comprises parmi les célibataires.
[54] Population de droit.
[131] Non compris Eupen et Malmédy, cédés par l'Allemagne en 1925.
[132] Non compris la Dobroudja méridionale, cédée par la Roumanie en 1940.
[133] Pour 1930, territoire d'avant la deuxième guerre mondiale, c.à.d. y compris la Subcarpathie, et une partie de la Slovaquie cédées à l'URSS en 1947. Pour 1947, non compris la tête de pont de Bratislava cédée par la Hongrie en 1947 (3 379 habitants en 1941).
[134] Non compris les îles Féroé et le Groënland qui font l'objet de rubriques distinctes. A partir de 1940, population de droit.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[See note at head of table. — Voir note au début du tableau.]

[1] Age classification based on year of birth rather than on completed years of age.
[8] For 20-24 years.
[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[28] For 15-29 years.
[29] For 40-49 years.
[30] For 50 years and over.
[54] *De jure* population.
[135] For 1920 and 1930, Finnish nationals only, including those outside country; for 1940, Finnish nationals in Finland only; beginning 1955, population present in area, including Finnish nationals temporarily outside country.
[136] For 1930, including Petsamo, the Karelian Isthmus and other small areas ceded to USSR 1940-1947. For 1940, including small areas ceded to USSR 1944-1947.
[137] Prior to 1952, excluding communes of Tende and Brigue (population 2 848 at 1954 census), ceded by Italy in 1947. For 1946, also excluding an estimated 663 000 prisoners of war. Estimates exclude alien armed forces, members of foreign diplomatic service in country, French diplomatic service outside country, and career military service outside country except those on duty in Germany and Austria. Includes civilian residents temporarily outside country, military conscripts wherever stationed and all personnel on duty in Germany and Austria and their dependants, the three latter estimated at 186 500 in 1954.
[138] Data are based on a 5 per cent sample of census returns.
[139] Including prisoners of war, civilian internees and refugees in transit camps, together numbering 133 327 for Eastern Germany, 247 240 for Federal Republic of Germany, and 3 756 in Berlin.
[140] *De jure* population except for Bremen in 1946; present-in-area population in former Saar but excluding persons temporarily present. For 1950 and 1957, excluding former Saar.
[141] Married population excludes unknown number of persons separated from spouse in US and French zones of occupation.
[142] Marital status classification based on results of 1 per cent sample survey of all households (micro-census) taken in October of 1957, 1958 and 1959.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[8] 20-24 ans.
[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[28] 15-29 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[54] Population de droit.
[135] Pour 1920 et 1930, nationaux finlandais seulement, y compris ceux qui se trouvaient hors du pays; pour 1940, nationaux finlandais en Finlande seulement; à partir de 1955, population présente sur le territoire, y compris les nationaux finlandais temporairement hors du pays.
[136] Pour 1930, y compris les territoires cédés à l'URSS en 1940-1947 (Petsamo, isthme de Carélie et diverses zones peu étendues). Pour 1940, y compris diverses zones peu étendues cédées à l'URSS en 1944-1947.
[137] Pour les années antérieures à 1952, non compris les communes de Tende et de Brigue (2 848 habitants au recensement de 1954), cédées par l'Italie en 1947. Pour 1946, non compris en outre 663 000 (estimation) prisonniers de guerre. Les estimations ne comprennent pas les militaires étrangers, le personnel diplomatique étranger en poste dans le pays, le personnel diplomatique français en poste à l'étranger et les militaires de carrière en garnison à l'étranger à l'exception de l'Allemagne et de l'Autriche. Y compris les civils résidant temporairement à l'étranger, les militaires du contingent où qu'ils se trouvent et tous les civils et militaires en poste en Allemagne et en Autriche ainsi que les personnes à leur charge les accompagnant, soit au total 186 500 personnes en 1954.
[138] D'après les résultats d'un échantillon de 5 pour cent des bulletins de recensement.
[139] Y compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 133 327 pour l'Allemagne orientale, 247 240 pour la République fédérale d'Allemagne et 3 756 pour Berlin.
[140] Population de droit sauf Brême en 1946; population présente dans l'ancienne Sarre mais non compris les personnes s'y trouvant temporairement. Pour 1950 et 1957 non compris l'ancienne Sarre.
[141] Non compris dans la population mariée un nombre inconnu de personnes séparées de leur conjoint, dans les zones américaine et française d'occupation.
[142] Classement selon la situation matrimoniale d'après les résultats d'une enquête par sondage ayant porté sur 1 pour cent des ménages (micro-recensement) et effectuée en octobre 1957, 1958 et 1959.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[See note at head of table. — Voir note au début du tableau.]

[1] Age classification based on year of birth rather than on completed years of age.
[7] For 20 years and over.
[16] For 20-29 years.
[17] For 30-39 years.
[18] For 40 years and over.
[31] Married population excludes persons consensually married, included with single population.
[36] For 16 years and over.
[49] For 16-24 years.
[54] De *jure* population.
[143] Excluding dependants of armed forces stationed in the area and persons accommodated in harbour shipping, numbering 1 123 and 208, respectively, in 1931 and 1 439 and 479, respectively, in 1951.
[144] Prior to 1951, excluding Dodecanese Islands, ceded by Italy in 1947.
[145] Included in age-group 20-29 years.
[146] Including Bratislava Bridgehead, ceded to Czechoslovakia in 1947 (population 3 379 in 1941).
[147] Married population excludes consensually married, included with single, and persons separated from spouse.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[7] 20 ans et plus.
[16] 20-29 ans.
[17] 30-39 ans.
[18] 40 ans et plus.
[31] La population mariée ne comprend pas un nombre inconnu de personnes vivant en état d'union consensuelle, qui ont été comptées avec les célibataires.
[36] 16 ans et plus.
[49] 16-24 ans.
[54] Population de droit.
[143] Non compris les membres des familles de militaires en garnison sur le territoire et les personnes logées à bord de bateaux dans le port, soit 1 123 208 respectivement en 1931 et 1 439 et 479 respectivement en 1951.
[144] Pour les années antérieures à 1951, non compris le Dodécanèse cédé par l'Italie en 1947.
[145] Compris dans le groupe 20-29 ans.
[146] Y compris la tête de pont de Bratislava cédée à la Tchécoslovaquie en 1947 (3 379 habitants en 1941).
[147] La population mariée ne comprend pas les personnes vivant en état d'union consensuelle (lesquelles sont comprises avec les célibataires), ni les personnes séparées de leur conjoint.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[1] Age classification based on year of birth rather than on completed years of age.
[6] Married population excludes persons separated from spouse.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[54] *De jure* population.
[148] Territory of 1924-1938, i.e., including former Free Territory of Trieste and territories ceded to Yugoslavia and France in 1947. Excluding military and civilian personnel outside country.
[149] Excluding non-Maltese armed forces stationed in the area and non-Maltese crews of merchant ships in harbour; for 1957, including civilian nationals temporarily outside country.
[150] Territory of 1923-1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany.
[151] Data exclude 394 495 schedules not tabulated by marital status, age and sex.

[1] Classement par âge d'après l'année de naissance et non d'après le nombre d'années révolues.
[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[54] Population de droit.
[148] Territoire de 1924-1938, c.à.d. y compris l'ancien Territoire libre de Trieste et les territoires cédés à la Yougoslavie et à la France en 1947. Non compris les militaires et le personnel civil en dehors du pays.
[149] Non compris les militaires non maltais en garnison sur le territoire et les équipages non maltais de navires marchands dans le port; pour 1957 non compris les civils nationaux temporairement hors du pays.
[150] Territoire de 1923-1937, c.à.d. y compris les régions cédées à l'URSS après la deuxième guerre mondiale, mais non compris Dantzig et les autres régions qui faisaient précédemment partie de l'Allemagne.
[151] Non compris 394 495 bulletins non classés selon la situation matrimoniale, l'âge et le sexe.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[29] For 40-49 years.
[30] For 50 years and over.
[51] For 25-39 years.
[54] *De jure* population.
[55] For 14 years and over.
[79] For 14-24 years.
[152] Estimates include armed forces outside country and merchant seamen at sea but exclude enemy prisoners of war and Commonwealth and foreign armed forces within the country.
[153] Single population 15-24 includes all persons 15 years of age, irrespective of true marital status, which has not been ascertained.

[29] 40-49 ans.
[30] 50 ans et plus.
[51] 25-39 ans.
[54] Population de droit.
[55] 14 ans et plus.
[79] 14-24 ans.
[152] Y compris les militaires hors du pays et les marins de commerce en mer, mais non compris les prisonniers de guerre ennemis, les militaires du Commonwealth et étrangers dans le pays.
[153] Le chiffre indiqué pour la population célibataire du groupe 15-24 ans comprend toutes les personnes âgées de 15 ans, quelle que soit leur situation matrimoniale véritable, laquelle n'a pas été déterminée.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[See note at head of table. — Voir note au début du tableau.]

[6] Married population excludes persons separated from spouse.
[17] For 30-39 years.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[28] For 15-29 years.
[29] For 40-49 years.
[30] For 50 years and over.
[153] Single population 15-24 includes all persons 15 years of age, irrespective of true marital status, which has not been ascertained.
[154] For 1931, excluding territory ceded by Italy in 1947. Beginning 1948, *de jure* population, excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954, with a population estimated at 54 876 in 1954.
[155] Excluding full-blooded aborigines, estimated at 46 638 in June 1947 and 39 319 in June 1954, and armed forces stationed outside country.
[156] Excluding transient afloat and non-locally domiciled military and civilian services personnel and their dependants.
[157] Included with Singapore, of which Christmas Island was a colony until 1 October 1958.
[158] For 18 years and over.
[159] For 18-24 years.
[160] Including data for condominium of Canton and Enderbury.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[17] 30-39 ans.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[28] 15-29 ans.
[29] 40-49 ans.
[30] 50 ans et plus.
[153] Le chiffre indiqué pour la population célibataire du groupe 15-24 ans comprend toutes les personnes âgées de 15 ans, quelle que soit leur situation matrimoniale véritable, laquelle n'a pas été déterminée.
[154] Pour 1931, non compris les territoires cédés par l'Italie en 1947. A partir de 1948, population de droit, non compris Koper et Buje, c.à.d. la partie de l'ancien Territoire libre de Trieste rattachée à la Yougoslavie en 1954 et dont la population était estimée à l'époque à 54 876.
[155] Non compris les aborigènes de race pure estimés à 46 638 en juin 1947 et à 39 319 en juin 1954, ni les militaires en garnison hors du pays.
[156] Non compris les personnes de passage à bord de bateaux ni les militaires et les fonctionnaires civils domiciliés en dehors du territoire et les personnes à leur charge les accompagnant.
[157] Compris dans les chiffres de Singapour dont l'île Christmas était une colonie jusqu'au 1er octobre 1958.
[158] 18 ans et plus.
[159] 18-24 ans.
[160] Y compris le Condominium de Canton et Enderbury.

10. Single and married population 15 years of age and over by age and sex (continued) — Population célibataire et population mariée de 15 ans et plus, selon l'âge et le sexe (suite)

[6] Married population excludes persons separated from spouse.
[25] For number of persons consensually married or separated from spouse, included with married population, see *Demographic Yearbook* 1949/50, 1954, 1955 or 1958.
[36] For 16 years and over.
[49] For 16-24 years.
[161] For 19 years and over.
[162] For 19-24 years.
[163] Excluding armed forces outside country, numbering 2 182 at 1956 census, prisoners of war and alien armed forces stationed within country.
[164] European population only.
[165] Married population excludes persons consensually married. Such consensual unions numbered 5 656 (1 949 males, 3 707 females) in 1951.

[6] La population mariée comprend un nombre inconnu de personnes séparées de leur conjoint.
[25] Pour le nombre des personnes séparées de leur conjoint et comprises dans la population mariée, voir *Annuaire démographique* 1949/50, 1954, 1955 ou 1958.
[36] 16 ans et plus.
[49] 16-24 ans.
[161] 19 ans et plus.
[162] 19-24 ans.
[163] Non compris les militaires hors du pays (2 182 au recensement de 1956), les prisonniers de guerre et les militaires étrangers en garnison dans le pays.
[164] Population européenne seulement.
[165] Les personnes vivant en état d'union consensuelle ne sont pas comprises parmi la population mariée. Il y avait 5 656 personnes dans cette situation en 1951 (1 949 hommes et 3 707 femmes).

11. Illiterate and total population 15 years of age and over by sex — Population illettrée et population totale de 15 ans et plus, selon le sexe : 1920–1960

[Illiteracy is defined as inability either to read or to write, hence semi-literates are included with illiterate population. (E) indicates an estimate of population, otherwise data refer to censuses. Percentages are the illiterate population of specified age group per 100 total population of corresponding age group. For discussion, see page 35. — Par illettré, on entend toute personne qui est incapable de lire *ou* d'écrire, en conséquence les semi-illettrés, c.à.d. ceux qui savent seulement lire *ou* écrire, sont classés avec les illettrés. (E) indique qu'il s'agit d'une estimation, sinon les chiffres proviennent de données de recensement. Les pourcentages indiquent la proportion des illettrés par rapport à l'effectif total d'un groupe d'âge particulier. Voir explications à la page 85.]

[1] Excluding personnel in military establishments.
[2] *De jure* population actually enumerated but excluding persons in institutions (42 917), military personnel in barracks (53 374), merchant seamen (872), armed forces and diplomatic personnel stationed outside country, and some Moslem workers in France.
[3] Data are for population of all ages.
[4] Illiteracy defined as inability either to read or to write Portuguese.
[5] Illiterate population excludes semi-literate persons.
[6] Illiteracy defined as inability either to read or to write Sesuto.
[7] Illiteracy defined as inability both to read and write native language.
[8] Illiterate population excludes semi-literate persons, numbering 5 395 in 1946; includes persons of unknown literacy status.
[9] Data are for population 7 years of age and over.
[10] Illiterate population excludes semi-literate persons, numbering 687 (443 males, 244 females) in 1950.
[11] Excluding alien armed forces stationed in the area.

[1] Non compris les militaires dans les établissements militaires.
[2] Population de droit effectivement dénombrée, mais non compris les personnes vivant dans des institutions (42 917), les militaires dans les casernes (53 374), les marins de commerce (872), les militaires et le personnel diplomatique en poste hors du pays, ainsi que certains travailleurs musulmans en France.
[3] Population de tous âges.
[4] Analphabétisme défini comme inaptitude à lire ou à écrire le portugais.
[5] Les semi-illettrés ne sont pas compris parmi les illettrés.
[6] Analphabétisme défini comme inaptitude à lire ou à écrire le sesuto.
[7] Analphabétisme défini comme inaptitude à lire et à écrire une ou plusieurs langues indigènes.
[8] La population illettrée ne comprend pas les semi-illettrés (5 395 en 1946), mais comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[9] Population âgée de 7 ans et plus.
[10] La population illettrée ne comprend pas les semi-illettrés (687 en 1950, dont 443 du sexe masculin et 244 du sexe féminin).
[11] Non compris les militaires étrangers en garnison sur le territoire.

11. Illiterate and total population 15 years of age and over by sex (continued) — Population illettrée et population totale de 15 ans et plus, selon le sexe (suite)

[3] Data are for population of all ages.
[4] Illiteracy defined as inability either to read or to write Portuguese.
[5] Illiterate population excludes semi-literate persons.
[12] Data are for population 14 years of age and over.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[14] Illiteracy defined as inability both to read and write Malagasy. Illiterate population excludes semi-literate persons reported as 7.3 per cent for both sexes, 7.7 for males and 6.9 for females.
[15] Data based on sample survey.
[16] Including data for dependency of Rodrigues.
[17] Data are for population 10 years of age and over.
[18] Illiteracy defined as inability either to read or to write English.
[19] Excluding 215 European military personnel and 56 crew members and passengers on ships in harbours.
[20] Illiterate population excludes semi-literate persons, numbering 1 726 (1 376 males, 350 females) in 1950.
[21] Including data for British Cameroons.
[22] Includes large number of persons of unknown literacy status. Illiteracy defined as inability both to read and write English, other Roman script, or Arabic script.
[23] Illiterate population includes persons of unknown literacy status.
[24] Includes large number of persons of unknown literacy status. Illiteracy defined as inability both to read and write English or a vernacular language.
[25] Data for illiterate population are persons 16 years of age and over but percentages computed on population 15 years and over.

[3] Population de tous âges.
[4] Analphabétisme défini comme inaptitude à lire ou à écrire le portugais.
[5] Les semi-illettrés ne sont pas compris parmi les illettrés.
[12] Population âgée de 14 ans et plus.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.
[14] Analphabétisme défini comme inaptitude à lire et à écrire le malgache. La population illettrée ne comprend pas les semi-illettrés qui représenteraient 7,3 pour cent pour les deux sexes (7,7 pour cent pour le sexe masculin et 6,9 pour le sexe féminin).
[15] D'après une enquête par sondage.
[16] Y compris la dépendance de Rodrigues.
[17] Population âgée de 10 ans et plus.
[18] Analphabétisme défini comme inaptitude à lire ou à écrire l'anglais.
[19] Non compris 215 militaires européens et 56 membres d'équipage et passagers de bateaux dans les ports.
[20] La population illettrée ne comprend pas les semi-illettrés (1 726 en 1950, dont 1 376 du sexe masculin et 350 du sexe féminin).
[21] Y compris le Cameroun britannique.
[22] Y compris un grand nombre de personnes dont l'aptitude à lire et à écrire est inconnue. Analphabétisme défini comme inaptitude à lire et à écrire l'anglais, ou d'autres langues s'écrivant en caractères romains ou arabes.
[23] La population illettrée comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[24] Y compris un grand nombre de personnes dont l'aptitude à lire et à écrire est inconnue. Analphabétisme défini comme inaptitude à lire et à écrire l'anglais ou une langue vernaculaire.
[25] Les chiffres absolus de la population illettrée se rapportent aux personnes âgées de 16 ans et plus, mais les pourcentages sont calculés sur la base de la population âgée de 15 ans et plus.

[3] Data are for population of all ages.
[9] Data are for population 7 years of age and over.
[12] Data are for population 14 years of age and over.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[17] Data are for population 10 years of age and over.
[31] Excluding tourists and members of UK and US armed forces and their dependants stationed in the area.
[32] *De jure* population.
[33] Excluding Newfoundland.
[34] Data are for population 11 years of age and over.
[35] Excludes persons of unknown age, not tabulated by literacy.
[36] *De jure* population, but including armed forces stationed in the area.
[37] Data are for population 9 years of age and over.
[38] Illiteracy defined as inability to read.
[39] Excluding 2 700 persons (1 556 males, 1 144 females) of unknown age, not tabulated by literacy.

[3] Population de tous âges.
[9] Population âgée de 7 ans et plus.
[12] Population âgée de 14 ans et plus.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.
[17] Population âgée de 10 ans et plus.
[31] Non compris les touristes et les militaires américains et britanniques en garnison sur le territoire, ainsi que les personnes à leur charge les accompagnant.
[32] Population de droit.
[33] Non compris Terre-Neuve.
[34] Population âgée de 11 ans et plus.
[35] Non compris les personnes d'âge inconnu, non classées selon l'aptitude à lire et à écrire.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[37] Population âgée de 9 ans et plus.
[38] Analphabétisme défini comme inaptitude à lire.
[39] Non compris 2 700 personnes d'âge inconnu (1 556 du sexe masculin et 1 144 du sexe féminin) qui n'ont pas été classées selon l'aptitude à lire et à écrire.

[3] Data are for population of all ages.
[9] Data are for population 7 years of age and over.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[17] Data are for population 10 years of age and over.
[23] Illiterate population includes persons of unknown literacy status.
[32] *De jure* population.
[36] *De jure* population, but including armed forces stationed in the area.
[38] Illiteracy defined as inability to read.
[40] Population held to be overstated by approximately 1 000 000.
[41] *De jure* population, but excluding 84 diplomatic personnel outside country.
[42] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 4.3 per cent.
[43] Data are for population 6 years of age and over.
[44] Excluding data for Canal Zone, shown separately above. For 1940 and 1950, excluding Indian jungle population, numbering 55 987 in 1940, and 48 654 in 1950.
[45] Reason for slight discrepancy between figures shown here and corresponding figures shown elsewhere is errors in data processing.

[3] Population de tous âges.
[9] Population âgée de 7 ans et plus.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.
[17] Population âgée de 10 ans et plus.
[23] La population illettrée comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[32] Population de droit.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[38] Analphabétisme défini comme inaptitude à lire.
[40] Le chiffre de la population est considéré comme supérieur de 1 000 000 environ à la réalité pour les deux sexes.
[41] Population de droit, mais non compris 84 membres du personnel diplomatique en poste hors du pays.
[42] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement pour sous-dénombrement estimé à 4,3 pour cent.
[43] Population âgée de 6 ans et plus.
[44] Non compris la Zone du Canal indiquée séparément ci-dessus. Pour 1940 et 1950, non compris les Indiens de la jungle (55 987 en 1940 et 48 654 en 1950).
[45] Le léger écart qui existe entre les chiffres donnés ici et les chiffres correspondants qui figurent ailleurs est dû à des erreurs d'exploitation.

[3] Data are for population of all ages.
[5] Illiterate population excludes semi-literate persons.
[17] Data are for population 10 years of age and over.
[36] *De jure* population, but including armed forces stationed in the area.
[46] Excluding Alaska and Hawaii. Prior to 1952, *de jure* population, but excluding armed forces overseas, estimated at 435 000 in 1950.
[47] Beginning 1940, data are for population 14 years of age and over.
[48] Estimated.
[49] Because of rounding, totals in all cases are not the sum of the parts.
[50] Data based on a sample survey and relate to the civilian population excluding inmates of institutions. Literacy question was asked only of persons who completed less than 5 years of school in 1947 and less than 6 years of school in 1952 and 1959.
[51] Data based on a 20 per cent sample of census returns.
[52] Data based on a sample survey covering approximately 20 per cent of households.

[3] Population de tous âges.
[5] Les semi-illettrés ne sont pas compris parmi les illettrés.
[17] Population âgée de 10 ans et plus.
[36] Population de droit, mais y compris les militaires en garnison sur le territoire.
[46] Non compris l'Alaska et Hawaii. Avant 1952, population de droit, mais non compris les militaires à l'étranger, estimés à 435 000 en 1950.
[47] A partir de 1940, population âgée de 14 ans et plus.
[48] Estimation.
[49] Les chiffres ayant été arrondis, les totaux ne correspondent pas dans tous les cas à la somme des éléments.
[50] Données tirées d'une enquête par sondage et se rapportant à la population civile, non compris les pensionnaires d'institutions. Seules les personnes comptant moins de 5 ans de scolarité en 1947 et moins de 6 ans en 1952 et en 1959 ont été interrogées sur leur aptitude à lire et à écrire.
[51] D'après un échantillon de 20 pour cent des bulletins de recensement.
[52] D'après une enquête par sondage ayant porté sur 20 pour cent environ des ménages.

11. Illiterate and total population 15 years of age and over by sex (continued) — Population illettrée et population totale de 15 ans et plus, selon le sexe (suite)

[3] Data are for population of all ages.
[5] Illiterate population excludes semi-literate persons.
[12] Data are for population 14 years of age and over.
[17] Data are for population 10 years of age and over.
[52] Data based on a sample survey covering approximately 20 per cent of households.
[53] Excluding persons of unknown age, not tabulated by literacy, numbering 419 (184 males, 235 females) in 1921, 341 (172 males, 169 females) in 1943 and 1 312 (426 males, 886 females) in 1953.
[54] Data based on a demographic sample survey covering approximately 5 per cent of households in Kingston Metropolitan Area and 10 per cent of households in rural areas.
[55] Excludes semi-literate persons who were able to read only, numbering 12 600 in 1921 and 11 158 in 1931 for both sexes.
[56] Illiterate population excludes semi-literate persons who were able to read only.
[57] Excluding 8 persons (4 males, 4 females) of unknown age, not tabulated by literacy.
[58] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.

[3] Population de tous âges.
[5] Les semi-illettrés ne sont pas compris parmi les illettrés.
[12] Population âgée de 14 ans et plus.
[17] Population âgée de 10 ans et plus.
[52] D'après une enquête par sondage ayant porté sur 20 pour cent environ des ménages.
[53] Non compris les personnes d'âge inconnu, non classées selon l'aptitude à lire et à écrire, soit 419 (184 du sexe masculin et 235 du sexe féminin) en 1921, 341 (172 du sexe masculin et 169 du sexe féminin) en 1943 et 1 312 (426 du sexe masculin et 886 du sexe féminin) en 1953.
[54] D'après une enquête démographique par sondage ayant porté sur environ 5 pour cent des ménages de la zone métropolitaine de Kingston et 10 pour cent des ménages des régions rurales.
[55] La population illettrée ne comprend pas les semi-illettrés qui pouvaient seulement lire (12 600 en 1921 et 11 158 en 1931 pour les deux sexes).
[56] La population illettrée ne comprend pas les semi-illettrés qui pouvaient seulement lire.
[57] Non compris 8 personnes (4 du sexe masculin et 4 du sexe féminin) d'âge inconnu, qui n'ont pas été classées selon leur aptitude à lire et à écrire.
[58] Population de droit effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement de 1 pour cent pour sous-dénombrement.

11. Illiterate and total population 15 years of age and over by sex (continued) — Population illettrée et population totale de 15 ans et plus, selon le sexe (suite)

* Provisional.
[3] Data are for population of all ages.
[12] Data are for population 14 years of age and over.
[23] Illiterate population includes persons of unknown literacy status.
[28] Data are for population 5 years of age and over.
[59] Population actually enumerated, i.e., excluding 8.4 per cent (227 866) adjustment for underenumeration and estimate of 87 000 for tribal Indian population.
[60] Excluding Indian jungle population, numbering 45 249 in 1950, and schedules not tabulated by age, sex and literacy, numbering 16 713 in 1940 and 31 960 in 1950.
[61] Data believed to be overstated.
[62] Excluding Amerindians of remote districts, numbering 9 700 in 1921, 7 379 in 1931 and 6 023 in 1946.
[63] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 2.5 per cent in 1920, 2.4 per cent in 1930, 1.4 per cent in 1940 and 5.8 per cent in 1952.
[64] Including territory ceded to Peru in 1930.
[65] Excluding adjustment for underenumeration, estimated at 191 683, and indigenous population numbering 127 980.
[66] Data based on census of school population, marriage certificates and identity cards.
[67] *De jure* population, but excluding Indian jungle population.
[68] Excluding schedules not tabulated by age, sex and literacy, numbering 1 321.
[69] Population actually enumerated but excluding 12 881 schedules not tabulated by age, sex and literacy. Also excluding Indian jungle population numbering 17 000 and adjustment for underenumeration estimated at 50 067.

* Provisoire.
[3] Population de tous âges.
[12] Population âgée de 14 ans et plus.
[23] La population illettrée comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[28] Population âgée de 5 ans et plus.
[59] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement de 8,4 pour cent (227 866) pour sous-dénombrement et de 87 000 (estimation) Indiens vivant en tribus.
[60] Non compris les Indiens de la jungle (45 249 en 1950) et les bulletins non classés selon l'âge, le sexe et l'aptitude à lire et à écrire (16 713 en 1940 et 31 960 en 1950).
[61] Chiffres vraisemblablement exagérés.
[62] Non compris les Amérindiens vivant dans les régions reculées (9 700 en 1921, 7 379 en 1931 et 6 023 en 1946).
[63] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,5 pour cent en 1920, 2,4 pour cent en 1930, 1,4 pour cent en 1940 et 5,8 pour cent en 1952.
[64] Y compris les territoires cédés au Pérou en 1930.
[65] Compte non tenu d'un ajustement pour sous-dénombrement estimé à 191 683 et non compris 127 980 indigènes.
[66] D'après un recensement de la population scolaire, les certificats de mariage et les cartes d'identité.
[67] Population de droit, mais non compris les Indiens de la jungle.
[68] Non compris 1 321 bulletins non classés selon l'âge, le sexe et l'aptitude à lire et à écrire.
[69] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés selon l'âge, le sexe et l'aptitude à lire et à écrire. Non compris également 17 000 Indiens de la jungle et compte non tenu d'un ajustement pour sous-dénombrement estimé à 50 067.

* Provisional.
[3] Data are for population of all ages.
[23] Illiterate population includes persons of unknown literacy status.
[28] Data are for population 5 years of age and over.
[70] Population actually enumerated, i.e., excluding an adjustment of 465 144 for underenumeration and 350 000 for Indian jungle population.
[71] Excluding Indian jungle population, numbering 136 147 in 1926, 103 492 in 1936, 100 600 in 1941 and 56 705 in 1950.
[72] Included with data for India.
[73] Excluding military personnel and data for port and Perim.
[74] Data are for population 16 years of age and over.
[75] Excluding European population and nomadic aborigines.
[76] *De jure* population in 252 towns only, approximating the urban area of the Union. Slight discrepancy between total population 15 years of age and over shown here and that shown in Table 5 due to sample.
[77] Population in 2 131 village tracts.
[78] Data estimated from results of a demographic sample survey in 3 460 villages, supplemented by administrative reports. Slight discrepancy between total population 15 years of age and over shown here and that shown in Table 5 due to sample.
[79] Excluding non-resident military and shipping personnel together numbering 36 606 in 1946 census.
[80] Population actually enumerated, excluding adjustment for underenumeration estimated at 0.7 per cent.

* Provisoire.
[3] Population de tous âges.
[23] La population illettrée comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[28] Population âgée de 5 ans et plus.
[70] Population effectivement dénombrée, c'est-à-dire compte non tenu d'un ajustement de 465 144 pour sous-dénombrement et d'un ajustement de 350 000 pour les Indiens de la jungle.
[71] Non compris les Indiens de la jungle (136 147 en 1926, 103 492 en 1936, 100 600 en 1941 et 56 705 en 1950).
[72] Compris dans les chiffres de l'Inde.
[73] Non compris les militaires et compte non tenu du port et de Périm.
[74] Population âgée de 16 ans et plus.
[75] Non compris les Européens et les nomades aborigènes.
[76] Population de droit de 252 villes seulement, correspondant approximativement aux zones urbaines de l'Union. Le léger écart entre le chiffre de la population totale âgée de 15 ans et plus donné ici et celui qui figure au tableau 5 est dû aux méthodes de sondage.
[77] Population de 2 131 villages.
[78] Estimation établie d'après les résultats d'une enquête démographique par sondage effectuée dans 3 460 villages, et complétée au moyen de rapports administratifs. Le léger écart entre le chiffre de la population totale âgée de 15 ans et plus donné ici et celui qui figure au tableau 5 est dû aux méthodes de sondage.
[79] Non compris les militaires et les agents des compagnies maritimes non résidents, soit 36 606 personnes au recensement de 1946.
[80] Population effectivement dénombrée, compte non tenu d'un ajustement pour sous-dénombrement estimé à 0,7 pour cent.

[3] Data are for population of all ages.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[17] Data are for population 10 years of age and over.
[23] Illiterate population includes persons of unknown literacy status.
[43] Data are for population 6 years of age and over.
[81] For Taiwanese nationals only.
[82] Illiteracy defined as inability both to read and write Japanese.
[83] Excluding armed forces and foreigners.
[84] *De jure* population. Excluding data for Quemoy and Matsu Islands.
[85] Data are for population 12 years of age and over.
[86] Former British dependency; declared independent 16 August 1960. Data exclude persons in special internment camps, numbering 7 482 in 1946.
[87] Excluding military personnel in camps, but including 385 military personnel in billets.
[88] Excluding transients afloat and Japanese prisoners of war.
[89] Excluding European population, nomadic aborigines and non-locally domiciled military and civilian services personnel.
[90] Excluding armed forces.
[91] Data are for area of prepartition India enumerated at 1921 census but excluding data for Burma. Also excluding persons not enumerated by literacy, numbering 2 844 156 for all ages (1 508 972 males, 1 335 184 females), of which 952 in Andaman and Nicobar Islands, 60 991 in Kashmir and 2 782 213 in North West Frontier Provinces.
[92] Data are for area of prepartition India enumerated at 1931 census but excluding data for Burma, the Agencies, the tribal areas in the North West Frontier Provinces and persons not enumerated by literacy, together numbering 16 968 189 for all ages.
[93] Excluding Kashmir-Jammu, the final status of which has not yet been determined, the Part "B" tribal areas of Assam, where census could not be taken, settlements of Karikal, Mahé, Pondichéry and Yanaon, which did not become part of India until 1 November 1954, and 268 602 schedules destroyed by fire.
[94] Note suppressed.

* Provisoire.
[3] Population de tous âges.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.

[23] La population illettrée comprend les personnes dont l'aptitude à lire et à écrire est inconnue.
[43] Population âgée de 6 ans et plus.
[81] Nationaux taïwanais seulement.
[82] Analphabétisme défini comme inaptitude à lire et à écrire le japonais.
[83] Non compris les militaires et les étrangers.
[84] Population de droit. Non compris les îles de Quemoy et Matsu.
[85] Population âgée de 12 ans et plus.
[86] Ancienne possession britannique; proclamée indépendante le 16 août 1960. Non compris les personnes se trouvant dans des camps d'internement spéciaux (7 482 en 1946).
[87] Non compris les militaires dans les cantonnements, mais y compris 385 militaires logeant chez l'habitant.
[88] Non compris les personnes de passage à bord de bateaux et les prisonniers de guerre japonais.
[89] Non compris les Européens, les nomades aborigènes et les militaires et les fonctionnaires civils domiciliés ailleurs.
[90] Non compris les militaires.
[91] Les données se rapportent à l'Inde avant le partage : territoire recensé en 1921, mais non compris la Birmanie. Non compris également les personnes non classées selon l'aptitude à lire et à écrire, soit 2 844 156 (1 508 972 du sexe masculin et 1 335 184 du sexe féminin), dont 952 dans les îles Andaman et Nicobar, 60 991 au Cachemire et 2 782 213 dans les provinces de la frontière du Nord-Ouest.
[92] Les données se rapportent à l'Inde avant le partage : territoire recensé en 1931, mais non compris la Birmanie, les *Agencies*, les zones tribales des provinces de la frontière du Nord-Ouest et compte non tenu des personnes non classées selon l'aptitude à lire et à écrire, soit au total 16 968 189.
[93] Non compris le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé, les zones tribales (Partie B) de l'Assam où le recensement n'a pu avoir lieu, les établissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954, et 268 802 bulletins détruits par un incendie.
[94] Note supprimée.

[43] Population âgée de 6 ans et plus.
[111] Non compris 18 782 bulletins non classés selon l'aptitude à lire et à écrire. La population illettrée ne comprend pas les semi-illettrés.
[112] Non compris Hataï, cédé par la Syrie le 23 juin 1939, ni 71 304 personnes d'âge inconnu (35 497 du sexe masculin et 35 807 du sexe féminin).
[113] Population âgée de 9 ans et plus; pourcentages non calculés par le Bureau de Statistique des Nations Unies.
[114] Non compris Eupen et Malmedy cédés par l'Allemagne en 1925.
[115] Pour les années antérieures à 1946, non compris la Dobroudja méridionale cédée par la Roumanie en 1940.
[116] Territoire d'avant la deuxième guerre mondiale, c'est-à-dire y compris la Subcarpathie et une partie de la Slovaquie cédées à l'URSS en 1947.
[117] Population âgée de 10 ans et plus, à l'exclusion des personnes d'âge inconnu.
[118] Nationaux finlandais en Finlande, mais non compris les personnes absentes de leur paroisse d'enregistrement à l'époque du recensement.
[119] Non compris les communes de Tende et de Brigue cédées par l'Italie en 1947 (2 848 habitants au recensement de 1954).
[120] Non compris 663 000 (estimation) prisonniers de guerre ennemis.

11. Illiterate and total population 15 years of age and over by sex (continued) — Population illettrée et population totale de 15 ans et plus, selon le sexe (suite)

[5] Illiterate population excludes semi-literate persons.
[12] Data are for population 14 years of age and over.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[18] Illiteracy defined as inability either to read or to write English.
[28] Data are for population 5 years of age and over.
[32] *De jure* population.
[43] Data are for population 6 years of age and over.
[117] For population 10 years of age and over, excluding unknown age.
[121] Civilian population, excluding dependants of armed forces stationed in the area and persons accommodated in habour shipping, numbering 1 123 and 208, respectively, in 1931 and 1 439 and 479, respectively, in 1951.
[122] Excluding Dodecanese Islands.
[123] Including armed forces stationed outside country, but excluding alien armed forces stationed in the area.
[124] Including Bratislava Bridgehead, ceded to Czechoslovakia in 1947, with a population numbering 3 210 in 1941.
[125] Excluding persons of unknown age.
[126] Territory of 1921.
[127] Including former Free Territory of Trieste and territories ceded to France and Greece in 1947.
[128] Excluding non-Maltese armed forces stationed in the area and non-Maltese crews of ships in harbour.
[129] Territory of 1923-1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany. Also excluding 191 473 soldiers in barracks.
[130] Data for illiterate population based on sample tabulation of census returns.

[5] Les semi-illettrés ne sont pas compris parmi les illettrés.
[12] Population âgée de 14 ans et plus.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.
[18] Analphabétisme défini comme inaptitude à lire ou à écrire l'anglais.
[28] Population âgée de 5 ans et plus.
[32] Population de droit.
[43] Population âgée de 6 ans et plus.
[117] Population âgée de 10 ans et plus, à l'exclusion des personnes d'âge inconnu.
[121] Population civile, non compris les personnes à la charge des militaires en garnison sur le territoire, ni les personnes logeant à bord de bateaux dans le port, soit 1 123 et 208 respectivement en 1931 et 1 439 et 479 respectivement en 1951.
[122] Non compris le Dodécanèse.
[123] Y compris les militaires en garnison hors du pays, mais non compris les militaires étrangers en garnison sur le territoire.
[124] Y compris la tête de pont de Bratislava, cédée à la Tchécoslovaquie en 1947 (3 210 habitants en 1941).
[125] Non compris les personnes d'âge inconnu.
[126] Territoire de 1921.
[127] Y compris l'ancien territoire libre de Trieste et les territoires cédés à la France et à la Grèce en 1947.
[128] Non compris les militaires non maltais, en garnison sur le territoire ni les équipages non maltais de bateaux dans le port.
[129] Territoire de 1923-1937, c'est-à-dire y compris les territoires cédés à l'URSS après la deuxième guerre mondiale, mais non compris Dantzig et les territoires qui faisaient précédemment partie de l'Allemagne. Compte non tenu de 191 473 soldats se trouvant dans des casernes.
[130] Les chiffres de la population sont fondés sur une exploitation par sondage des bulletins de recensement.

* Provisional.
[3] Data are for population of all ages.
[7] Illiteracy defined as inability both to read and write native language.
[9] Data are for population 7 years of age and over.
[13] Data as published by United Nations Educational, Scientific and Cultural Organization. Total populations may differ from those shown elsewhere.
[17] Data are for population 10 years of age and over.
[28] Data are for population 5 years of age and over.
[32] *De jure* population.
[74] Data are for population 16 years of age and over.
[131] Territory prior to Balkan Wars, i.e., excluding Banat and Transylvania. Excluding 74 147 schedules not tabulated by literacy and sex.
[132] Data are for population 13 years of age and over.
[133] For 1931, excluding territory ceded by Italy in 1947. For 1948-1953, *de jure* population excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in 1954.
[134] Including armed forces stationed in the area.
[135] Excluding full-blooded aborigines.
[136] Excluding schedules not tabulated by literacy.
[137] Illiteracy defined as inability to write English or the native language.
[138] Excludes 1 209 schedules not tabulated by sex.

* Provisoire.
[3] Population de tous âges.
[7] Analphabétisme défini comme inaptitude à lire et à écrire une ou plusieurs langues indigènes.
[9] Population âgée de 7 ans et plus.
[13] Chiffres publiés par l'Organisation des Nations Unies pour l'éducation, la science et la culture. Les totaux peuvent différer de ceux qui sont donnés ailleurs.
[17] Population âgée de 10 ans et plus.
[28] Population âgée de 5 ans et plus.
[32] Population de droit.
[74] Population âgée de 16 ans et plus.
[131] Territoire d'avant les guerres balkaniques, c'est-à-dire non compris le Banat et la Transylvanie. Compte non tenu de 74 147 bulletins non classés selon le sexe et l'aptitude à lire et à écrire.
[132] Population âgée de 13 ans et plus.
[133] Pour 1931, non compris les territoires cédés par l'Italie en 1947. Pour 1948-1953, population de droit, non compris Koper et Buje, c'est-à-dire la partie de l'ancien territoire libre de Trieste qui a été rattachée à la Yougoslavie en 1954 et dont la population était estimée à 54 876 en 1953.
[134] Y compris les militaires en garnison sur le territoire.
[135] Non compris les aborigènes de race pure.
[136] Non compris les bulletins non classés selon l'aptitude à lire et à écrire.
[137] Analphabétisme défini comme inaptitude à écrire l'anglais ou la langue indigène.
[138] Non compris 1 209 bulletins non classés par sexe.

Non-indigenous population — Population non indigène										
30 VII 1951 [7]	...	10 163	5 288	52.0	6 075	4 318	71.1	4 088	970	23.7

[1] Lower age limit (in years) of economically active population tabulations.
[2] Excluding personnel in military establishments.
[3] *De jure* population actually enumerated but excluding persons in institutions (42 917), merchant seamen (872), armed forces and diplomatic personnel stationed outside country, and some Moslem workers in France.
[4] Formerly Cameroons, a United Nations Trust Territory under French administration, declared independent 1 January 1960.
[5] Economically active population excludes persons for whom industry is ill-defined or unknown, not able to be separated from "inactive" population.
[6] Formerly part of French Equatorial Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Central African Republic (formerly Ubangi-Shari), 13 August; Chad, 11 August; Congo (formerly Middle Congo), 15 August; Gabon, 17 August.
[7] Economically active population excludes persons for whom status is ill-defined or unknown, not able to be separated from "inactive" population.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[2] Non compris les militaires dans les établissements militaires.
[3] Population de droit effectivement dénombrée, mais non compris les personnes vivant dans des institutions (42 917), les marins de commerce (872), les militaires et le personnel diplomatique en poste à l'étranger, ainsi que quelques travailleurs musulmans en France.
[4] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[5] La population active ne comprend pas les personnes dont la branche d'activité économique est mal définie ou inconnue, et qui ne peut être distinguée de la population "inactive".
[6] Ce pays, qui faisait précédemment partie de l'ancienne Afrique Equatoriale française, est devenu à la fin de 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : République Centrafricaine (anciennement Oubangui-Chari), le 13 août; Tchad, le 11 août; Congo (anciennement Moyen-Congo), le 15 août; Gabon, le 17 août.
[7] La population active ne comprend pas les personnes dont la situation dans la profession est mal définie ou inconnue, et qui ne peuvent être distinguées de la population "inactive".

* Provisional.

[1] Lower age limit (in years) of economically active population tabulations.

[10] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[11] Economically active population excludes persons for whom both industry and status are ill-defined or unknown, not able to be separated from "inactive" population.

[19] Excludes females not reporting a remunerated occupation. If farm housewives, many of whom are unpaid family workers engaged also in agricultural pursuits, are included, participation rates are overstated; for Mozambique they rise to 58.6 for both sexes and 61.8 for females.

[20] Former British dependency; declared independent 1 October 1960.

[21] Including data for British Cameroons.

[22] Includes 153 863 farm housewives who also perform agricultural duties.

[23] Economically active population refers to Africans in employment only, i.e., "native employees of the European money economy", and excludes natives employed by other natives, workers on own account and all persons in the "native economy".

[24] Data based on demographic sample survey of 30 June 1950.

[25] Minimum age for enumeration purposes was less than that adopted for tabulations.

* Provisoire.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.

[10] Ce pays, qui faisait partie de l'ancienne Afrique Occidentale française, est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[11] La population active ne comprend pas les personnes dont tant la branche d'activité économique que la situation dans la profession sont mal définies ou inconnues, et qui ne peuvent être distinguées de la population "inactive".

[19] Non compris les femmes n'ayant déclaré aucune occupation rémunérée. Si l'on compte également les fermières, dont beaucoup constituent des travailleurs familiaux non rémunérés exerçant une activité agricole, les taux d'activité comportent une erreur par excès; au Mozambique, ils atteignent 58,6 pour les deux sexes et 61,8 pour les femmes.

[20] Ancienne possession britannique, proclamée indépendante le 1er octobre 1960.

[21] Y compris le Cameroun britannique.

[22] Y compris 153 863 fermières qui accomplissent également des travaux agricoles.

[23] La population active se rapporte aux Africains salariés seulement, c.à.d. "salariés indigènes travaillant dans l'économie monétaire européenne", ce qui exclut les indigènes employés par d'autres indigènes, les travailleurs à leur propre compte et toutes les personnes appartenant à "l'économie indigène".

[24] D'après une enquête démographique par sondage effectuée le 30 juin 1950.

[25] L'âge minimum adopté pour le dénombrement a été inférieur à celui qui a été retenu pour le classement.

[1] Lower age limit (in years) of economically active population tabulations.

[10] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.

[11] Economically active population excludes persons for whom both industry and status are ill-defined or unknown, not able to be separated from "inactive" population.

[23] Economically active population refers to Africans in employment only, i.e., "native employees of the European money economy", and excludes natives employed by other natives, workers on own account and all persons in the "native economy".

[25] Minimum age for enumeration purposes was less than that adopted for tabulations.

[26] Data based on sample of indigenous African population surveyed in 1953-1955.

[27] Excluding Coloured (mixed) and native population outside Police Zone, estimated at 183 833 in 1946, and 227 776 in 1951.

[27a] For native and Coloured population, 10 years of age; for European population, 15 years of age.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.

[10] Ce pays, qui faisait partie de l'ancienne Afrique Occidentale française, est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.

[11] La population active ne comprend pas les personnes dont tant la branche d'activité économique que la situation dans la profession sont mal définies ou inconnues, et qui ne peuvent être distinguées de la population "inactive".

[23] La population active se rapporte aux Africains salariés seulement, c.à.d. "salariés indigènes travaillant dans l'économie monétaire européenne", ce qui exclut les indigènes employés par d'autres indigènes, les travailleurs à leur propre compte et toutes les personnes appartenant à "l'économie indigène".

[25] L'âge minimum adopté pour le dénombrement a été inférieur à celui qui a été retenu pour le classement.

[26] D'après un échantillon de la population africaine indigène étudié en 1953-1955.

[27] Non compris les personnes de couleur (métis) et les indigènes vivant en dehors de la zone de police, dont le nombre a été estimé à 183 833 en 1946, et à 227 776 en 1951.

[27a] Pour les indigènes et les personnes de couleur : 10 ans; pour la population européenne : 15 ans.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[28] Data based on sample census of population which covered 1 700 000 persons representing 10 per cent of rural and nomad population and 100 per cent of that in 68 towns. Economically active population refers to persons whose principal occupation was a remunerated activity.
[29] Population actually enumerated, excluding adjustment for underenumeration estimated at 8 per cent for both sexes. Economically active population refers to persons reporting a classifiable remunerated occupation.
[30] Excluding armed forces.
[31] Excluding 5 397 Polish refugees in camps.
[32] Formerly Togoland, a United Nations Trust Territory under French administration, declared independent 27 April 1960.
[33] Excluding Algerian refugees temporarily in the country.
[34] Frequency based on a 5 per cent sample of adult males but per cent computed on total male population.
[35] Excluding 209 persons in transit and 4 020 Polish refugees in camps.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[28] D'après un recensement par sondage de la population, ayant porté sur 1 700 000 personnes, soit 10 pour 100 de la population rurale et de la population nomade et 100 pour 100 de la population de 68 villes. La population active se rapporte aux personnes dont la profession principale est rémunérée.
[29] Population effectivement dénombrée, mais compte non tenu d'un ajustement pour sous-dénombrement estimé à 8 pour 100 pour les deux sexes. La population active se rapporte aux personnes ayant déclaré une profession rémunérée susceptible d'être classée.
[30] Non compris les militaires.
[31] Pour 1948, non compris 5 397 réfugiés polonais vivant dans des camps.
[32] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.
[33] Non compris les réfugiés algériens temporairement dans le pays.
[34] Taux fondé sur un échantillon de 5 pour 100 des adultes du sexe masculin mais extrapolé à la population masculine totale.
[35] Non compris 209 personnes de passage et 4 020 réfugiés polonais vivant dans des camps.

* Provisional.
[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[10] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Mali (formerly Sudanese Republic), 20 June; Mauritania, 28 November; Niger, 3 August; Senegal, 20 June; Upper Volta, 5 August.
[11] Economically active population excludes persons for whom both industry and status are ill-defined or unknown, not able to be separated from "inactive" population.
[18] Data for economically active population are based on a sample survey.
[19] Excludes females not reporting a remunerated occupation. If farm housewives, many of whom are unpaid family workers engaged also in agricultural pursuits, are included, participation rates are overstated; for Mozambique they rise to 58.6 for both sexes and 61.8 for females.
[36] Excluding data for Walvis Bay, which is an integral part of the Union but is administered as if it were part of South West Africa (population 3 329 in 1951). Including armed forces outside country and excluding enemy prisoners of war within country.
[37] Including Asiatic and Coloured but excluding Bantu population.
[38] For Asiatic and Coloured population, 15 years of age; for Bantu population, 10 years of age.
[39] White population only.
[40] Excluding nomad population, numbering 55 073, enemy prisoners of war and alien armed forces within country.
[41] Data based on pre-censal house listing.
[42] Includes unpaid family workers, numbering 1 200 000.
[43] Excluding persons in transit and Polish refugees in camps.

* Provisoire.
[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[10] Ce pays, qui faisait partie de l'ancienne Afrique Occidentale française, est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Dahomey, le 1er août; Côte d'Ivoire, le 7 août; Mali (anciennement République soudanaise), le 20 juin; Mauritanie, le 28 novembre; Niger, le 3 août; Sénégal, le 20 juin; Haute-Volta, le 5 août.
[11] La population active ne comprend pas les personnes dont tant la branche d'activité économique que la situation dans la profession sont mal définies ou inconnues, et qui ne peuvent être distinguées de la population "inactive".
[18] Les chiffres relatifs à la population active proviennent d'un sondage.
[19] Non compris les femmes n'ayant déclaré aucune occupation rémunérée. Si l'on compte également les fermières, dont beaucoup constituent des travailleurs familiaux non rémunérés exerçant une activité agricole, les taux d'activité comportent une erreur par excès; au Mozambique, ils atteignent 58,6 pour les deux sexes et 61,8 pour les femmes.
[36] Non compris Walvis Bay (3 329 habitants en 1951), qui fait partie intégrante de l'Union sud-africaine mais qui est administrée comme si elle relevait du Sud-Ouest africain. Y compris les militaires à l'étranger, mais non compris les prisonniers de guerre ennemis dans le pays.
[37] Y compris la population d'origine asiatique et la population de couleur, mais non compris la population bantoue.
[38] Pour la population d'origine asiatique et la population de couleur : 15 ans; pour la population bantoue : 14 ans.
[39] Population blanche seulement.
[40] Non compris les nomades (55 073), les prisonniers de guerre ennemis et les militaires étrangers dans le pays.
[41] Données provenant d'un relevé des logements antérieur au recensement.
[42] Y compris 1 200 000 travailleurs familiaux non rémunérés.
[43] Non compris les personnes de passage et les réfugiés polonais vivant dans des camps.

[1] Lower age limit (in years) of economically active population tabulations.
[17] *De jure* population.
[44] Excludes persons seeking work for first time, apprentices and learners, and unpaid family workers, for all of whom classification by sex is not available. The excluded groups number 103, 48 and 12, respectively, for both sexes.
[45] Economically active population excludes persons seeking work for first time and includes persons in institutions.
[46] Excluding Yukon and Northwest Territories, and prior to 1950, Newfoundland. Economically active population estimates exclude members of the armed services and Indians living on reserves, numbering 71 240 and 62 458, respectively, in 1951.
[47] Minimum age for enumeration was 10 years.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[17] Population de droit.
[44] Non compris les personnes cherchant du travail pour la première fois, ainsi que les apprentis et les travailleurs familiaux non rémunérés pour lesquels il n'existe pas de classement par sexe, soit respectivement 103, 48 et 12 pour les deux sexes.
[45] La population active ne comprend pas les personnes cherchant du travail pour la première fois, mais y compris les personnes vivant des institutions.
[46] Non compris le Yukon et les Territoires du Nord-Ouest et, pour les années antérieures à 1950, Terre-Neuve. Compte non tenu dans les estimations de la population active de 71 240 militaires et de 62 458 Indiens vivant dans des réserves en 1951.
[47] La limite d'âge inférieure adoptée pour le dénombrement a été de 10 ans.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[46] Excluding Yukon and Northwest Territories, and prior to 1950, Newfoundland. Economically active population estimates exclude members of the armed services and Indians living on reserves, numbering 71 240 and 62 458, respectively, in 1951.
[48] *De jure* population, but including armed forces stationed in the area.
[49] Economically active population refers to persons reporting an occupation; *oficios domesticos* are considered "inactive".
[50] Economically active population excludes persons who did not report an occupation, not able to be separated from "inactive" population.
[51] Population held to be overstated by approximately 1 000 000 for both sexes.
[52] *De jure* population, but excluding 84 diplomatic personnel outside country.
[53] Economically active population refers to persons reporting an occupation; *oficios domesticos* are considered "inactive". If persons not reporting an occupation are included with economically active, percentages for both sexes, male and female population are 34.7, 58.8 and 10.4, respectively.
[54] Population actually enumerated, excluding adjustment for underenumeration estimated at 4.3 per cent.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[46] Non compris le Yukon et les Territoires du Nord-Ouest et, pour les années antérieures à 1950, Terre-Neuve. Compte non tenu dans les estimations de la population active de 71 240 militaires et de 62 458 Indiens vivant dans des réserves en 1951.
[48] Population de droit, mais y compris les militaires en garnison sur le territoire.
[49] La population active se rapporte aux personnes ayant déclaré une profession; les *oficios domesticos* sont considérés comme "inactifs".
[50] La population active ne comprend pas les personnes qui n'ont pas déclaré de profession et que l'on ne peut distinguer de la population "inactive".
[51] Chiffre considéré comme supérieur d'environ 1 000 000 à la réalité pour les deux sexes.
[52] Population de droit, mais non compris 84 membres du personnel diplomatique en poste hors du pays.
[53] La population active se rapporte aux personnes ayant déclaré une profession; les *oficios domesticos* sont considérés comme "inactifs". Si l'on comptait les personnes sans profession dans la population active, les pourcentages correspondants s'établiraient à 34,7, 58,8, et 10,4.
[54] Population effectivement dénombrée, mais compte non tenu d'un ajustement pour sous-dénombrement estimé à 4,3 pour 100 de la population totale.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[48] *De jure* population, but including armed forces stationed in the area.
[50] Economically active population excludes persons who did not report an occupation, not able to be separated from "inactive" population.
[55] Data include an adjustment for underenumeration which is believed to be too high.
[56] Excluding Canal Zone, shown separately above. Also excluding tribal Indian population, numbering 55 987 in 1940 and 48 654 in 1950.
[57] For 1920 and 1930, data probably include some retired workers, inmates of institutions and recently incapacitated workers, neither working nor seeking work at time of census, and probably exclude for the most part new workers. For 1957-1959, economically active population excludes armed forces.
[58] Excluding Alaska and Hawaii, which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively. Estimates include armed forces overseas.
[59] Economically active population estimates are averages of monthly figures but percentages are computed on 1 July total population estimates. Because of rounding, totals are not in all cases the sum of the parts.
[60] *De jure* population, but excluding armed forces overseas.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[48] Population de droit, mais y compris les militaires en garnison sur le territoire.
[50] La population active ne comprend pas les personnes qui n'ont pas déclaré de profession et que l'on ne peut distinguer de la population "inactive".
[55] Compte tenu d'un ajustement pour sous-dénombrement que l'on croit exagéré.
[56] Non compris la Zone du Canal qui fait l'objet d'une rubrique spéciale; non compris également les Indiens vivant en tribus (55 987 en 1940 et 48 654 en 1950).
[57] Pour 1920 et 1930, les chiffres de la population active comprennent probablement quelques travailleurs retraités, des pensionnaires d'institutions et, plus récemment, des travailleurs frappés d'incapacité qui ne travaillaient pas ou ne cherchaient pas de travail à l'époque du recensement; ils excluent probablement les nouveaux travailleurs dans la plupart des cas; pour 1957-1959, non compris les militaires.
[58] Non compris l'Alaska et Hawaii qui sont devenus les 49ème et 50ème Etats de l'Union le 30 janvier et le 21 août 1959 respectivement. Y compris les militaires à l'étranger.
[59] Les estimations de la population active sont des moyennes de chiffres mensuels, mais les pourcentages sont calculés par rapport aux estimations de la population totale au 1er juillet. Les chiffres ayant été arrondis, les totaux ne correspondent pas dans tous les cas à la somme des composants.
[60] Population de droit, mais non compris les militaires à l'étranger.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[45] Economically active population excludes persons seeking work for first time and includes persons in institutions.
[48] *De jure* population, but including armed forces stationed in the area.
[58] Excluding Alaska and Hawaii, which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively. Estimates include armed forces overseas.
[59] Economically active population estimates are averages of monthly figures but percentages are computed on 1 July total population estimates. Because of rounding, totals are not in all cases the sum of the parts.
[60] *De jure* population, but excluding armed forces overseas.
[61] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 2.5 per cent (3 800 000).

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[45] La population active ne comprend pas les personnes cherchant du travail pour la première fois, mais y compris les personnes vivant des institutions.
[48] Population de droit, mais y compris les militaires en garnison sur le territoire.
[58] Non compris l'Alaska et Hawaii qui sont devenus les 48ème et 50ème Etats de l'Union le 3 janvier et le 21 août 1959 respectivement. Y compris les militaires à l'étranger.
[59] Les estimations de la population active sont des moyennes de chiffres mensuels, mais les pourcentages sont calculés par rapport aux estimations de la population totale au 1er juillet. Les chiffres ayant été arrondis, les totaux ne correspondent pas dans tous les cas à la somme des composants.
[60] Population de droit, mais non compris les militaires à l'étranger.
[61] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,5 pour 100 (3 800 000).

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[45] Economically active population excludes persons seeking work for first time and includes persons in institutions.
[62] Excludes persons seeking work for first time.
[63] Data based on a sample survey covering approximately 20 per cent of households.
[64] Data based on results of a demographic sample survey covering approximately 5 per cent of households in Kingston Metropolitan Area and 10 per cent of households in rural areas.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[45] La population active ne comprend pas les personnes cherchant du travail pour la première fois, mais y compris les personnes vivant des institutions.
[62] Non compris les personnes cherchant du travail pour la première fois.
[63] D'après une enquête par sondage ayant porté sur environ 20 pour 100 des ménages.
[64] D'après une enquête démographique par sondage ayant porté sur 5 pour 100 environ des ménages dans la zone métropolitaine de Kingston et sur 10 pour 100 des ménages dans les zones rurales.

[1] Lower age limit (in years) of economically active population tabulations.
[5] Economically active population excludes persons for whom industry is ill-defined or unknown, not able to be separated from "inactive" population.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[45] Economically active population excludes persons seeking work for first time and includes persons in institutions.
[65] Data estimated by the Industrial Union of Argentina. Total population estimates based on 1947 census are 12 623 190 for 1 July 1933 and 13 724 543 for 1 July 1938.
[66] *De jure* population actually enumerated, i.e., excluding 1 per cent adjustment for underenumeration.
[67] Population actually enumerated, i.e., excluding 8.4 per cent (277 866) adjustment for underenumeration and estimate of 87 000 for tribal Indian population.
[68] Excluding Indian jungle population, numbering 45 249 in 1950.
[69] Data believed to be overstated.
[70] Data exclude schedules not tabulated by sex and economic characteristics, numbering 16 713 in 1940 and 31 960 in 1950.
[71] Economically active population excludes unemployed persons.
[72] Excluding Amerindians of remote districts, numbering 9 700 in 1921, 7 379 in 1931 and 6 023 in 1946.
[73] Population actually enumerated, i.e., excluding adjustment for underenumeration estimated at 2.5 per cent in 1920, 2.4 per cent in 1930, 1.4 per cent in 1940 and 5.8 per cent in 1952.
[74] Including territory ceded to Peru in 1930.
[75] Data exclude 4 775 schedules for indigenous population (2 606 males, 2 169 females) not tabulated by economic characteristics.
[76] Persons engaged in activity for which payment is made directly or indirectly in money or in kind, including those helping the head of the family in a lucrative employment or occupation but excluding members of the family performing the domestic work.
[77] Excluding adjustment for underenumeration, estimated at 191 683, and indigenous population, numbering 127 980.
[78] Includes those unemployed at time of census and unpaid family workers who devoted more than one-third of the year to assisting the head of the family.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[5] La population active ne comprend pas les personnes dont la branche d'activité économique est mal définie ou inconnue, et qui ne peut être distinguée de la population "inactive".
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[45] La population active ne comprend pas les personnes cherchant du travail pour la première fois, mais y compris les personnes vivant des institutions.
[65] Estimation de la *Unión Industrial Argentina*. Estimations de la population totale d'après le recensement de 1947 : 12 623 190 au 1er juillet 1933 et 13 724 543 au 1er juillet 1938.
[66] Population de droit effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 1 pour 100 pour sous-dénombrement.
[67] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement de 8,4 pour 100 (277 866) pour sous-dénombrement et de 87 000 (estimation) Indiens vivant en tribus.
[68] Non compris les Indiens de la jungle (45 249 en 1950).
[69] Chiffre considéré comme exagéré.
[70] Non compris les bulletins non classés selon le sexe et les caractéristiques économiques (16 713 en 1940 et 31 960 en 1950).
[71] Les chômeurs ne sont pas compris dans la population active.
[72] Non compris les Amérindiens habitant des régions reculées (9 700 en 1921, 7 379 en 1931 et 6 023 en 1946).
[73] Population effectivement dénombrée, c.à.d. compte non tenu d'un ajustement pour sous-dénombrement estimé à 2,5 pour 100 en 1920, à 2,4 pour 100 en 1930, à 1,4 pour 100 en 1940 et à 5,8 pour 100 en 1952.
[74] Y compris les territoires cédés au Pérou en 1930.
[75] Non compris 4 775 bulletins pour la population indigène (2 606 du sexe masculin et 2 169 du sexe féminin) non classés selon les caractéristiques économiques.
[76] Personnes exerçant une activité rémunérée, directement ou indirectement, en espèces ou en nature, y compris celles qui aident le chef de la famille à l'exercice d'un emploi ou d'un métier lucratif et non compris les membres de la famille accomplissant des travaux domestiques.
[77] Compte non tenu d'un ajustement pour sous-dénombrement estimé à 191 683 et non compris la population indigène (127 980).
[78] Y compris les chômeurs au moment du recensement et les travailleurs familiaux non rémunérés ayant consacré plus d'un tiers de l'année à aider le chef de la famille.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[71] Economically active population excludes unemployed persons.
[79] Beginning 1950, *de jure* population, but excluding Indian jungle inhabitants.
[80] Note suppressed.
[81] Data exclude schedules not tabulated by sex and economic characteristics, numbering 1 321.
[82] Population actually enumerated, but excluding 12 881 schedules not tabulated by age, sex and economic characteristics. Also excluding Indian jungle population, estimated at 17 000, and an adjustment for underenumeration of 50 067.
[83] Excluding an adjustment for underenumeration and Indian jungle population, estimated at 465 144 and 350 000, respectively, in 1940.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[71] Les chômeurs ne sont pas compris dans la population active.
[79] A partir de 1950, population de droit, mais non compris les Indiens de la jungle.
[80] Note supprimée.
[81] Non compris les bulletins non classés selon le sexe et les caractéristiques économiques (1 321 pour les deux sexes).
[82] Population effectivement dénombrée, mais non compris 12 881 bulletins non classés selon l'âge, le sexe et les caractéristiques économiques. Non compris également 17 000 (estimation) Indiens de la jungle et compte non tenu d'un ajustement de 50 067 pour sous-dénombrement.
[83] Non compris 350 000 (estimation) Indiens de la jungle et compte non tenu d'un ajustement de 465 144 (estimation) pour sous-dénombrement en 1940.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[39] Economically active population excludes unpaid family workers.
[71] Economically active population excludes unemployed persons.
[84] Excluding Indian jungle population, numbering 100 600 in 1941 and 56 705 in 1950.
[85] Includes houseworkers engaged in needlework at home although this did not constitute a usual or permanent occupation.
[86] Including military personnel and data for port. Beginning 1955, excluding data for Perim.
[87] Included with data shown for India.
[88] Data for total population exclude 1 775 schedules for which sex not stated; for economically active population, exclude 2 400 for which not stated whether employed or not and 1 047 for which sex not stated.
[89] Excluding alien armed forces, merchant seamen, and foreign diplomatic personnel, but including civilian aliens.
[90] *De jure* population in 252 towns, approximating the urban area of the Union; these are the results of the first stage of a multi-stage sample census.
[91] *De jure* population in 2 131 village tracts in Burma proper; these are the results of the second stage of a multi-stage sample census.
[92] *De jure* population in the 252 towns covered in the 1953 sample census.
[93] Excluding non-resident military and shipping personnel, together numbering 36 606 in 1946.
[94] Economically active population excludes unpaid family workers and persons seeking work for the first time, includes 284 retired persons and 1 362 persons living from rents, dividends, pensions, etc.
[95] Population actually enumerated; total, including 0.7 per cent adjustment for underenumeration, is 8 154 580 for both sexes.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[39] La population active ne comprend pas les travailleurs familiaux non rémunérés.
[71] Les chômeurs ne sont pas compris dans la population active.
[84] Non compris les Indiens de la jungle (100 600 en 1941 et 56 705 en 1950).
[85] Y compris les ménagères faisant des travaux d'aiguille à domicile bien que cela ne constitue pas une occupation habituelle ou permanente.
[86] Y compris les militaires et compte tenu du port. A partir de 1955, non compris Perim.
[87] Compris dans les chiffres de l'Inde.
[88] Non compris dans la population totale, 1 775 bulletins non classés par sexe; non compris dans la population active 1 047 bulletins non classés selon le sexe et 2 400 non classés selon les caractéristiques économiques.
[89] Non compris les militaires étrangers, les marins de commerce et le personnel diplomatique étranger, mais y compris les civils étrangers.
[90] Population de droit de 252 villes correspondant approximativement aux zones urbaines de l'Union; ces données sont les résultats du premier degré d'un recensement par sondage à plusieurs degrés.
[91] Population de droit de 2 131 villages de Birmanie proprement dite; ces données sont les résultats du deuxième degré d'un recensement par sondage à plusieurs degrés.
[92] Population de droit des 252 villes comprises dans le recensement par sondage de 1953.
[93] Non compris les militaires et agents des compagnies maritimes non résidents, soit 36 606 personnes en 1946.
[94] La population active ne comprend pas les travailleurs familiaux non rémunérés et les personnes qui cherchent du travail pour la première fois; elle comprend 284 retraités et 1 362 rentiers, etc.
[95] Population effectivement dénombrée; le total est de 8 154 580 pour les deux sexes, compte tenu d'un ajustement de 0,7 pour 100 pour sous-dénombrement.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[18] Data for economically active population are based on a sample survey.
[71] Economically active population excludes unemployed persons.
[96] Excluding armed forces and foreigners. Economically active population excludes unpaid family workers and unemployed persons.
[97] Former British dependency; declared independent 16 August 1960. For 1946, including armed forces, but excluding persons in special internment camps; for 1956-1958, excluding persons in military and special internment camps, numbering 4 940 and 7 482, respectively, at 1946 census.
[98] Excluding transients afloat, numbering 822 at 1947 census. For 1947, also excluding non-locally domiciled military and civilian services personnel and their dependants, Japanese prisoners of war, and nomadic aborigines.
[99] Pre-partition India, i.e., including Pakistan, Sikkim, Kashmir-Jammu and, for 1921, Aden Colony, but excluding Burma.
[100] *De jure* population. For Republic of India, but including Sikkim and excluding Kashmir-Jammu, the final status of which has not yet been determined, the Part "B" tribal areas of Assam where census could not be taken, and settlements of Karikal, Mahé, Pondichéry and Yanaon, which did not become part of India until 1 November 1954. Data also exclude 251 082 census schedules destroyed by fire and 1.1 per cent adjustment for net underenumeration.
[101] Including data for Netherlands New Guinea. Data exclude 135 350 schedules for which sex was not reported.
[102] Note suppressed.
[103] Includes nomad population estimated at 250 000 (130 000 males, 120 000 females).

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[18] Les chiffres relatifs à la population active proviennent d'un sondage.
[71] Les chômeurs ne sont pas compris dans la population active.
[96] Non compris les militaires et les étrangers. La population active ne comprend pas les travailleurs familiaux non rémunérés et les chômeurs.
[97] Ancienne possession britannique, proclamée indépendante le 16 août 1960. Pour 1946, y compris les militaires, mais non compris les personnes se trouvant dans des camps d'internement spéciaux; pour 1956-1958, non compris les personnes se trouvant dans des camps militaires et dans des camps d'internement spéciaux (4 940 et 7 482 respectivement au recensement de 1946).
[98] Non compris les personnes de passage à bord des navires (822 au recensement de 1947). Pour 1947, non compris également les militaires et les fonctionnaires civils domiciliés en dehors du territoire et les personnes à leur charge les accompagnant, les prisonniers de guerre japonais et les autochtones nomades.
[99] Inde avant la partage, c.à.d., y compris le Pakistan, le Sikkim, le Cachemire-Jammu, et pour 1921 la Colonie d'Aden, mais non compris la Birmanie.
[100] Population de droit. Pour la République indienne, mais y compris le Sikkim et non compris le Cachemire-Jammu, dont le statut définitif n'a pas encore été déterminé, les zones tribales (Partie B) de l'Assam où le recensement n'a pu avoir lieu, et les établissements de Karikal, Mahé, Pondichéry et Yanaon qui n'ont été rattachés à l'Inde que le 1er novembre 1954; non compris également 251 082 bulletins de recensement détruits pas un incendie. Non compris également 1,1 pour 100 pour sous-dénombrement net.
[101] Y compris la Nouvelle-Guinée néerlandaise. Non compris 135 350 bulletins sur lesquels le sexe n'a pas été déclaré.
[102] Note supprimée.
[103] Y compris 250 000 (estimation) nomades, dont 130 000 du sexe masculin et 120 000 du sexe féminin.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[18] Data for economically active population are based on a sample survey.
[47] Minimum age for enumeration was 10 years.
[104] Beginning 1956, excluding Bedouins in the Negev, estimated at 13 500 in 1956.
[105] Beginning 1951, economically active population excludes persons in compulsory military service; for 1951, also excludes immigrants in camps and new immigrants, estimated at 70 000 for both sexes, and unemployed persons.
[106] Prior to 1946, data adjusted to exclude most of the territory no longer part of Japan, i.e., Korea, Taiwan, Karafuto, Ryukyu Islands, etc. For 1946, 1947 and 1950, data exclude Tokara Archipelago and Amami Islands, not under the administration of Japan after 2 September 1945 but which reverted to Japan on 5 December 1951 and 25 December 1953, respectively. Beginning 1946, excluding Allied military and civilian personnel and their dependants.
[107] Excluding military personnel and, for 1940, foreigners except those from Korea, Taiwan, Karafuto, Ryukyu Islands, etc.
[108] Excluding foreigners and those Koreans, Taiwanese and Ryukyuans who stated that they wished to be repatriated; estimated total population is 74 024 000.
[109] Including adjustment for underenumeration, estimated at 3 109, due to flood conditions at time of census, but not adjusted for underenumeration estimated at 525 527. Population actually enumerated is 78 098 364.
[110] Because of rounding, totals are not in all cases the sum of the parts.
[111] *De jure* population actually enumerated, excluding 0.39 per cent adjustment for underenumeration.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[18] Les chiffres relatifs à la population active proviennent d'un sondage.
[47] La limite d'âge inférieure adoptée pour le dénombrement a été de 10 ans.
[104] A partir de 1956, non compris les Bédouins du Negev, estimés à 13 500 en 1956.
[105] A partir de 1951, la population active ne comprend pas les personnes accomplissant leur service militaire obligatoire; pour 1951, non compris également les immigrants se trouvant dans des camps et les nouveaux immigrants, estimés à 70 000 pour les deux sexes, et les chômeurs.
[106] Pour les années antérieures à 1946, chiffres ajustés pour éliminer la plupart des territoires ne faisant plus partie du Japon, c.à.d. la Corée, Taïwan, Karafuto, les îles Ryu-Kyu, etc. Pour 1946, 1947 et 1950, non compris l'archipel des Tokara et les îles Amami, enlevés à l'administration japonaise le 2 septembre 1945, et qui ont fait retour au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement. A partir de 1946, non compris les militaires et le personnel civil alliés ainsi que les personnes à leur charge les accompagnant.
[107] Non compris les militaires et, pour 1940, les étrangers sauf ceux qui provenaient de Corée, de Taïwan, de Karafuto, des îles Ryu-Kyu, etc.
[108] Non compris les étrangers et les personnes originaires de Corée, de Taïwan et de Ryû-Kyû qui avaient déclaré leur intention de se faire rapatrier. Population totale estimée à 74 024 000.
[109] Compte tenu d'un ajustement pour sous-dénombrement estimé à 3 109 et imputable aux inondations qui ont eu lieu à l'époque du recensement, mais compte non tenu d'un sous-dénombrement estimé à 525 527. Population effectivement dénombrée : 78 098 364.
[110] Les chiffres ayant été arrondis, les totaux ne correspondent pas dans tous les cas à la somme des composants.
[111] Population de droit effectivement dénombrée, compte non tenu d'un ajustement de 0,39 pour 100 pour sous-dénombrement.

* Provisional.
[1] Lower age limit (in years) of economically active population tabulations.
[2] Excluding military personnel in barracks.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[71] Economically active population excludes unemployed persons.
[87] Included with data shown for India.
[110] Because of rounding, totals are not in all cases the sum of the parts.
[112] Excluding foreigners, numbering 21 885 at 1949 census.
[113] Data refer to population in area south of the 38th parallel.
[114] Data exclude schedules for 21 546 persons not tabulated by sex and economic characteristics.
[115] Excluding transients and members of the British armed forces, numbering 1 442 and 66, respectively.
[116] Excluding Kashmir-Jammu, the final status of which has not yet been determined, Gilgit, Baltistan, Junagadh, Manavadar and the port and peninsula of Gwadar acquired from Muscat and Oman on 8 September 1958. Also excluding 1 755 152 estimated population of Frontier Regions of North West, 206 669 foreign nationals and adjustment for underenumeration in urban areas amounting to 5 per cent or 393 166.
[117] Territory formerly under British mandate.
[118] Excluding Bedouin population, numbering 66 553.
[119] Beginning 1956, estimates based on a National Sample Survey of Households.
[120] Includes 1 634 726 farm housewives assumed to be actually engaged in agriculture.

* Provisoire.
[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[2] Non compris les militaires dans les casernes.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[71] Les chômeurs ne sont pas compris dans la population active.
[87] Compris dans les chiffres de l'Inde.
[110] Les chiffres ayant été arrondis, les totaux ne correspondent pas dans tous les cas à la somme des composants.
[112] Non compris les étrangers (21 885 au recensement de 1949).
[113] Population au sud du 38ème parallèle.
[114] Non compris les bulletins de 21 546 personnes non classées selon le sexe et les caractéristiques économiques.
[115] Non compris les personnes de passage et les militaires britanniques (1 442 et 66 respectivement).
[116] Non compris le Cachemire-Jammu dont le statut définitif n'a pas encore été déterminé, ni le Gilgit, le Baltistan, le Junagadh, le Manavadar, ainsi que le port et la péninsule de Gwadar cédés par Mascate et Oman le 8 septembre 1958. Non compris également 1 755 152 (estimation) habitants des régions frontalières du Nord-Ouest, 206 669 étrangers. Compte non tenu d'un ajustement pour sous-dénombrement dans les régions urbaines (5 pour 100 ou 393 166 pour les deux sexes).
[117] Ancien mandat britannique.
[118] Non compris 66 553 Bédouins.
[119] A partir de 1956, estimation fondée sur une enquête nationale par sondage sur les ménages.
[120] Y compris 1 634 726 fermières réputées avoir effectivement accompli des travaux agricoles.

* Provisional.
[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[71] Economically active population excludes unemployed persons.
[121] Excluding Allied military and civilian personnel and their dependants.
[122] Ryukyuan nationals only.
[123] Excluding transients afloat, non-locally domiciled military and civilian services personnel and their dependants, numbering 2 638 and 25 860, respectively, in 1947 and 3 466 and 27 299 in 1957. For 1947, also excluding Japanese prisoners of war, numbering 7 517, but including data for Cocos (Keeling) Islands and Christmas Island, which became External Territories of Australia on 23 November 1955 and 1 October 1958, respectively.
[124] Data based on results of a demographic and economic sample survey covering 2 241 villages and 64 large municipalities. Total is subject to error of ± 1.58 per cent.
[125] Marked increase between 1945 and 1950 and decrease between 1950 and 1955 due to change in procedures. In 1950, all persons aged 7 and over living in rural areas were considered "farmers"; in 1945, children under 10 years of age not declaring an occupation were classified as "inactive."
[126] Excluding Hatay, acquired from Syria 29 June 1939.

* Provisoire.
[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[71] Les chômeurs ne sont pas compris dans la population active.
[121] Non compris les militaires et le personnel civil alliés, ainsi que les personnes à leur charge les accompagnant.
[122] Ressortissants de Ryû-Kyû seulement.
[123] Non compris les personnes de passage à bord de navires, les militaires et fonctionnaires civils domiciliés hors du territoire et les personnes à leur charge les accompagnant (2 638 et 25 860 respectivement en 1947 et 3 466 et 27 299 respectivement en 1957). Pour 1947, non compris également 7 517 prisonniers de guerre japonais, mais y compris la population des îles Cocos (Keeling) et l'île Christmas qui sont devenues des territoires extérieures de l'Australie le 23 novembre 1955 et le 1er octobre respectivement.
[124] D'après les résultats d'une enquête démographique et économique par sondage qui a porté sur 2 241 villages et 64 grandes municipalités; le total comporte une marge d'erreur de ± 1,58 pour 100.
[125] Augmentations marquées entre 1945 et 1950 et diminution entre 1950 et 1955 dues à des changements de méthodes. En 1950, toutes les personnes âgées de 7 ans et plus vivant dans les zones rurales étaient considérées comme des "agriculteurs"; en 1945, les enfants de moins de 10 ans ne déclarant pas d'occupation ont été classés comme "inactifs".
[126] Non compris Hataï cédé par la Syrie le 29 juin 1939.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[127] "Occupied" population.
[128] *De facto* population of territory of 1939.
[129] Published by International Labour Office.
[130] Excluding Southern Dobruja, ceded by Romania in 1940.
[131] For 1930, territory prior to World War II, i.e., including Subcarpathia and a part of Slovakia ceded to USSR in 1947. For 1947, excluding Bratislava Bridgehead, ceded by Hungary in 1947 (population 3 379 in 1941).
[132] Economically active population excludes armed forces and unpaid family workers.
[133] Excluding Faeroe Islands and Greenland, shown separately.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[127] Population "occupée".
[128] Population de fait du territoire de 1939.
[129] Publiées par le Bureau International du Travail.
[130] Non compris la Dobroudja méridionale, cédée par la Roumanie en 1940.
[131] Pour 1930, territoire d'avant la deuxième guerre mondiale, c.à.d. y compris la Subcarpathie et une partie de la Slovaquie cédées à l'URSS en 1947. Pour 1947, non compris la tête de pont de Bratislava, cédée par la Hongrie en 1947 (3 379 habitants en 1941).
[132] La population active ne comprend pas les militaires et les travailleurs familiaux non rémunérés.
[133] Non compris les îles Féroé et le Groenland.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[133] Excluding Faeroe Islands and Greenland, shown separately.
[134] Data based on a 17 per cent sample of census returns.
[135] Finnish nationals only, including those outside country. Including population of small areas ceded to USSR 1944-1947. For 1930, including also Petsamo, the Karelian Isthmus and other small areas ceded to USSR 1940-1944.
[136] Prior to 1954, excluding communes of Tende and Brigue, ceded by Italy in 1947 (population 2 848 at 1954 census). For 1946, excluding an estimated 663 000 prisoners of war. Beginning 1957, including French officials and their families in Germany and Austria and those on compulsory military service overseas.
[137] Data based on a 5 per cent sample of census returns. Marked decrease in percent economically active between 1946 and 1954 due in part to change in procedure whereby only those children and wives of farmers specifically declaring themselves "unpaid family workers" were counted as such, whereas in 1946, such persons were considered as family workers unless otherwise specified.
[138] For 1933, territory of 1934, i.e., excluding Saar. For 1939, territory of 1937, i.e., including Saar. For 1946, British, French, US and USSR zones of occupation.
[139] *De jure* population except in British zone and Bremen in the US zone.
[140] Excludes prisoners of war, civilian internees and refugees in transit camps, numbering 384 323 for Germany, 133 327 for Eastern Germany, 247 240 for Federal Republic of Germany and 3 756 for Berlin.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[133] Non compris les îles Féroé et le Groenland.
[134] D'après un échantillon de 17 pour 100 des bulletins de recensement.
[135] Nationaux finlandais seulement y compris ceux qui se trouvaient à l'étranger. Y compris la population de quelques zones de petite étendue cédées à l'URSS en 1944-1947. Pour 1930, y compris Petsamo, l'isthme de Carélie et quelques autres zones de petite étendue cédées à l'URSS en 1940-1944.
[136] Pour les années antérieures à 1954, non compris les communes de Tende et de Brigue cédées par l'Italie en 1947 (2 848 habitants au recensement de 1954). Pour 1946, non compris 663 000 (estimation) prisonniers de guerre. A partir de 1957, y compris les fonctionnaires français et leurs familles en Autriche et en Allemagne, ainsi que les Français accomplissant leur service militaire obligatoire à l'etranger.
[137] D'après un échantillon de 5 pour 100 des bulletins de recensement. La diminution marquée du pourcentage de la population active entre 1946 et 1954 est due en partie à un changement de méthode : seuls les enfants et les femmes d'agriculteurs se déclarant expressément "travailleurs familiaux non rémunérés" ont été comptés comme tels tandis qu'en 1946, ces personnes étaient considérées comme travailleurs familiaux sauf indication contraire.
[138] Pour 1933, territoire de 1934, c.à.d. non compris la Sarre. Pour 1939, territoire de 1937, c.à.d. y compris la Sarre. Pour 1946, zones d'occupation américaine, britannique, française et soviétique.
[139] Population de droit, sauf la zone britannique, et Brême dans la zone américaine.
[140] Non compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 384 323 pour l'Allemagne, 133 327 pour l'Allemagne orientale, 247 240 pour la République fédérale d'Allemagne et 3 756 pour Berlin.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[138] For 1933, territory of 1934, i.e., excluding Saar. For 1939, territory of 1937, i.e., including Saar. For 1946, British, French, US and USSR zones of occupation.
[139] *De jure* population except in British zone and Bremen in the US zone.
[140] Excludes prisoners of war, civilian internees and refugees in transit camps, numbering 384 323 for Germany, 133 327 for Eastern Germany, 247 240 for Federal Republic of Germany and 3 756 for Berlin.
[141] Prior to 1951 excluding Dodecanese Islands, ceded by Italy in 1947. For 1951, including armed forces outside country, but excluding alien armed forces within country.
[141a] Excludes housewives who help out in family enterprises.
[141b] Data are results of pilot population census and exclude garrisoned members of the armed forces.
[142] Including Bratislava Bridgehead, ceded to Czechoslavakia in 1947.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[138] Pour 1933, territoire de 1934, c.à.d. non compris la Sarre. Pour 1939, territoire de 1937, c.à.d. y compris la Sarre. Pour 1946, zones d'occupation américaine, britannique, française et soviétique.
[139] Population de droit, sauf la zone britannique, et Brême dans la zone américaine.
[140] Non compris les prisonniers de guerre, les internés civils et les réfugiés dans les camps de transit, soit au total 384 323 pour l'Allemagne, 133 327 pour l'Allemagne orientale, 247 240 pour la République fédérale d'Allemagne et 3 756 pour Berlin.
[141] Pour les années antérieures à 1951, non compris les îles du Dodécanèse, cédées par l'Italie en 1947. Pour 1951, y compris les militaires à l'étranger, mais non compris les militaires étrangers dans le pays.
[141a] Non compris les ménagères aidant à l'exploitation d'entreprises familiales.
[141b] Les données, qui proviennent d'un recensement pilote de la population, ne comprennent pas les militaires en garnison.
[142] Y compris la tête de pont de Bratislava, cédée à la Tchécoslovaquie en 1947.

* Provisional.

[1] Lower age limit (in years) of economically active population tabulations.

[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.

[17] *De jure* population.

[143] Territory at date of census. Including former Free Territory of Trieste, and territory ceded to Yugoslavia and France in 1947.

[144] Excluding non-Maltese armed forces stationed in the area and non-Maltese crews of merchant ships in harbour. For 1957, excluding 14 516 non-Maltese civilians, of which 5 226 males and 9 290 females; including civilian nationals temporarily outside country.

[145] Data obtained as a byproduct of the General Housing Census of 1956; excludes population living in institutions, caravans and on vessels, which for females may be estimated at about 56 000 persons. Female family workers are underenumerated.

[146] Territory of 1923-1937, i.e., including areas ceded to USSR after World War II and excluding Danzig and areas formerly part of Germany. Excluding persons in military establishments.

[147] Data for male and female population exclude 394 495 schedules not tabulated by sex.

* Provisoire.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.

[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.

[17] Population de droit.

[143] Territoire à la date du recensement. Y compris le Territoire libre de Trieste et les territoires cédés à la Yougoslavie et à la France en 1947.

[144] Non compris les militaires non maltais en garnison sur le territoire et les équipages non maltais de navires marchands dans le port. Pour 1957, non compris 14 516 civils non maltais, dont 5 226 du sexe masculin et 9 290 du sexe féminin y compris les civils maltais se trouvant temporairement hors du pays.

[145] Données obtenues accessoirement à l'occasion du recensement général de l'habitation de 1956; non compris les personnes vivant dans des institutions, des roulottes et remorques et à bord de bateaux, que l'on peut estimer à 56 000 personnes en ce qui concerne le sexe féminin. Il y a eu sous-dénombrement dans le cas des travailleurs familiaux du sexe féminin.

[146] Territoire de 1923-1937, c.à.d. y compris les zones cédées à l'URSS après la deuxième guerre mondiale et non compris Dantzig et les autres régions qui faisaient précédemment partie de l'Allemagne. Non compris les personnes se trouvant dans des établissements militaires.

[147] Non compris dans les chiffres de la population masculine et de la population féminine 394 495 bulletins non classés par sexe.

[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] De *jure* population.
[148] Data for 1930 apparently include *camponesas*, i.e., farm housewives, some of whom also perform agricultural duties. If these are included in data for 1950, percentages for that year become 41.9 for both sexes and 22.6 for females.
[149] Territory of 1930, i.e., including Southern Dobruja, ceded to Bulgaria in 1940, and Bessarabia and Northern Bucovina, ceded to USSR in 1940.
[150] Excluding Northern Ireland.
[151] For 1931, excluding territory ceded by Italy in 1947. Beginning 1948, excluding Koper and Buje, that part of the former Free Territory of Trieste incorporated in October 1954, with a population estimated at 54 876 (27 341 males, 27 535 females).
[152] Includes housewives who also perform agricultural duties irrespective of number of hours worked.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[148] Il semble que les données pour 1930 comprennent les *camponesas*, c'est-à-dire les fermières, dont certaines accomplissent également des travaux agricoles. Si l'on inclut cette catégorie dans les données pour 1950, le pourcentage atteint 41,9 pour les deux sexes et 22,6 pour les femmes.
[149] Territoire de 1930, c.à.d. y compris la Dobroudja méridionale cédée à la Bulgarie en 1940, ainsi que la Bessarabie et la Bucovine du Nord cédées à l'URSS en 1940.
[150] Non compris l'Irlande du Nord.
[151] Pour 1931, non compris le territoire cédé par l'Italie en 1947. A partir de 1948, non compris Koper et Buje, c.à.d. la partie de l'ancien Territoire libre de Trieste, rattachée à la Yougoslavie en octobre 1954 et dont la population était estimée à 54 876 habitants (27 341 du sexe masculin et 27 535 du sexe féminin).
[152] Y compris les ménagères accomplissant également des travaux agricoles, quel que soit le nombre d'heures de travail effectuées.

* Provisional.
[1] Lower age limit (in years) of economically active population tabulations.
[9] Data as published by International Labour Office. Total populations may differ from those shown elsewhere.
[17] *De jure* population.
[48] *De jure* population, but including armed forces stationed in the area.
[153] Economically active population for 1950 includes 434 female farm workers and 1 156 "operative and kindred workers" not able to be identified in the 1956 data.
[154] Excluding full-blooded aborigines, estimated at 60 000 in 1933, 46 638 in 1947 and 39 319 in 1954.
[155] Economically active population for 1946 includes 21 108 female "unpaid domestic workers", some of whom undoubtedly help out in family enterprises; 1956 data exclude this group, number unknown. If "unpaid domestic workers" are excluded from data for 1946, rates become 31.1 for both sexes and 4.4 for females.
[156] Economically active population includes persons whose occupation was not stated, numbering 29 289 (15 342 males and 13 947 females) in 1951.
[157] Data exclude schedules not tabulated by sex, numbering 1 209 for total population and 1 037 for economically active population.
[158] Economically active population includes 4 172 persons (1 978 males, 2 194 females) who did not declare their occupation, on the assumption that many probably are economically active.
[159] Excluding armed forces stationed in the area. Reason for lack of comparability with 1950 rates not ascertained.

* Provisoire.
[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.
[9] Données publiées par le Bureau International du Travail, les chiffres de la population totale peuvent différer de ceux qui sont donnés ailleurs.
[17] Population de droit.
[48] Population de droit, mais y compris les militaires en garnison sur le territoire.
[153] Pour 1950, la population active comprend 434 ouvrières agricoles et 1 156 "ouvriers et assimilés" qui n'ont pas pu être classés avec plus de précision dans les données pour 1956.
[154] Non compris les aborigènes de race pure dont le nombre a été estimé à 60 000 en 1933, 46 638 en 1947 et 39 319 en 1954.
[155] Pour 1946, la population active comprend 21 108 femmes classées comme "travailleurs familiaux non rémunérés", dont quelques-unes ont certainement aidé à l'exploitation d'entreprises familiales; les données pour 1956 ne comprennent pas ce groupe, dont l'effectif n'est pas connu. Si l'on exclut les "travailleurs familiaux non rémunérés" des données pour 1946, le taux est ramené à 31,1 pour les deux sexes et 4,4 pour les femmes.
[156] La population active comprend les personnes qui n'ont pas déclaré leur profession, soit 29 289 (15 342 hommes et 13 947 femmes) en 1951.
[157] Non compris les bulletins non classés par sexe, soit 1 209 pour la population totale et 1 037 pour la population active.
[158] La population active comprend 4 172 personnes (1 978 du sexe masculin et 2 194 du sexe féminin) qui n'ont pas déclaré leur profession mais dont on a supposé qu'elles devaient être en majorité "actives".
[159] Non compris les militaires en garnison sur le territoire. Les raisons du défaut de comparabilité entre les taux de 1950 ne sont pas déterminés.

[1] Lower age limit (in years) of economically active population tabulations.

[160] Prior to 1945, excluding Maori population. Beginning 1945, excluding armed forces outside country, numbering 45 381 in 1945, 1 894 in 1951 and 2 162 in 1956.

[161] Economically active population for 1951 excludes persons who did not report a classifiable occupation. Data for 1956 include 15 262 female unpaid family workers in agriculture; if these are excluded, rates become 24.5 for both sexes and 4.3 for females.

[162] Territory of 1923-1938.

[163] Economically active population excludes members of families (of collective farmers, workers and employees) working on individual agricultural plots.

[164] Published by Economic Commission for Europe.

[1] Limite d'âge inférieure (en années) employée pour le classement de la population active.

[160] Pour les années antérieures à 1945, non compris les Maoris. A partir de 1945, non compris les militaires stationnés à l'étranger, soit 45 381 en 1945, 1 894 en 1951 et 2 162 en 1956.

[161] Pour 1951, la population active ne comprend pas les personnes qui n'ont pas déclaré une profession susceptible d'être classée. Pour 1956, les données comprennent 15 262 femmes travaillant sans rémunération dans des entreprises agricoles familiales; si l'on exclut cette catégorie, le taux est ramené à 24,5 pour les deux sexes et 4,3 pour les femmes.

[162] Territoire de 1923-1938.

[163] La population active ne comprend pas les membres de la famille (des travailleurs des exploitations agricoles collectives, des ouvriers et des employés) accomplissant des travaux agricoles sur des terrains individuels.

[164] Donnée publiée par la Commission économique pour l'Europe.

13. Live births and crude live birth rates: 1950–1959

[Rates are the number of live births per 1 000 population. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For discussion, see page 38.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[3] Excludes data for 2 departments of the Sahara.
[4] Data are baptisms recorded in church registers.
[5] European, Indian and Coloured (mixed) population, together comprising about 1 per cent of the total.
[6] Rate(s) not computed by the Statistical Office of the United Nations.
[7] For European population only.
[8] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.
[9] Formerly Belgian Congo; declared independent 30 June 1960.
[10] Estimated rate obtained from results of annual demographic sample survey; corresponding registered rate for Congo in 1953 was 30.0.
[11] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Senegal, 20 June.
[12] Data are for a compulsory registration area of 36 towns and townships which comprises about 12 per cent of total population and is not representative of Ghana.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non celle de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[3] Non compris 2 départements du Sahara.
[4] D'après les baptêmes inscrits sur les registres des églises.
[5] Européens, personnes d'origine indienne et personnes de couleur (métis), représentant ensemble 1 pour cent environ de la population totale.
[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.
[7] Européens seulement.
[8] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.
[9] Anciennement Congo belge, proclamé indépendant le 30 juin 1960.
[10] Taux estimatif obtenu à partir des résultats d'une enquête démographique annuelle par sondage; le taux correspondant établi d'après les données d'enregistrement pour le Congo en 1953 a été de 30,0.
[11] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 à la date ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Sénégal, le 20 juin.
[12] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative de l'ensemble du Ghana.

13. Naissances vivantes et taux bruts de natalité : 1950–1959

[Les taux représentent le nombre de naissances vivantes pour 1 000 habitants. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Voir explications à la page 88.]

[21] *56.8*	...	...	...	...	...	...	...	...	...	Population indigène

[13] For registration area only; registration in rest of country incomplete.
[14] Estimate obtained from results of 1955 demographic sample survey of residents, but rate computed on total population including non-residents. Corresponding registered rate was 17.8.
[15] Estimated rate for indigenous rural population, obtained from results of 1957-58 demographic sample survey of 69 villages.
[16] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.
[17] For indigenous population only.
[18] Data are for northern part of former Spanish Protectorate.
[19] Marked increase observed beginning 1954 due to extension of civil-registration system to Moslem population, 1 July 1954.
[20] Former French Protectorate. Rates computed on estimates of population which exclude personnel in military establishments.
[21] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development as measured by educational level, language used and mode of living.
[22] Estimated rate for indigenous population; basis unknown.
[23] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[24] Estimated rate obtained from results of 1950 demographic sample survey.

[13] Zone d'enregistrement seulement; enregistrement incomplet dans le reste du pays.
[14] Estimation obtenue à partir des résultats de l'enquête démographique par sondage sur les résidents effectuée en 1955; mais taux calculé par rapport à la population totale y compris les non-résidents. Le taux correspondant établi d'après les données d'enregistrement était de 17,8.
[15] Taux estimatif concernant la population indigène rurale; obtenu à partir des résultats d'une enquête démographique par sondage effectuée en 1957-58 dans 69 villages.
[16] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.
[17] Population indigène seulement.
[18] Partie nord de l'ancien protectorat espagnol.
[19] L'augmentation sensible observée depuis 1954 s'explique par l'entrée en vigueur, le 1er juillet 1954, d'un système d'enregistrement des faits d'état civil pour la population musulmane.
[20] Ancien protectorat français. Taux calculés sur la base d'estimations de la population qui ne comprennent pas les militaires se trouvant dans des établissements de l'armée.
[21] Population remplissant certaines conditions fixées par la loi, c.à.d. ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[22] Taux estimatif pour la population indigène; base inconnue.
[23] L'enregistrement ne serait complet que pour la population civilisée qui représente une fraction relativement faible de la population totale.
[24] Taux estimatif obtenu à partir des résultats de l'enquête démographique par sondage de 1950.

13. Live births and crude birth rates (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[10] Estimated rate obtained from results of annual demographic sample survey; corresponding registered rate for Congo in 1953 was 30.0.
[11] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Dahomey, 1 August; Ivory Coast, 7 August; Senegal, 20 June.
[11a] For Freetown only.
[25] Estimated rate for village population obtained from results of 1953-55 demographic sample survey.
[26] Formerly known as Spanish Guinea and comprising Spanish African Provinces of Rio Muni and Fernando Poo.
[27] Data exclude live-born infants dying within 24 hours of birth.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non celle de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[10] Taux estimatif obtenu à partir des résultats d'une enquête démographique annuelle par sondage; le taux correspondant établi d'après les données d'enregistrement pour le Congo en 1953 a été de 30,0.
[11] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 à la date ci-après : Dahomey, le 1er août; Côte-d'Ivoire, le 7 août; Sénégal, le 20 juin.
[11a] Pour Freetown seulement.
[25] Taux estimatif pour la population des villages, obtenu à partir des résultats de l'enquête démographique par sondage de 1953-55.
[26] Anciennement Guinée espagnole; ce territoire comprend les provinces africaines espagnoles de Rio Muni et de Fernando Poo.
[27] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.

13. Naissances vivantes et taux bruts de natalité (suite)

[28] Including data for southern part of former Spanish Protectorate, transferred to Morocco on 10 April 1958.
[29] Estimate obtained from results of 1955-56 sample census of population.
[30] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.
[31] Marked increase observed in 1955 due to extension of civil registration facilities in 1954.
[32] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.
[33] Beginning 1957, data stated to be complete.
[34] Marked increase observed beginning 1953 due to extension of compulsory civil registration to natives (Bantu) population in rural areas on 1 January 1952.
[35] Birth registration in country as a whole estimated to be about 80 per cent complete in 1956.
[36] For localities having Health Bureaus, which comprised 44.6 per cent of total population that year.
[37] Excluding nomad population, estimated at 179 722 at the end of 1956, and Palestinian refugees, numbering 119 648 on 1 July 1959; for refugees excluded each year 1950-1957, see Table 4.
[38] Data are births registered within one month of occurrence; additional registrations made during 1959 numbered 130 801.
[38a] Registered rate; estimated rates for Afro-Arab population, obtained from the results of the 1958 population census, are 30 for Zanzibar and 40 for Pemba.

[28] Y compris la partie sud de l'ancien protectorat espagnol, transférée au Maroc le 10 avril 1958.
[29] Estimation obtenue à partir des résultats d'un recensement par sondage de la population effectué en 1955-56.
[30] Anciennement Territoire sous tutelle du Togo sous administration française, proclamé indépendant le 27 avril 1960.
[31] L'augmentation marquée observée en 1955 est due à l'extension de l'enregistrement des faits d'état civil en 1954.
[32] Non compris les réfugiés algériens temporairement dans le pays, au nombre d'environ 180 000 en 1959 (estimation).
[33] A partir de 1957, les données seraient complètes.
[34] L'augmentation sensible observée depuis 1953 s'explique par l'entrée en vigueur, le 1er janvier 1952, d'un système d'enregistrement obligatoire pour les indigènes (Bantous) des régions rurales.
[35] La complétude de l'enregistrement des naissances dans l'ensemble du pays a été estimé à 80 pour cent environ en 1956.
[36] Données concernant les localités dotées d'un bureau d'hygiène, qui comprenaient 44,6 pour cent de la population totale au cours de l'année en question.
[37] Non compris les nomades dont le nombre était estimé à 179 722 à la fin de 1956, et les réfugiés palestiniens au nombre de 119 648 le 1er juillet 1959; pour le nombre des réfugiés exclus au cours de chacune des années 1950-1957, voir le tableau 4.
[38] Naissances enregistrées dans le mois qui suit l'événement; 130 801 naissances supplémentaires ont été enregistrées au cours de l'année 1959.
[38a] Taux provenant des données d'enregistrement. Taux estimatifs pour la population afro-arabe obtenus à partir des résultats du recensement de population de 1958 : 30 pour Zanzibar et 40 pour Pemba.

13. Live births and crude birth rates (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[6] Rate(s) not computed by the Statistical Office of the United Nations.
[27] Data exclude live-born infants dying within 24 hours of birth.
[39] Excluding tourists and United Kingdom and United States armed forces and their dependants stationed in the area.
[40] Prior to 1956, data are tabulated by year of registration rather than by year of occurrence.
[41] Data include births to Canadian residents temporarily in the United States, but exclude births to United States residents temporarily in Canada.
[42] Data are births registered during the period 1950-1959, tabulated by year of occurrence. According to a study of births registered 1946-1953, 81 per cent were registered in year of occurrence, 93.5 per cent within 2 years and 94.7 per cent within 3 years.
[43] Data tabulated by year of occurrence.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non celle de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.
[27] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.
[39] Non compris les touristes et les militaires américains et britanniques sur le territoire, ainsi que les personnes à leur charge les accompagnant.
[40] Pour les années antérieures à 1956, données classées selon l'année de l'enregistrement et non celle de l'événement.
[41] Y compris les enfants nés de résidents canadiens se trouvant temporairement aux Etats-Unis, mais non compris les enfants nés de résidents des Etats-Unis se trouvant temporairement au Canada.
[42] Naissances enregistrées pendant la période 1950-1959, classées selon l'année de l'événement. D'après une étude des naissances enregistrées en 1946-1953, 81 pour cent l'ont été au cours de l'année de l'événement, 93,5 pour cent dans les 2 ans et 94,7 pour cent dans les 3 ans.
[43] Données classées selon l'année de l'événement.

13. Naissances vivantes et taux bruts de natalité (suite)

[Voir note au début du tableau.]

[44] Birth registration estimated to be 85-90 per cent complete in 1956.

[45] Beginning 1952, data include births occurring outside the islands if one or both parents are listed in the population register of Netherlands Antilles. Except for Curaçao, since 1957 data exclude live-born infants dying before registration of birth.

[46] Excluding data for Canal Zone, shown separately above. Prior to 1952, excluding tribal Indian population (numbering 48 654 in 1950). Beginning 1952, including tribal Indian population in Provinces of Bocas del Toro and Darien, where they constitute a relatively high proportion of the population (40.8 and 28.5 per cent, respectively).

[47] Prior to 1953, data are tabulated by year of occurrence.

[48] Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.

[49] Estimated rate for population born in Brazil, obtained from demographic analysis of 1940 and 1950 population census returns.

[50] Data published by the World Health Organization Regional Office for the Americas.

[51] Excluding Amerindians, shown separately below.

[44] La complétude de l'enregistrement des naissances a été estimée à 85-90 pour cent en 1956.

[45] A partir de 1952, y compris les naissances survenues en dehors des îles si l'un des parents au moins est inscrit sur le registre de population des Antilles néerlandaises. Sauf pour Curaçao à partir de 1957, non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[46] Non compris la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut). Pour les années antérieures à 1952, non compris les Indiens vivant en tribus (48 654 en 1950). A partir de 1952, y compris les Indiens vivant en tribus dans les provinces de Bocas del Toro et de Darien, où ils constituent une proportion assez forte de la population (40,8 et 28,5 pour cent respectivement).

[47] Pour les années antérieures à 1953, données classées selon l'année de l'événement.

[48] Pour les années antérieures à 1954, données classées selon l'année de l'enregistrement et non celle de l'événement.

[49] Taux estimatif pour la population née au Brésil, obtenu à partir d'une analyse démographique des résultats des recensements de la population de 1940 et de 1950.

[50] Chiffres publiés par l'Organisation mondiale de la santé (Bureau régional des Amériques).

[51] Non compris les Amérindiens qui font l'objet d'une rubrique distincte (voir plus bas).

13. Live births and crude birth rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Data exclude live-born infants dying before registration of birth.

[4] Data are baptisms recorded in church registers.

[6] Rate(s) not computed by the Statistical Office of the United Nations.

[27] Data exclude live-born infants dying within 24 hours of birth.

[52] For 1950, data are estimates based on population enumerated at 1952 census and death statistics 1950-1952. Beginning 1951, data are births by year of occurrence, but include an upward adjustment for underregistration of 8.8 per cent for 1951 and 5 per cent for 1952, 1953 and 1954.

[53] Excluding Indian jungle population. Prior to 1955, data exclude births in Galápagos Islands and, prior to 1954, also those in provinces of Napo Pastaza, Morona Santiago and Zamora Chinchipe, but rates are computed on total population.

[54] Birth registration estimated to be about 70 per cent complete in 1956. Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.

[55] Estimate, based on reports for 21 municipalities in which registration is believed to be complete.

[56] Excluding Indian jungle population, estimated at 350 000 in 1940.

[57] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1950-1958 and 38 000 in 1959.

[58] Excluding Indian jungle population, numbering 56 705 in 1950.

[59] Estimated rate; basis unknown.

[60] Numbering, for 1950-1959, 49, 60, 62, 59, 62, 61, 74, 68, 62 and 50, respectively, and having population of approximately 2 million in 1959.

[61] Estimated for year ended April 1959 from results of 1953-1959 demographic sample survey in 345 villages.

[62] According to a test, birth registration 88 per cent complete in 1953.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Provisoire.

† Données classées selon l'année de l'enregistrement et non celle de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[4] D'après les baptêmes inscrits sur les registres des églises.

[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.

[27] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.

[52] 1950 : estimations établies d'après la population dénombrée au recensement de 1952 et les statistiques de la mortalité de 1950-1952. A partir de 1951, les données représentent les naissances classées selon la date de l'événement, compte tenu d'un ajustement pour sous-enregistrement de 8,8 pour cent pour 1951 et de 5 pour cent pour 1952, 1953 et 1954.

[53] Non compris les Indiens de la jungle. Pour les années antérieures à 1955, non compris les naissances survenues dans les îles Galápagos et, pour les années antérieures à 1954, dans les provinces de Napo Pastaza, de Morona Santiago et de Zamora Chinchipe; les taux ont été cependant calculés sur la base de la population totale.

[54] La complétude de l'enregistrement des naissances a été estimée à 70 pour cent environ en 1956. Pour les années antérieures à 1954, données classées selon l'année de l'enregistrement et non celle de l'événement.

[55] Estimation établie d'après les données fournies par 21 municipalités où l'enregistrement serait complet.

[56] Non compris les Indiens de la jungle, au nombre de 350 000 en 1940 (estimation).

[57] Non compris les Indiens et les Noirs vivant en tribus, au nombre de 26 000 en 1950-1958 et de 38 000 en 1959 (estimation).

[58] Non compris les Indiens de la jungle, au nombre de 56 705 en 1950.

[59] Taux estimatif; base inconnue.

[60] 1950 : 49; 1951 : 60; 1952 : 62; 1953 : 59; 1954 : 62; 1955 : 61; 1956 : 74; 1957 : 68; 1958 : 62; 1959 : 50. Population de ces villes en 1959 : 2 million environ.

[61] Estimation pour la période de 12 mois terminée en avril 1959, établie à partir des résultats de l'enquête démographique par sondage effectuée dans 345 villages en 1958-1959.

[62] D'après un sondage, la complétude de l'enregistrement des naissances a été de 88 pour cent en 1953.

13. Naissances vivantes et taux bruts de natalité (suite)

[Voir note au début du tableau.]

[63] Rates are estimated from results of surveys and reports from areas where registration is considered satisfactory. Released by State Statistical Bureau, Peking, 1958.
[64] Excluding armed forces and foreigners.
[65] Former British dependency; declared independent 16 August 1960.
[66] Beginning 1955, data are official estimates which include an adjustment for incompleteness of reporting.
[67] Rates computed on population excluding armed forces.
[68] Estimated rate based on demographic analysis of 1941 and 1951 population census returns.
[69] Estimated rate for rural India, obtained from results of 7th and 14th rounds of National Sample Survey.
[70] Data are for a changing group of states and territories which, in 1958, included a population of about 300 million.
[71] Birth registration completeness for individual states varied between 65 and over 90 per cent for the period 1951-1955.
[72] Data are for certain regencies in Java, numbering for 1952-1959, 59, 97, 86, 90, 99, 79, 94 and 97, respectively, and having a population of about 54 million in 1959.
[73] Registered rate; estimated rate based on 1953-1957 data in selected regencies where registration is believed to be fairly complete, is 40.3.
[74] Prior to 1952, data are for years ended 20 March. Beginning 1952, data are for years ended 21 December. In 1954, births registered in year of occurrence accounted for 59 per cent of total births registered.
[75] Registered rate; estimated rate, based on demographic analysis of results of 1956 census of population and subsequent national sample survey in 40 towns and 300 villages, is 45.
[76] Prior to 1957, excluding Bedouin population in the Negev.
[77] Data are for Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively.

[63] Taux estimatifs calculés à partir de résultats d'enquêtes et de rapports concernant des zones où l'enregistrement est considéré comme satisfaisant. Source : Direction des statistiques, Pékin, 1958.
[64] Non compris les militaires et les étrangers.
[65] Ancienne possession britannique proclamée indépendante le 16 août 1960.
[66] A partir de 1955, estimations officielles compte tenu d'un ajustement pour incomplétude des déclarations.
[67] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires.
[68] Taux estimatif obtenu à partir d'une analyse démographique des résultats des recensements de population de 1941 et de 1951.
[69] Taux estimatif pour la population rurale de l'Inde; calculé à partir des résultats des 7ème et 14ème phases de l'enquête nationale par sondage.
[70] Données se rapportant à un groupe variable d'Etats et de territoires qui, en 1958, comptaient quelque 300 millions d'habitants.
[71] La complétude de l'enregistrement des naissances dans les divers Etats a varié entre 65 et plus de 90 pour cent en 1951-1955.
[72] Données se rapportant à certaines régences de Java, au nombre de : 1952 : 59; 1953 : 97; 1954 : 86; 1955 : 90; 1956 : 99; 1957 : 79; 1958 : 94; 1959 : 97, et qui comptaient quelque 54 millions d'habitants en 1959.
[73] Taux établi d'après les données d'enregistrement; le taux estimatif établi pour 1953-1957 d'après les données provenant des régences où l'enregistrement serait assez complet, est de 40,3.
[74] Pour les années antérieures à 1952, données se rapportant à des périodes de 12 mois se terminant le 20 mars. A partir de 1952, données se rapportant à des périodes de 12 mois se terminant le 21 décembre. En 1954, les naissances enregistrées pendant l'année de l'événement ont représenté 59 pour cent du total des naissances enregistrées.
[75] Taux provenant de données d'enregistrement; le taux estimatif, d'après une analyse demographique des résultats du recensement de population de 1956 et d'une enquête ultérieure par sondage dans 40 villes et 300 villages, est de 45.
[76] Pour les années antérieures à 1957, non compris les Bédouins du Negeb.
[77] Ne concerne que les nationaux japonais se trouvant au Japon. Pour la période antérieure à mai 1952, non compris l'archipel des Tokara et, pour les années antérieures à 1954, les îles Amami, détachées des îles Ryû-Kyû et rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953, respectivement.

13. Live births and crude birth rates (continued)

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[6] Rate(s) not computed by the Statistical Office of the United Nations.
[67] Rates computed on population excluding armed forces.
[78] Excluding foreigners, including registered Palestinian refugees. For number of refugees, see Table 4.
[79] Registration estimated to be about 80 per cent complete.
[80] For East Jordan only.
[81] Data are for Korean nationals only.
[82] Excluding non-resident foreigners and registered Palestinian refugees. For number of refugees, see Table 4.
[83] Data include late foetal deaths.
[84] Source: press release by Deputy Minister of Health.
[85] Estimated rate, obtained from demographic analysis of 1952-1954 population census returns.
[86] Data are for a changing registration area which, in 1951, comprised about 92 per cent of total population.
[87] Data are incomplete returns; in 1951, 1952 and 1953, reports were received from only 66 per cent of the local civil registrars; in 1956, 1957 and 1958, from 78, 81 and 84 per cent, respectively. Rates are computed on total population.
[88] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[89] Excluding Allied military and civilian personnel and their dependants stationed in the area.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non celle de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.
[67] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires.
[78] Non compris les étrangers, mais y compris les réfugiés palestiniens immatriculés; pour le nombre des réfugiés, voir le tableau 4.
[79] L'enregistrement saisirait 80 pour cent des naissances environ.
[80] Ne concerne que la partie orientale de la Jordanie.
[81] Nationaux coréens seulement.
[82] Non compris les étrangers non-résidents et les réfugiés palestiniens immatriculés. Pour le nombre des réfugiés, voir le tableau 4.
[83] Y compris les morts foetales tardives.
[84] Source : communiqué du vice-ministre de la santé.
[85] Taux estimatif obtenu à partir de l'analyse démographique des résultats du recencement de population de 1952-1954.
[86] Les données se rapportent à une zone d'enregistrement qui varie selon les années et qui, en 1951, comprenait 92 pour cent environ de la population totale.
[87] Données incomplètes; en 1951, 1952 et 1953, environ 66 pour cent seulement des officiers d'état-civil locaux ont fourni des renseignements; en 1956, 1957 et 1958, ce pourcentage a été de 78, 81 et 84 respectivement. Taux calculés sur la base de la population totale.
[88] L'enregistrement ne serait complet que pour la population civilisée qui représente une fraction relativement faible de la population totale.
[89] Non compris les militaires et le personnel civil allié en poste sur le territoire, ainsi que les personnes à leur charge les accompagnant.

13. Naissances vivantes et taux bruts de natalité (suite)

[90] Registration estimated to be about 88 per cent complete in 1956; prior to 1955, data are tabulated by year of registration rather than by year of occurrence.

[91] Estimated rate, based on 6.2 per cent sample of population of 1 700 villages.

[92] Rates computed on population excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants.

[93] Prior to 1953, data are tabulated by year of registration rather than by year of occurrence.

[94] Registered rate. Rate estimated from demographic analysis of results of 1947 population census and 1956 Demographic and Economic Survey of Thailand is 42.

[95] Prior to 1956, data are for 22 provinces and the prefecture of Saigon; in 1956, data for Phuóc-long and Kien-phong provinces are excluded, in 1957, Darlac and Pleiku provinces, for 1958 Kontum and Pleiku provinces, and for 1959 Phuóc-thành, Bính-dinh, Darlac and Quáng-duc provinces and the city Huê.

[96] Beginning 1955, excluding data for dependencies of Guernsey.

[97] Beginning 1953, data exclude those infants born alive after less than 28 weeks' gestation, of less than 1 000 grammes in weight and 35 centimetres in length, who die within 24 hours of birth.

[98] Excluding Greenland and Faeroe Islands, shown separately.

[99] Births for 1950 are for Finnish nationals in Finland only but rate is computed on population which includes resident aliens; beginning 1951, data include Finnish nationals temporarily outside country.

[90] La complétude de l'enregistrement a été estimée à 88 pour cent environ en 1956; pour les années antérieures à 1955, données classées selon l'année de l'enregistrement et non celle de l'événement.

[91] Taux estimatif établi à partir d'un échantillon représentant 6,2 pour cent de la population de 1 700 villages.

[92] Taux calculés sur la base de la population non compris les personnes de passage à bord de bateaux, ni les militaires et le personnel civil non domiciliés sur le territoire ainsi que les personnes à leur charge les accompagnant.

[93] Pour les années antérieures à 1953, données classées selon l'année de l'enregistrement et non celle de l'événement.

[94] Taux établi d'après les données d'enregistrement; le taux estimatif, calculé à partir de l'analyse démographique des résultats du recensement de population de 1947 et de l'Enquête démographique et économique de la Thaïlande, est de 42.

[95] Pour les années antérieures à 1957, les données se rapportent à 22 provinces ainsi qu'à la Préfecture de Saigon, mais celles de 1956 ne tiennent pas compte des provinces de Phuóc-long et de Kiên-phong; celles de 1957, des provinces de Darlac et de Pleiku; celles de 1958, des provinces de Kontum et de Pleiku; celles de 1959 des provinces de Phuóc-thành, Bính-dinh, Darlac et Quáng-duc, ni de la ville de Huê.

[96] A partir de 1955, non compris les dépendances de Guernesey.

[97] A partir de 1953, il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1000 grammes, mesurant moins de 35 centimètres et décédés dans les 24 heures de leur naissance.

[98] Non compris le Groenland et les îles Féroé qui font l'objet de rubriques distinctes.

[99] Pour 1950, les données ne concernent que les nationaux finlandais se trouvant en Finlande, mais le taux a été calculé sur la base d'un chiffre de population comprenant les résidents étrangers; à partir de 1951, y compris les nationaux finlandais se trouvant temporairement hors du pays.

13. Live births and crude birth rates (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[40] Prior to 1956, data are tabulated by year of registration rather than by year of occurrence.

[67] Rates computed on population excluding armed forces.

[100] Data include births among alien armed forces stationed in the area and among national armed forces wherever stationed, but rates are computed on population excluding alien armed forces and members of career military service outside country, unless on duty in Germany and Austria.

[101] Data include births among residents of the Federal Republic of Germany temporarily in West Berlin, exclude births among alien armed forces and non-resident civilians temporarily in the area.

[102] Data include births among residents of West Berlin temporarily in the Federal Republic of Germany, exclude births among alien armed forces stationed in the area and non-resident civilians temporarily in the area.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Provisoire.

† Données classées selon l'année de l'enregistrement et non celle de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[40] Pour les années antérieures à 1956, données classées selon l'année de l'enregistrement et non celle de l'événement.

[67] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires.

[100] Y compris les enfants nés de militaires étrangers en garnison sur le territoire et de militaires français où qu'ils soient; cependant, les taux sont calculés sur la base d'un chiffre de population qui ne comprend pas les militaires étrangers en France et les militaires français de carrière en garnison à l'étranger, à l'exception de l'Allemagne et de l'Autriche.

[101] Y compris les enfants nés de résidents de la République fédérale d'Allemagne se trouvant temporairement à Berlin-ouest, mais non compris les enfants nés de militaires étrangers et de civils non-résidents se trouvant temporairement sur le territoire.

[102] Y compris les enfants nés de résidents de Berlin-ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris les enfants nés de militaires étrangers et de civils non-résidents se trouvant temporairement sur le territoire.

13. Naissances vivantes et taux bruts de natalité (suite)

[103] Rates computed on population including armed forces stationed outside country and excluding alien armed forces stationed in the area.
[104] Data are births registered within one year of occurrence.
[105] Computed on population including armed forces and civilians stationed outside country.
[106] Rates computed on population excluding non-Maltese armed forces stationed in the area, but including civilian nationals temporarily outside country.
[107] Data include births occurring outside country if one or both parents are included in a Netherlands population register. Prior to 1959, excluding data for Amboynese living in camps.
[108] Data include upward adjustment to cover deficiency of 1.0-1.4 per cent in registration.
[109] Data are by year of occurrence for England and Wales and year of registration for Northern Ireland and Scotland.
[110] Computed on population including merchant seamen at sea for England and Wales.

[103] Taux calculés sur la base d'un chiffre de population qui comprend les militaires du pays en garnison à l'étranger, mais non les militaires étrangers en garnison sur le territoire.
[104] Naissances enregistrées dans l'année qui suit l'événement.
[105] Taux calculés sur la base d'un chiffre de population qui comprend les militaires et les civils en poste à l'étranger.
[106] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires non maltais en garnison sur le territoire, mais qui comprend les civils maltais temporairement hors du territoire.
[107] Y compris les naissances survenues à l'étranger si l'un des parents au moins est inscrit sur un registre de population néerlandais. Pour les années antérieures à 1949, non compris les Amboynais vivant dans des camps.
[108] Compte tenu d'un ajustement destiné à compenser les lacunes de l'enregistrement (1,0-1,4 pour cent).
[109] Pour l'Angleterre et le Pays de Galles, données classées selon l'année de l'événement; pour l'Irlande du Nord et l'Ecosse, selon l'année de l'enregistrement.
[110] Pour l'Angleterre et le Pays de Galles, taux calculés sur la base d'un chiffre de population qui comprend les marins de commerce en mer.

13. Live births and crude birth rates (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
† Data tabulated by year of registration rather than occurrence.
[1] Data exclude live-born infants dying before registration of birth.
[6] Age of mother obtained by subtracting year of birth of mother from year of birth of child.
[7] Excluding data for Newfoundland. Data include births to Canadian residents temporarily in the United States, but exclude births to United States residents temporarily in Canada.
[8] Data exclude births which occurred prior to 22 May 1950.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
† Données classées selon l'année de l'enregistrement et non l'année de l'événement.
[1] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[6] Age de la mère obtenu en retranchant son année de naissance de celle de l'enfant.
[7] Non compris Terre-Neuve. Y compris les enfants nés de résidents canadiens se trouvant temporairement aux Etats-Unis, mais non compris les enfants nés de résidents des Etats-Unis se trouvant temporairement au Canada.
[8] Non compris les naissances qui ont eu lieu avant le 22 mai 1950.

Italics: Data are unreliable or of unknown completeness.
† Data tabulated by year of registration rather than occurrence.
[1] Data exclude live-born infants dying before registration of birth.
[6] Age of mother obtained by subtracting year of birth of mother from year of birth of child.
[9] Data are confinements resulting in live births.
[10] Data are for Aruba and Curaçao, but include births occurring outside the islands if one or both parents are listed in the population register of Netherlands Antilles. For Aruba, data exclude live-born infants dying before registration of birth.
[11] Excluding tribal Indians, numbering 48 654 in 1950, and data for Canal Zone shown separately above.
[12] Data are based on a 50 per cent sample of recorded births.
[13] Excluding data for Alaska and Hawaii, which became the 49th and 50th States of the Union on 3 January and 21 August 1959, respectively.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
† Données classées selon l'année de l'enregistrement et non l'année de l'événement.
[1] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[6] Age de la mère obtenu en retranchant son année de naissance de celle de l'enfant.
[9] Les données représentent le nombre d'accouchements d'enfants vivants.
[10] Aruba et Curaçao, mais y compris les naissances survenues en dehors de ces îles si les parents, ou l'un d'eux seulement, sont inscrits sur les registres de population des Antilles néerlandaises. Pour Aruba, non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[11] Non compris les Indiens vivant en tribus (48 654 en 1950) ni la Zone du Canal qui fait l'objet d'une rubrique distincte (Voir plus haut).
[12] D'après un échantillon de 50 pour 100 des naissances enregistrées.
[13] Non compris l'Alaska et Hawaii qui sont devenus les 49ème et 50ème Etats de l'Union le 3 janvier et le 21 août 1959 respectivement.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data exclude live-born infants dying before registration of birth.
[4] Data exclude live-born infants dying within 24 hours of birth.
[9] Data are confinements resulting in live births.
[14] Excluding Amerindians.
[15] Data are baptisms recorded in church registers.
[16] Excluding Indian jungle population.
[17] Data are for an area covered by 44 Health Units and 76 Health "Posts", which is not representative of Paraguay and for which population is not available.
[18] Data are estimates, based on results of an April 1958 demographic sample survey in 345 villages.
[19] Excluding armed forces and foreigners.
[20] Former British dependency; declared independent 16 August 1960.
[21] Data are official estimates of confinements resulting in live births which include an adjustment for incompleteness of reporting.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non l'année de l'événement.
[1] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[4] Non compris les enfants nés vivants décédés dans les 24 heures.
[9] Les données représentent le nombre d'accouchements d'enfants vivants.
[14] Non compris les Amérindiens.
[15] Baptêmes inscrits sur les registres des églises.
[16] Non compris les Indiens de la jungle.
[17] Les données se rapportent à une zone desservie par 44 centres sanitaires et 76 postes sanitaires, qui n'est pas représentative du Paraguay et dont la population n'est pas connue.
[18] Estimations d'après les résultats d'une enquête démographique par sondage exécutée dans 345 villages en avril 1958.
[19] Non compris les militaires et les étrangers.
[20] Ancienne possession britannique proclamée indépendante le 16 août 1960.
[21] Estimations officielles des accouchements d'enfants vivants compte tenu d'un ajustement destiné à compenser les lacunes de l'enregistrement.

Italics: Data are unreliable or of unknown completeness.

[1] Data exclude live-born infants dying before registration of birth.

[6] Age of mother obtained by subtracting year of birth of mother from year of birth of child.

[30] Data exclude those infants born alive after less than 28 weeks' gestation, of less than 1 000 grammes in weight and 35 centimetres in length, who die within 24 hours of birth.

[31] Excluding Greenland and Faeroe Islands, shown separately.

[32] Data include births to nationals temporarily outside country.

[33] Data include births among armed forces and their dependants outside country.

[34] Including data for East Berlin.

[35] Including stillbirths, numbering 4 388.

[36] Data include births among residents of the Federal Republic of Germany temporarily in West Berlin and exclude births among alien armed forces and non-resident civilians temporarily in the area.

[37] Data include births among residents of West Berlin temporarily in the Federal Republic of Germany and exclude births among alien armed forces stationed in the area and non-resident civilians temporarily in the area.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

[1] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[6] Age de la mère obtenu en retranchant son année de naissance de celle de l'enfant.

[30] Il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1 000 grammes, mesurant moins de 35 cm et décédés dans les 24 heures.

[31] Non compris le Groenland et les îles Féroé qui font l'objet de rubriques distinctes.

[32] Y compris les enfants nés de nationaux du pays temporairement à l'étranger.

[33] Y compris les naissances survenues dans les familles de militaires se trouvant à l'étranger.

[34] Y compris Berlin-Est.

[35] Y compris 4 388 mort-nés.

[36] Y compris les naissances survenues dans les familles de résidants de la République fédérale d'Allemagne se trouvant temporairement à Berlin-Ouest et non compris celles qui se sont produites dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement dans la République fédérale d'Allemagne.

[37] Y compris les naissances survenues dans les familles de résidants de Berlin-Ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris celles qui se sont produites dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement à Berlin-Ouest.

14. Live births by age of mother (continued)— Naissances vivantes selon l'âge de la mère (suite)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Data exclude deaths of infants dying before registration of birth.

[3] Excludes data for armed forces.

[4] Excludes deaths among armed forces but rate computed on population including military personnel.

[5] European, Indian and Coloured (mixed) population, together comprising about one per cent of the total.

[6] For European population only and not computed by the Statistical Office.

[7] Formerly Cameroons, a United Nations Trust Territory under French administration, declared independent 1 January 1960.

[8] Formerly Belgian Congo; declared independent 30 June 1960.

[9] Prior to 1957, data include late foetal deaths.

[10] Estimated rate obtained from results of annual demographic sample survey; corresponding registered rate for Congo in 1953 was 13.4.

[11] Data are for a compulsory registration area of 36 towns and townships which comprises about 12 per cent of total population and is not representative of Ghana. Except for 1951, rates not computed by the Statistical Office of the United Nations.

[12] For registration area only; registration in rest of country incomplete.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[3] Non compris les forces armées.

[4] Non compris les décès de militaires; taux calculé sur la base d'un chiffre de population qui comprend les militaires.

[5] Européens, personnes d'origine indienne et personnes de couleur (métis) représentant ensemble 1 pour cent environ de la population totale.

[6] Population européenne seulement. Le calcul de ce taux n'a pas été fait au Bureau de statistique des Nations Unies.

[7] Anciennement Territoire sous tutelle du Cameroun sous administration française, proclamé indépendant le 1er janvier 1960.

[8] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.

[9] Pour les années antérieures à 1957, y compris les morts fœtales tardives.

[10] Taux estimatif obtenu à partir des résultats d'une enquête démographique annuelle par sondage; pour le Congo en 1953, le taux correspondant calculé d'après les données de l'enregistrement est de 13,4.

[11] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative de l'ensemble du Ghana. Sauf pour 1951, le calcul des taux n'a pas été fait au Bureau de statistique des Nations Unies.

[12] Zone d'enregistrement seulement; enregistrement incomplet dans le reste du pays.

15. Décès et taux bruts de mortalité : 1950–1959

[Les taux représentent le nombre de décès pour 1 000 habitants. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Les données ne comprennent pas les morts foetales. Voir explications à la page 90.]

[13] Estimated rate based on results of 1955 demographic sample survey of residents but computed on total population, including non-residents.
[14] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Ivory Coast, 7 August, and Senegal, 20 June.
[15] Estimated rate for indigenous rural population, obtained from results of 1957-58 demographic sample survey of 69 villages.
[16] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.
[17] For indigenous population only.
[18] Northern part of former Spanish Protectorate.
[19] Data exclude deaths of infants dying within 24 hours of birth.
[20] Civil registration system for Moslem population introduced 1 July 1954.
[21] The former French Protectorate. Rates computed on estimates of population which exclude personnel in military establishments.
[22] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development as measured by educational level, language used and mode of living.
[23] Former British dependency; declared independent 1 October 1960.
[24] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[25] Estimated rate obtained from results of 1950 demographic sample survey.

[13] Taux estimatif obtenu à partir des résultats de l'enquête démographique par sondage de 1955 sur les résidants; toutefois, ce taux a pour base la population totale (y compris les non résidants).
[14] Ce pays, qui faisait précédemment partie de l'ancienne Afrique-Occidentale française est devenu à la fin de 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Côte d'Ivoire, 7 août et Sénégal, 20 juin.
[15] Taux concernant la population indigène rurale; ce taux a été obtenu à partir des résultats d'une enquête démographique par sondage effectuée en 1957-1958 dans 69 villages.
[16] Anciennement République malgache. Ce pays, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française a été proclamé indépendant le 25 juin 1960.
[17] Population indigène seulement.
[18] Partie nord de l'ancien Protectorat espagnol.
[19] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.
[20] Un système d'enregistrement des faits d'état civil pour la population musulmane est entré en vigueur le 1er juillet 1954.
[21] Ancien Protectorat français. Taux calculés sur la base d'un chiffre de population établi par estimation, qui ne comprend pas les militaires encasernés.
[22] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[23] Ancienne possession Britannique, proclamée indépendante le 1er octobre 1960.
[24] L'enregistrement n'est probablement complet que pour la population "civilisée", qui représente une fraction relativement faible de la population totale.
[25] Taux estimatif obtenu à partir des résultats de l'enquête démographique par sondage de 1950.

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Data exclude deaths of infants dying before registration of birth.

[10] Estimated rate obtained from results of annual demographic sample survey; corresponding registered rate for Congo in 1953 was 13.4.

[14] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and in 1960 declared independent on date indicated hereafter: Ivory Coast, 7 August, and Senegal, 20 June.

[19] Data exclude deaths of infants dying within 24 hours of birth.

[26] Estimated rate for village population obtained from results of 1953-55 demographic sample survey.

[27] Includes stillbirths.

[28] For Freetown only.

[29] Formerly known as Spanish Guinea and comprising African Provinces of Fernando Poo and Rio Muni.

[30] Including data for southern part of former Spanish Protectorate transferred to Morocco on 10 April 1958.

[31] Estimate obtained from results of 1955-56 sample census of population.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[10] Taux estimatif obtenu à partir des résultats d'une enquête démographique annuelle par sondage; pour le Congo belge en 1953, le taux correspondant calculé d'après les données de l'enregistrement est de 13,4.

[14] Ce pays, qui faisait précédemment partie de l'ancienne Afrique-Occidentale française est devenu à la fin de 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant en 1960 aux dates ci-après : Côte d'Ivoire, 7 août et Sénégal, 20 juin.

[19] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.

[26] Taux estimatif concernant la population des villages; ce taux a été obtenu à partir des résultats de l'enquête démographique par sondage de 1953-1955.

[27] Y compris les mort-nés.

[28] Freetown seulement.

[29] Anciennement Guinée espagnole. Comprend les provinces africaines de Fernando Poo et Rio Muni.

[30] Y compris la partie sud de l'ancien Protectorat espagnol, cédée au Maroc le 10 avril 1958.

[31] Estimation établie d'après les résultats du recensement de la population par sondage effectué en 1955-1956.

15. Décès et taux bruts de mortalité (suite)

[Voir note au début du tableau.]

[32] Formerly Togoland, a United Nations Trust Territory under French Administration; declared independent 27 April 1960.

[33] Marked increase observed in 1955 due to extension of civil registration facilities in 1954.

[34] Excluding Algerian refugees temporarily in the country, estimated at about 180 000 in 1959.

[35] Death registration among non-European population estimated to be about 50 per cent complete.

[36] Marked increase observed beginning 1953 due to extension of compulsory registration to natives (Bantu) in rural areas on 1 January 1952.

[37] Death registration estimated to be about 77 per cent complete.

[38] For localities having Health Bureaus, which comprised 44.6 per cent of total population in 1957.

[39] Excluding nomad population, estimated at 179 722 at the end of 1956 and Palestinian refugees, numbering 119 648 on 1 July 1959; for refugees excluded each year 1950-1956, see Table 4. Data are deaths registered within one month of occurrence; additional registrations made during year numbered 12 110 in 1959.

[39a] Registered rate; estimated rates for Afro-Arab population obtained from results of the 1958 population census are 21 for Zanzibar and 23 for Pemba.

[40] Excluding tourists and United Kingdom and United States armed forces and their dependants stationed in the area.

[41] Prior to 1956, data tabulated by year of registration rather than by year of occurrence.

[32] Anciennement Territoire sous tutelle du Togo sous administration française. Proclamé indépendant le 27 avril 1960.

[33] Les augmentations sensibles observées depuis 1955 s'expliquent par l'extension des services de l'état civil en 1954.

[34] Non compris les réfugiés algériens temporairement dans le pays, au nombre de 180 000 environ en 1959 (estimation).

[35] L'enregistrement saisirait environ 50 pour cent des décès de non-Européens.

[36] Les augmentations sensibles observées depuis 1953 s'expliquent par l'extension, le 1er janvier 1952, d'un système d'enregistrement obligatoire pour les indigènes (Bantous) des régions rurales.

[37] L'enregistrement saisirait 77 pour cent des décès environ.

[38] Données concernant les localités dotées d'un bureau d'hygiène, qui comprenaient 44,6 pour cent de la population totale en 1957.

[39] Non compris la population nomade, estimée à 179 722 personnes à la fin de 1956, ni les réfugiés de Palestine, au nombre de 119 648 au 1er juillet 1959; pour le nombre de réfugiés omis chaque année de 1950 à 1956, voir le tableau 4. Les données représentent les décès enregistrés dans le mois qui suit l'événement; 12 110 autres décès ont été enregistrés au cours de l'année 1959.

[39a] Taux provenant des données d'enregistrement. Taux estimatifs pour la population afro-arabe obtenus à partir des résultats du recensement de population de 1958 : 21 pour Zanzibar et 23 pour Pemba.

[40] Non compris les décès survenus parmi les touristes ni parmi les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leur famille les accompagnant.

[41] Pour les années antérieures à 1956, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

15. Deaths and crude death rates (continued)

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude deaths of infants dying before registration of birth.
[19] Data exclude deaths of infants dying within 24 hours of birth.
[42] Data include deaths of Canadian residents temporarily in the United States, but exclude deaths of United States residents temporarily in Canada.
[43] Published by the World Health Organization Regional Office for the Americas.
[44] Registration estimated to be 75-85 per cent complete.
[45] Beginning 1952, data include Netherlands Antilles residents outside the country if listed in Netherlands Antilles register, and exclude deaths of infants dying before registration of birth except for Curaçao since 1957.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[19] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.
[42] Y compris les décès de résidants canadiens se trouvant temporairement aux Etats-Unis, mais non compris les décès de résidants des Etats-Unis se trouvant temporairement au Canada.
[43] Chiffres publiés par l'Organisation mondiale de la santé (Bureau régional des Amériques).
[44] L'enregistrement saisirait de 75 à 85 pour cent des décès.
[45] A partir de 1952, y compris les décès de résidants néerlandais se trouvant hors du pays s'ils sont inscrits sur un registre de population néerlandais, mais non compris les décès d'enfants décédés avant leur naissance, excepté pour Curaçao depuis 1957.

15. Décès et taux bruts de mortalité (suite)

[46] Excluding data for Canal Zone, shown separately above. Prior to 1952, excluding tribal Indian population (numbering 48 654 in 1950). Beginning 1952, excluding tribal Indian population in Provinces of Bocas del Toro and Darién, where they constitute a relatively high proportion of the population (40.8 and 28.5 per cent, respectively).

[47] Prior to 1953, data tabulated by year of occurrence.

[48] Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.

[49] Estimated rate for population born in Brazil obtained from demographic analysis of 1940 and 1950 census returns.

[50] Excluding Amerindians, shown separately below.

[51] Data are burial permits.

[46] Non compris la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut). Pour les années antérieures à 1952, non compris les Indiens vivant en tribus (au nombre de 48 654 en 1950). A partir de 1952, non compris les Indiens vivant en tribus dans les provinces de Bocas del Toro et de Darién où représentent une fraction relativement importante de la population (40,8 et 28,5 pour cent respectivement).

[47] Pour les années antérieures à 1953, données exploitées selon l'année de l'événement.

[48] Pour les années antérieures à 1954, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[49] Taux estimatif obtenu à partir des résultats d'une analyse démographique des recensements de 1940 et de 1950 pour la population née au Brésil.

[50] Non compris les Amérindiens, qui font l'objet d'une rubrique distincte (voir plus bas).

[51] D'après les permis d'inhumer délivrés.

15. Deaths and crude death rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Data exclude deaths of infants dying before registration of birth.

[27] Includes stillbirths.

[52] Excluding Indian jungle population. Prior to 1955, data exclude deaths in Galápagos Islands and, prior to 1954, also those in Provinces of Napo Pastaza, Morona Santiago and Zamora Chinchipe, but rates are computed on total population.

[53] Registration estimated to be about 70 per cent complete. Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.

[54] Estimated from reports for 27 municipalities in which registration is believed to be complete.

[55] Excluding Indian jungle population, estimated at 350 000 in 1940.

[56] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1950-1958 and 38 000 in 1959.

[57] Excluding Indian jungle population, numbering 56 705 in 1950.

[58] Excludes deaths among armed forces and in port but rates computed on population including them.

[59] Official estimate; basis unknown.

[60] Numbering—for 1950-1959—49, 60, 62, 59, 62, 62, 74, 68, 62 and 50, respectively, and having a present population of approximately 2 million.

[61] For year ended April 1959, estimated from results of 1958-59 demographic sample survey in 345 villages.

[62] According to test of death registration, 89 per cent complete in 1953.

[63] Rates are estimated from results of surveys and reports from areas where registration is considered satisfactory. Released by State Statistical Bureau, Peking, 1958.

[64] Excluding armed forces and foreigners.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[27] Y compris les mort-nés.

[52] Il n'est pas tenu compte des Indiens de la jungle. Non compris les décès survenus dans les Iles Galapagos, pour les années antérieures à 1955, ni dans les Provinces de Napo Pastaza, de Morona Santiago et de Zamora Chinchipe, pour les années antérieures à 1954; toutefois, les taux ont été calculés sur la base de la population totale.

[53] L'enregistrement saisirait 70 pour cent des décès environ. Pour les années antérieures à 1954, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[54] Estimation officielle établie d'après les données fournies par 27 municipalités où l'on pense que l'enregistrement est complet.

[55] Non compris les Indiens de la jungle au nombre de 350 000 en 1940 (estimation).

[56] Non compris les noirs et les Indiens vivant en tribus: 26 000 personnes en 1950-1958 et 38 000 en 1959 (estimations).

[57] Non compris les Indiens de la jungle, au nombre de 56 705 en 1950.

[58] Non compris les décès de militaires et taux calculé sur la base d'un chiffre de population qui les comprend.

[59] Estimation officielle; base inconnue.

[60] Nombre de villes pour les années 1950-1959 : 49, 60, 62, 59, 62, 61, 74, 68, 62 et 50 respectivement; actuellement, la population totale de ces villes est d'environ 2 millions d'habitants.

[61] A la fin d'avril 1959, estimation établie sur la base des résultats d'une enquête démographique par sondage effectuée en 1958-1959 dans 345 villages.

[62] Un sondage a permis d'établir que 89 pour cent des décès ont été enregistrés en 1953.

[63] Taux estimatifs calculés à partir des rapports et résultats d'enquêtes concernant des zones où l'enregistrement est considéré comme satisfaisant. Source: Direction des statistiques, Pékin, 1958.

[64] Non compris les militaires ni les étrangers.

[65] Former British dependency; declared independent 16 August 1960. Excluding armed forces. Beginning 1955, data are official estimates which include an adjustment for incompleteness of reporting.
[66] Rates computed on population excluding armed forces.
[67] Estimated rate based on demographic analysis of 1941 and 1951 census returns.
[68] Estimated rates for rural India, obtained from 7th and 14th rounds of National Sample Survey.
[69] Data are for a changing group of states and territories which, in 1958, included a population of about 300 million.
[70] Death registration estimated to be about 69 to 72 per cent complete for period 1941-1950.
[71] Rates not computed by the Statistical Office of the United Nations.
[72] Data are for certain regencies in Java, numbering—for 1952-1959—59, 97, 86, 90, 99, 79, 94 and 97 respectively, and including, in 1959, a population of about 54 million.
[73] Registered rate; estimated 1953-1957 average rate, based on data for selected regencies where registration is believed to be fairly complete, is 18.8.
[74] Data are for year ended 21 December.
[75] Registered rate; estimated rate, based on demographic analysis of results of population and subsequent national sample survey in 40 towns and 300 villages, is 25.
[76] Death registration estimated to be about 60 per cent complete, and primarily urban in coverage.
[77] Prior to 1957, excluding Bedouin population in the Negev.
[78] Registration among non-Jewish population (226 000 in 1959) estimated to be less than 75 per cent complete.
[79] Data are for Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively.
[80] Excluding foreigners but including registered Palestinian refugees; for number of refugees, see Table 4.
[81] Registration estimated to be about 80 per cent complete.

[65] Ancienne possession britannique, proclamée indépendante le 16 août 1960. Non compris les militaires. A partir de 1955, estimations officielles, après ajustement destiné à compenser les lacunes de l'enregistrement.
[66] Taux calculés sur la base de la population non compris les forces armées.
[67] Taux estimatif obtenu à partir des résultats d'une analyse démographique des recensements de 1941 et de 1951.
[68] Taux estimatifs se rapportant à la population rurale de l'Inde; calculé à partir des résultats des 7ème et 14ème phases de l'enquête nationale par sondage.
[69] Les données se rapportent à un groupe variable d'Etats et de territoires qui, en 1958, comptaient 300 millions d'habitants environ.
[70] L'enregistrement des décès porterait sur environ 69 à 72 pour cent des décès survenus pendant la période 1941-1950.
[71] Le calcul de ce taux n'a pas été fait au Bureau de statistique des Nations Unies.
[72] Les données se rapportent à certaines régences de Java, dont le nombre pour les années 1952-1959 s'établit comme suit : 59, 97, 86, 90, 99, 79, 94 et 97 respectivement; en 1959, la population totale de ces régences était de 54 millions d'habitants environ.
[73] Taux établi d'après les données d'enregistrement; le taux estimatif moyen pour 1953-1957, calculé d'après des données relatives à certaines régences où l'on pense que l'enregistrement est relativement complet, est de 18,8.
[74] Les données se rapportent à des périodes annuelles se terminant le 21 décembre.
[75] Taux provenant de données d'enregistrement; le taux estimatif, d'après une analyse démographique des résultats du recensement de population de 1956 et d'une enquête ultérieure par sondage dans 40 villes et 300 villages, est de 25.
[76] L'enregistrement des décès porterait sur environ 60 pour cent des décès survenus principalement dans les régions urbaines.
[77] Pour les années antérieures à 1957, non compris les Bédouins du Négeb.
[78] L'enregistrement saisirait moins de 75 pour cent des décès pour la population non juive (226 000 personnes en 1959).
[79] Ne concerne que les nationaux japonais se trouvant au Japon. Pour la période antérieure à mai 1952, non compris l'archipel des Tokara et, pour les années antérieures à 1954, les îles Amami, détachées des îles Ryû-Kyû et rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953, respectivement.
[80] Non compris les étrangers mais y compris les réfugiés de Palestine immatriculés; pour leur nombre voir le tableau 4.
[81] L'enregistrement saisirait 80 pour cent des décès environ.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude deaths of infants dying before registration of birth.
[24] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[27] Includes stillbirths.
[71] Rates not computed by the Statistical Office of the United Nations.
[81] Registration estimated to be about 80 per cent complete.
[82] Data are for Korean nationals only.
[83] Data exclude deaths among non-resident foreigners and among registered Palestinian refugees. For number of refugees, see Table 4.
[84] Source: Release by Deputy Minister of Health.
[85] Estimated rate, based on demographic analysis of 1952-54, population census returns.
[86] Data are for a changing registration area which, in 1951, comprises about 92 per cent of total population.
[87] Data are incomplete returns; in 1951, 1952 and 1953, reports were received from only 66 per cent of local civil registrars; in 1956, 1957 and 1958 from 78, 81 and 84 per cent, respectively. Rates are computed on total population.
[88] Published by the United Nations Economic Commission for Asia and the Far East.
[89] Data exclude deaths among Allied military and civilian personnel and their dependants stationed in the area.
[90] Prior to 1955, data are tabulated by year of registration rather than by year of occurrence.
[91] Estimated rate, based on 6.2 per cent sample of population of 1 700 villages.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le Chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[24] L'enregistrement n'est probablement complet que pour la population "civilisée", qui représente une fraction relativement faible de la population totale.
[27] Y compris les mort-nés.
[71] Le calcul de ce taux n'a pas été fait au Bureau de statistique des Nations Unies.
[81] L'enregistrement saisirait 80 pour cent des décès environ.
[82] Ne concerne que les nationaux coréens.
[83] Il n'est pas tenu compte des décès survenus parmi les étrangers non résidants et parmi les réfugiés de Palestine immatricules. Pour le nombre de réfugiés, voir le tableau 4.
[84] Source : communiqué du Vice-Ministre de la santé.
[85] Taux estimatif obtenu à partir des résultats de l'analyse démographique d'un recensement de population de 1952-1954.
[86] Les données se rapportent à une zone d'enregistrement qui varie selon les années et qui comprend actuellement 92 pour cent de la population totale.
[87] Données incomplètes; en 1951, 1952 et 1953, des bulletins n'ont été reçus que de 66 pour cent des bureaux d'état civil; en 1956, 1957 et 1958, de 78, de 81 et de 84 pour cent respectivement. Les taux sont calculés sur la base de la population totale.
[88] Chiffre publié par la Commission économique des Nations Unies pour l'Asie et l'Extrême-Orient.
[89] Non compris les militaires et agents civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant.
[90] Pour les années antérieures à 1955, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[91] Taux estimatif basé sur un échantillon représentant 6,2 pour cent de la population de 1 700 villages.

15. Décès et taux bruts de mortalité (suite)

[92] Rates computed on population excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants.
[93] Beginning March 1957, data are for provincial capitals and district centers.
[94] Registered rate; rate estimated from demographic analysis of results of 1947 population census and 1956 Demographic and Economic Survey of Thailand, is 20.
[95] For March to December only.
[96] Prior to 1951, data are for 22 provinces and the Prefecture of Saigon; in 1956, data for Phuóc-long and Kien-phong provinces are excluded, in 1957 Darlac and Pleiku provinces, in 1958 Kontum and Pleiku provinces; and for 1959 Phuóc-thành, Binh-dinh, Darlac and Quáng-duc provinces and the city Huê.
[97] Data include armed forces stationed outside country, exclude alien armed forces stationed in the area.
[98] Beginning 1955, excluding data for dependencies of Guernsey.
[99] Beginning 1953, data exclude deaths of infants born alive after less than 28 weeks gestation, less than 1 000 grammes in weight and 35 centimetres in length, who die within 24 hours of birth.
[100] Excluding Faeroe Islands and Greenland shown separately.
[101] Including armed forces stationed outside country.
[102] Deaths for 1950 are for Finnish nationals in Finland only, but rate is computed on population which includes resident aliens; beginning 1951, including also data for nationals temporarily outside country.
[103] Data include deaths among alien armed forces stationed in the area and among national armed forces wherever stationed, but rates are computed on population excluding alien armed forces and members of career military service outside country, unless on duty in Germany or Austria.

[92] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les personnes de passage à bord de navires, ni les militaires et les agents civils domiciliés en dehors du territoire, ni les membres de leur famille les accompagnant.
[93] A partir de mars 1957, les données se rapportent aux capitales de provinces et aux chefs-lieux de districts.
[94] Taux établi d'après les données d'enregistrement; le taux estimatif, calculé à partir des résultats de l'analyse démographique du recensement de 1947 et de l'Enquête démographique et économique de 1956, est de 20.
[95] Mars-décembre seulement.
[96] Avant 1951, les données se rapportent à 22 provinces et à la Préfecture de Saigon; non compris, en 1956, les provinces de Phuóc-long et Kien-phong; en 1957, les provinces de Darlac et Pleiku; en 1958, les provinces de Kontum et Pleiku; et en 1959, les provinces de Phuóc-thành, Binh-dinh, Darlac et Quáng-duc et la ville de Huê.
[97] Y compris les militaires nationaux hors du pays, mais non compris les militaires étrangers en garnison sur le territoire.
[98] A partir de 1955, non compris les dépendances de Guernesey.
[99] A partir de 1953, il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1 000 grammes, mesurant moins de 35 centimètres et décédés dans les 24 heures qui ont suivi la naissance.
[100] Non compris les îles Féroé et le Groenland, qui font l'objet de rubriques distinctes.
[101] Y compris les décès de militaires hors du pays.
[102] Pour 1950 les décès ne concernent que les nationaux finlandais se trouvant en Finlande, mais les taux ont été calculés sur la base d'un chiffre de population comprenant les résidants étrangers; à partir de 1951 : y compris les nationaux finlandais se trouvant temporairement hors de Finlande.
[103] Y compris les décès de militaires étrangers en garnison sur le territoire et de militaires français où qu'ils soient en garnison; cependant, les militaires étrangers dans le pays et les militaires français de carrière en garnison hors du pays à l'exception de ceux qui font partie des forces d'occupation en Allemagne et en Autriche, ne sont pas compris, pour le calcul des taux, dans le chiffre de population auquel est rapporté le nombre des décès.

15. Deaths and crude death rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[41] Prior to 1956, data tabulated by year of registration rather than by year of occurrence.

[66] Rates computed on population excluding armed forces.

[104] Data include deaths among residents of the Federal Republic of Germany temporarily in West Berlin, exclude deaths among alien armed forces and non-resident civilians temporarily in the area.

[105] Data include deaths among residents of West Berlin temporarily in the Federal Republic of Germany and exclude deaths among alien armed forces and non-resident civilians temporarily in the area.

[106] Rates computed on population including armed forces stationed outside country and excluding alien armed forces stationed in the area.

[107] Data are deaths registered within one year of occurrence.

[108] Computed on population including armed forces and civilians stationed outside country.

[109] Data include deaths of armed forces stationed outside country and exclude those among non-Maltese armed forces in the area, but rates computed on population, excluding non-Maltese armed forces stationed in the area, and including civilian nationals temporarily outside country.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[41] Pour les années antérieures à 1956, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[66] Taux calculés sur la base de la population non compris les forces armées.

[104] Y compris les décès de résidants de la République fédérale d'Allemagne se trouvant temporairement dans Berlin-Ouest mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement sur le territoire.

[105] Y compris les décès de résidants de Berlin-Ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement dans Berlin-Ouest.

[106] Taux calculés sur la base d'un chiffre de population qui comprend les militaires nationaux hors du pays mais non les militaires étrangers en garnison sur le territoire.

[107] Décès enregistrés dans l'année qui suit l'événement.

[108] Taux calculés sur la base d'un chiffre de population qui comprend les militaires et les civils nationaux en poste hors du territoire.

[109] Y compris les décès de militaires nationaux hors du pays mais non compris les décès de militaires non maltais en garnison sur le territoire. Cependant, les taux sont calculés sur la base d'un chiffre de population qui ne comprend pas les militaires non maltais en garnison sur le territoire mais qui comprend les civils nationaux temporairement hors du territoire.

15. Décès et taux bruts de mortalité (suite)

[Voir note au début du tableau.]

[110] Including Netherlands residents outside country if listed in a Netherlands population register. Prior to 1959, excluding Amboynese living in camps.
[111] Excluding alien armed forces stationed in the area.
[112] Including Norwegian residents temporarily outside country.
[113] Data tabulated by date of occurrence for England and Wales and by date of registration for Northern Ireland and Scotland.
[114] Computed on population including merchant seamen at sea.
[115] Excluding full-blooded aborigines, estimated at 39 319 in June 1954.
[116] Prior to 1958, data are for years ended 31 March.
[117] Including data for the condominium of Canton and Enderbury Islands.
[118] Except for 1950 and 1959, rates computed on population excluding United States military personnel, their dependants and contract employees.
[119] Rates based on deaths for years ended 30 June and computed on population for years ended 31 December of the previous year.

[110] Y compris les décès de résidants néerlandais survenus hors du pays, à condition qu'ils aient été inscrits sur un registre de population néerlandais. Avant 1959, non compris les Amboynais vivant dans des camps.
[111] Non compris les décès de militaires étrangers en garnison sur le territoire.
[112] Y compris les décès de résidants norvégiens se trouvant temporairement hors du pays.
[113] Les données sont exploitées selon l'année de l'événement pour l'Angleterre et le Pays de Galles (sauf pour 1949) et selon l'année de l'enregistrement pour l'Irlande du Nord et l'Ecosse.
[114] Calcul effectué sur la base d'un chiffre de population qui comprend les équipages de la marine marchande en mer.
[115] Non compris les aborigènes purs, au nombre de 46 638 en juin 1947 (estimation).
[116] Pour les années antérieures à 1958, les données se rapportent à des périodes annuelles se terminant le 31 mars.
[117] Y compris le condominium des îles Canton et Enderbury.
[118] A l'exception de 1950 et 1959, taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires des Etats-Unis et les membres de leur famille les accompagnant, ni les agents contractuels des Etats-Unis.
[119] Taux calculés sur la base d'un chiffre des décès qui se rapporte à des périodes annuelles se terminant le 30 juin et d'un chiffre de population qui se rapporte à des périodes annuelles se terminant le 31 décembre de l'année précédente.

15. Deaths and crude death rates (continued)

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[48] Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.
[71] Not computed by the Statistical Office of the United Nations.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[48] Pour les années antérieures à 1954, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[71] Le calcul de ce taux n'a pas été fait au Bureau de statistique des Nations Unies.

15. Décès et taux bruts de mortalité (suite)

[Voir note au début du tableau.]

[81] Registration estimated to be about 80 per cent complete.
[111] Excluding alien armed forces stationed in the area.
[120] Excluding United States military personnel, their dependants and contract employees. 1950-1952: Excluding Rota. 1954: Excluding Rota and outlying islands of the Yap district.
[121] Beginning 1953, data are for Tongan population only.
[122] Prior to 1954, data include stillbirths among Samoan population.
[123] For year ended 31 March.
[124] For Samoan population only.

[81] L'enregistrement saisirait 80 pour cent des décès environ.
[111] Non compris les décès de militaires étrangers en garnison sur le territoire.
[120] Non compris les militaires des Etats-Unis et les membres de leur famille les accompagnant, ni les agents contractuels des Etats-Unis. 1950-1952, non compris Rota. 1954 : non compris Rota ni les îles périphériques du district de Yap.
[121] A partir de 1953, les données ne concernent que les Tongans.
[122] Pour les années antérieures à 1954, y compris les mort-nés samoans.
[123] Pour la période annuelle terminée le 31 mars.
[124] Ne concerne que les Samoans.

16. Infant deaths and infant mortality rates : 1950–1959

[Rates are the number of deaths of infants under 1 year of age per 1 000 live births. Italics indicate that data are unreliable (incomplete) or of unknown completeness. Data exclude foetal deaths. For discussion, see page 40.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[3] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development as measured by educational level, language used and mode of living.
[4] Formerly Belgian Congo; declared independent 30 June 1960.
[5] Estimated average rate for 1950-52 obtained from results of annual demographic sample survey.
[6] Prior to 1957, infant deaths include late foetal deaths, but rates are computed on live births.
[7] Data are for a compulsory registration area of 36 towns and townships which comprises about 12 per cent of total population and is not representative of Ghana.
[8] For registration area only; registration in rest of country incomplete.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[3] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[4] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[5] Taux estimatif moyen pour 1950-1952 obtenu à partir des résultats d'une enquête démographique annuelle par sondage.
[6] Pour les années antérieures à 1957, les nombres absolus comprennent les mort-nés, mais les taux sont calculés sur la base des naissances vivantes.
[7] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative de l'ensemble du Ghana.
[8] Zone d'enregistrement seulement; enregistrement incomplet dans le reste du pays.

16. Décès d'enfants de moins d'un an et taux de mortalité infantile : 1950–1959

[Les taux représentent le nombre de décès d'enfants de moins d'un an pour 1 000 naissances vivantes. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Les données ne comprennent pas les morts foetales. Voir explications à la page 90.]

[9] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French community; declared independent 25 June 1960.
[10] Northern part of former Spanish Protectorate.
[11] Data exclude live-born infants dying within 24 hours of birth.
[12] Marked increase beginning 1954 due to extension of civil registration system for Moslem population, 1 July 1954.
[13] The former French Protectorate.
[14] Former British dependency; declared independent, October 1960.
[15] For indigenous population only.
[16] Estimated rate obtained from results of 1950 demographic sample survey.
[17] Estimated rate for village population obtained from results of 1953-55 demographic sample survey.
[18] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French community and declared independent on 20 June 1960.
[19] Infant deaths include late foetal deaths, but rates are computed on live births.
[20] For Freetown only.
[21] Formerly known as Spanish Guinea, and comprising African Provinces of Fernando Poo and Rio Muni.

[9] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.
[10] Partie nord de l'ancien Protectorat espagnol.
[11] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.
[12] Les augmentations sensibles observées depuis 1954 s'expliquent par l'extension, le 1er juillet 1954, d'un système d'enregistrement des faits d'état civil pour la population musulmane.
[13] Ancien Protectorat français; les données représentent les décès de non Marocains.
[14] Ancienne possession britannique; proclamée indépendante le 1er octobre 1960.
[15] Population indigène seulement.
[16] Taux estimatif obtenu à partir des résultats de l'enquête démographique par sondage de 1950.
[17] Taux estimatif concernant la population des villages; ce taux a été obtenu à partir des résultats de l'enquête démographique par sondage de 1953-55.
[18] Ce pays qui faisait partie de l'ancienne Afrique-Occidentale française est devenu à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 20 juin 1960.
[19] Les nombres absolus comprennent les mort-nés, mais les taux sont calculés sur la base des naissances vivantes.
[20] Freetown seulement.
[21] Anciennement Guinée espagnole. Comprend les provinces africaines de Fernando Poo et Rio Muni.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[22] Estimate, obtained from results of 1955-56 sample census of population.
[23] For localities having Health Bureaus which comprised 44.6 per cent of total population in 1957.
[24] Infant death registration estimated to be about 70 per cent complete.
[25] Excluding data for nomad population estimated at 179 722 at the end of 1956 and Palestinian refugees numbering 119 648 on 1 July 1959; for refugees excluded each year 1950-1957, see Table 4. Data are events registered within one month of occurrence.
[25a] Registered rate. Estimated rates for Afro-Arab population obtained from results of 1958 population census are 157 for Zanzibar and 171 for Pemba.
[26] Data exclude events among tourists and among United Kingdom and United States armed forces and their dependants stationed in the area.
[27] Prior to 1956, data are tabulated by year of registration rather than by year of occurrence.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[22] Estimation établie d'après les résultats du recensement de la population par sondage effectué en 1955-56.
[23] Données concernant les localités dotées d'un bureau d'hygiène, qui comprenaient 44,6 pour cent de la population totale en 1957.
[24] La complétude de l'enregistrement des décès d'enfants de moins de 1 an a été estimée à 70 pour cent.
[25] Non compris la population nomade, estimée à 179 722 personnes à la fin de 1956, ni les réfugiés de Palestine, au nombre de 119 648 au 1er juillet 1959; pour le nombre de réfugiés omis chaque année de 1950 à 1957, voir le Tableau 4. Les données représentent les décès enregistrés dans le mois qui suit l'événement.
[25a] Taux provenant des données d'enregistrement. Taux estimatifs pour la population afro-arabe obtenus à partir des résultats du recensement de population de 1958 : 157 pour Zanzibar et 171 pour Pemba.
[26] Non compris les décès survenus parmi les touristes ni dans les familles des militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire.
[27] Pour les années antérieures à 1956, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

16. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note au début du tableau.]

[28] Data include events among Canadian residents temporarily in the United States, but exclude events among United States residents temporarily in Canada.

[29] Rates computed on live births registered from 1950 to 1959, but tabulated by year of occurrence. For completeness of birth registration, see Table 13.

[30] Computed on live births tabulated by date of occurrence.

[31] For indigenous population only, and infant deaths include late foetal deaths.

[32] Infant death registration estimated to be 50-60 per cent complete; birth registration, 85-90 per cent complete.

[33] Data exclude live-born infants dying before registration of birth, except for Curaçao since 1957; beginning 1952, include events among Netherlands Antilles residents outside islands if listed in Netherlands Antilles population register.

[34] For Aruba, Bonaire and Curaçao only.

[35] Excluding data for Canal Zone shown separately above. Prior to 1952, excluding tribal Indian population (numbering 48 654 in 1950). Beginning 1952, including tribal Indian population in provinces of Bocas del Toro and Darién where they constitute a relatively high proportion of the total population (40.8 and 28.5 per cent, respectively).

[28] Y compris les décès de résidants canadiens se trouvant temporairement aux Etats-Unis, mais non compris les décès de résidants des Etats-Unis se trouvant temporairement au Canada.

[29] Taux calculés sur la base des naissances vivantes enregistrées de 1949 à 1958, mais classées selon l'année de l'événement. Pour tous renseignements sur la complétude de l'enregistrement des naissances, voir le Tableau 9.

[30] Sur la base des naissances vivantes classées selon la date de l'événement.

[31] Population indigène seulement, y compris les morts fœtales tardives.

[32] La complétude de l'enregistrement a été estimée à 50-60 pour cent pour les décès d'enfants de moins de 1 an et à 85-90 pour cent pour les naissances.

[33] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance à l'exception de Curaçao depuis 1957; à partir de 1952, y compris les habitants des Antilles néerlandaises se trouvant hors des îles s'ils étaient inscrits sur un registre de population des Antilles néerlandaises.

[34] Pour Aruba, Bonaire et Curaçao seulement.

[35] Non compris la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut). Pour les années antérieures à 1952, non compris les Indiens vivant en tribus (au nombre de 48 654 en 1950). A partir de 1952, y compris les Indiens vivant en tribus dans les provinces de Bocas del Toro et de Darién où ils représentent une fraction relativement importante de la population (40,8 et 28,5 pour cent respectivement).

16. Infant deaths and infant mortality rates (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Data exclude live-born infants dying before registration of birth.
[36] Prior to 1954, data are tabulated by year of registration rather than by year of occurrence.
[37] Estimated rate for population born in Brazil obtained from demographic analysis of 1940 and 1950 census returns.
[38] Excluding Amerindians, shown separately below.
[39] Rates computed on live births which have been adjusted for underregistration; for details, see Table 13.
[40] Infant deaths are number of burial permits and rates are computed on number of baptisms recorded in church registers.
[41] Excluding Indian jungle population. Prior to 1955, excluding Galapagos Islands and prior to 1954, also Provinces of Napo Pastaza, Morona Santiago and Zamora Chinchipe. Rates computed on live births excluding live-born infants dying within 24 hours of birth.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[36] Pour les années antérieures à 1954, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[37] Taux estimatif obtenu à partir des résultats d'une analyse démographique des recensements de 1940 et de 1950 pour la population née au Brésil.
[38] Non compris les Amérindiens, qui font l'objet d'une rubrique distincte (voir plus bas).
[39] Taux calculés d'après le nombre des naissances vivantes ajusté pour tenir compte des lacunes de l'enregistrement. Pour plus de détails, voir le Tableau 13.
[40] Le nombre des décès d'enfants de moins de 1 an est celui des permis d'inhumer; taux calculés d'après le nombre des baptêmes inscrits sur les registres des églises.
[41] Il n'est pas tenu compte des Indiens de la jungle. Non compris les décès survenus dans les îles Galapagos, pour les années antérieures à 1955, ni dans les provinces de Napo Pastaza, de Morona Santiago et de Zamora Chinchipe, pour les années antérieures à 1954. Les taux ont été calculés d'après les naissances vivantes, non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.

16. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note au début du tableau.]

[42] Infant death registration estimated to be approximately 70 per cent complete. Prior to 1954, data tabulated by year of registration rather than by year of occurrence.
[43] Published by the World Health Organization Regional Office for the Americas.
[44] Beginning 1951, data are for an area covered by 44 Health Units and 76 Health "Posts".
[45] Excluding Indian jungle population estimated at 350 000 in 1940.
[46] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1949-1957.
[47] Excluding Indian jungle population, numbering 56 705 in 1950.
[48] Numbering—for 1950-1959—49, 60, 62, 59, 62, 61, 74, 68, 60 and 50, respectively, and having a present population of approximately 2 million.
[49] Excluding foreigners.
[50] Former British dependency declared independent 16 August 1960. Beginning 1955, data are official estimates which include an adjustment for incompleteness of reporting.
[51] Estimated rate based on demographic analysis of 1941 and 1951 census returns.
[52] Data are for a changing group of states and territories which, in 1958, included a population of about 300 million.

[42] La complétude de l'enregistrement des décès d'enfants de moins de 1 an a été estimée à 70%. Pour les années antérieures à 1954, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[43] Chiffres publiés par l'Organisation mondiale de la santé (Bureau régional des Amériques).
[44] A partir de 1951, les données se rapportent à une région desservie par 44 centres sanitaires et 76 postes sanitaires.
[45] Non compris les Indiens de la jungle au nombre de 350 000 en 1940 (estimation).
[46] Non compris les noirs et les Indiens vivant en tribus : 26 000 personnes en 1949-1957 (estimation).
[47] Non compris les Indiens de la jungle, au nombre de 56 705 en 1950.
[48] Nombre de villes pour les années 1950-1959 : 49, 60, 62, 59, 62, 61, 74, 68, 60 et 50 respectivement; actuellement, la population totale de ces villes est d'environ 2 millions d'habitants.
[49] Non compris les décès survenus parmi les étrangers.
[50] Ancienne possession britannique proclamée indépendante le 16 août 1960. A partir de 1955, estimations officielles établies compte tenu d'un ajustement pour sous-dénombrement.
[51] Taux estimatif obtenu à partir des résultats d'une analyse démographique des recensements de 1941 et de 1951.
[52] Les données se rapportent à un groupe variable d'Etats et de territoires qui, en 1958, comptaient 300 millions d'habitants environ.

16. Infant deaths and infant mortality rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Data exclude live-born infants dying before registration of birth.

[19] Infants deaths include late foetal deaths, but rates are computed on live births.

[53] Official estimate; basis unknown.

[54] Data are for certain regencies in Java only, numbering—1952-1959—35, 73, 68, 73, 76, 79, 94 and 97, respectively, and including in 1959 a population of about 54 million.

[55] Registered rate; estimated rate for 1953-57 based on data for selected regencies where registration is believed to be fairly complete, is 150.

[56] Prior to 1957, excluding Bedouin population in the Negev.

[57] Infant death registration among non-Jewish population (226 000 in 1959) estimated to be less than 75 per cent complete.

[58] Data are for Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953 respectively.

[59] Excluding data for foreigners except for registered Palestinian refugees; for number of refugees, see Table 4.

[60] Data are for a changing registration area, which, in 1951, comprises about 92 per cent of total population.

[61] Data are incomplete returns; in 1951, 1952 and 1953, reports were received from only 65.6 per cent of local civil registrars; in 1956, 1957, and 1958, from 77.8, 80.5, and 83.9 per cent respectively.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[19] Les nombres absolus comprennent les mort-nés, mais les taux sont calculés sur la base des naissances vivantes.

[53] Estimation officielle; base inconnue.

[54] Les données se rapportent à certaines régences de Java, dont le nombre pour les années 1952-1959 s'établit comme suit : 35, 73, 68, 73, 76, 79, 94 et 97 respectivement; en 1959, la population totale de ces régences était de 54 millions d'habitants environ.

[55] Taux établi d'après les données d'enregistrement; le taux estimatif pour 1953-57, calculé d'après les données relatives à certaines régences où l'on pense que l'enregistrement est relativement complet, est de 150.

[56] Pour les années antérieures à 1957, non compris les Bédouins du Négeb.

[57] La complétude de l'enregistrement des décès d'enfants de moins de 1 an dans la population non juive (226 000 personnes en 1959) a été estimée à moins de 75 pour cent.

[58] Ne concerne que les nationaux japonais se trouvant au Japon. Pour la période antérieure à mai 1952, non compris l'archipel des Tokara et, pour les années antérieures à 1954, les îles Amami, détachées des îles Ryû-Kyû et rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953, respectivement.

[59] Non compris les étrangers sauf les réfugiés de Palestine immatriculés; pour leur nombre, voir le Tableau 4.

[60] Les données se rapportent à une zone d'enregistrement qui varie selon les années et qui comprend en 1951 actuellement 92 pour cent de la population totale.

[61] Données incomplètes; en 1951, 1952 et 1953, des bulletins n'ont été reçus que de 65,6 pour cent des bureaux d'état civil, en 1956, 1957, et 1958, de 77,8, de 80,5 et de 83,9 pour cent respectivement.

16. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note au début du tableau.]

[62] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.

[63] Data exclude infant deaths among Allied military and civilian personnel and their dependents stationed in the area.

[64] Prior to 1955, data are tabulated by year of registration rather than by year of occurrence.

[65] Estimated rate, based on 6.2 per cent sample of population in 1 700 villages.

[66] Beginning 1953, rates computed on live births tabulated by date of occurrence.

[67] Beginning 1957, also including data for District centers.

[68] For March to December only.

[69] Prior to 1956, data are for 22 provinces and the Prefecture of Saigon; in 1956, data for Phuóc-long and Kien-phong provinces and Phu-quoc delegation are excluded, in 1957, Darlac, Pleiku and Phuóc-long provinces, in 1958 Kontum and Pleiku provinces, and in 1959, Phuóc-thành, Bình-dinh, Darlac and Quáng-duc provinces and the city Huê.

[70] Computed on live births which include those in Phu-quoc delegation in 1956 and in Phuóc-long province in 1957.

[71] Excludes data for dependencies of Guernsey.

[72] Beginning 1953, data exclude infants born alive after less than 28 weeks' gestation, less than 1 000 grammes in weight and 35 centimetres in length, who die within 24 hours of birth.

[73] Excluding Faeroe Islands and Greenland, shown separately.

[74] For 1950, data are for Finnish nationals in Finland only; beginning 1951, including also data for nationals temporarily outside country.

[75] Data include events among residents of the Federal Republic of Germany temporarily in West Berlin, and exclude those among alien armed forces and non-resident civilians temporarily in the area.

[62] L'enregistrement ne serait complet que pour la population civilisée, qui représente une fraction relativement faible de la population totale.

[63] Non compris les décès d'enfants de moins d'un an dans les familles des militaires et agents civils alliés en poste sur le territoire.

[64] Pour les années antérieures à 1955, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[65] Taux estimatif d'après un enchantillon de 6,2 pour cent de la population de 1 700 villages.

[66] A partir de 1953, taux calculés d'après les naissances vivantes classées selon la date de l'événement.

[67] A partir de 1957, y compris aussi les chefs-lieux de districts.

[68] Mars-décembre seulement.

[69] Avant 1956, les données se rapportent à 22 provinces et à la Préfecture de Saigon; non compris, pour 1956, les provinces de Phuóc-long et Kien-phong et la délégation de Phu-quoc; pour 1957, les provinces de Darlac, Pleiku et Phuóc-long; pour 1958, les provinces de Kontum et Pleiku; et, pour 1959, les provinces de Phuóc-thành, Binh-dinh, Darlac et Quáng-duc et la ville de Hué.

[70] Calculé sur la base des naissances vivantes; y compris, en 1956, la délégation de Phu-quoc et, en 1957, la province de Phuóc-long.

[71] Non compris les dépendances de Guernesey.

[72] A partir de 1953, il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1 000 grammes, mesurant moins de 35 centimètres et décédés dans les 24 heures qui ont suivi la naissance.

[73] Non compris les îles Féroé et le Groenland, qui font l'objet de rubriques distinctes.

[74] Pour 1950, les données ne concernent que les nationaux finlandais se trouvant en Finlande; à partir de 1951 : y compris les nationaux finlandais se trouvant temporairement hors de Finlande.

[75] Y compris les décès de résidants de la République fédérale d'Allemagne se trouvant temporairement dans Berlin-Ouest mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement sur le territoire.

16. Infant deaths and infant mortality rates (continued)

USSR [89]	C	...	...	...	...	...	...	...	...	...	...

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[27] Prior to 1956, data are tabulated by year of registration rather than by year of occurrence.
[39] Rates computed on live births which have been adjusted for underregistration; for details, see Table 13.
[76] Data include events among residents of West Berlin temporarily in the Federal Republic of Germany, and exclude those among alien armed forces and non-resident civilians temporarily in the area.
[77] Data are events registered within one year of occurrence.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[27] Pour les années antérieures à 1956, données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[39] Taux calculés d'après le nombre des naissances vivantes ajusté pour tenir compte des lacunes de l'enregistrement. Pour plus de détails, voir le Tableau 13.
[76] Y compris les décès de résidants de Berlin-Ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement dans Berlin-Ouest.
[77] Décès enregistrés dans l'année qui suit l'événement.

16. Décès d'enfants de moins d'un an et taux de mortalité infantile (suite)

[Voir note au début du tableau.]

[78] Data include events among Netherlands residents outside country if listed in a Netherlands population register. Prior to 1959, excluding Amboynese living in camps.
[79] Data include deaths among Norwegian residents temporarily outside country.
[80] Data are tabulated by date of occurrence for England and Wales and by date of registration for Northern Ireland and Scotland.
[81] Excluding full-blooded aborigines, estimated at 39 319 in June 1954.
[82] Prior to 1958, data are for years ended 31 March.
[83] Including data for Canton and Enderbury Islands.
[84] Data exclude events among United States military personnel, their dependants and contract employees.
[85] For indigenous population only, and data relate to year ended 30 June.
[86] Excludes data for Rota and outlying islands of the Yap district.
[87] Beginning 1953, data are for Tongan population only.
[88] Prior to 1952, data are for Samoan population only. Prior to 1954, data include stillbirths among Samoan population.
[89] Rates not computed by the Statistical Office of the United Nations.

[78] Y compris les décès de résidants néerlandais survenus hors du pays, à condition qu'ils aient été inscrits sur un registre de population néerlandais. Pour les années antérieures à 1959, non compris les Amboinais vivant dans des camps.
[79] Y compris les décès de résidants norvégiens se trouvant temporairement hors du pays.
[80] Les données sont exploitées selon l'année de l'événement pour l'Angleterre et le Pays de Galles et selon l'année de l'enregistrement pour l'Irlande du Nord et l'Ecosse.
[81] Non compris les aborigènes purs, au nombre de 39 319 en juin 1954 (estimation).
[82] Pour les années antérieures à 1958, les données se rapportent à des périodes annuelles se terminant le 31 mars.
[83] Y compris le condominium des îles Canton et Enderbury.
[84] Non compris les décès survenus dans les familles des militaires des Etats-Unis et des agents contractuels des Etats-Unis.
[85] Les données ne concernent que la population indigène et se rapportent à une période annuelle terminée le 30 juin.
[86] Non compris Rota ni les îles périphériques du district de Yap.
[87] A partir de 1953, les données ne concernent que les Tongans.
[88] Pour les années antérieures à 1952, les données ne concernent que les Samoans. Pour les années antérieures à 1954, y compris les mort-nés samoans.
[89] Le calcul de ce taux n'a pas été fait au Bureau de statistique des Nations Unies.

17. Late foetal deaths and late foetal death ratios : 1950–1959

["Late foetal deaths" are those of at least 28 weeks' gestation. Foetal deaths of unknown gestational age are included. Ratios are the number of late foetal deaths per 1 000 live births. Reliability and comparability of data known to be greatly affected by incomplete or irregular registration of foetal deaths, and/or live births, and by variations in definitions. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For evaluation of completeness of registration of live births, see Table 13; for foetal death definitions, see discussion, page 41.]

Italics: Data are unreliable or of unknown completeness.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[2] Live-born infants dying before registration of birth are included among late foetal deaths but are excluded from live births used in the computation of ratios.

[3] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.

[4] Formerly Belgian Congo; declared independent 30 June 1960.

[5] Data are for a compulsory registration area of 36 towns and townships, which comprise about 12 per cent of total population and are not representative of Ghana.

[6] Not computed by the Statistical Office of the United Nations.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

† Données classées selon l'année de l'enregistrement et non de l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[2] Il est tenu compte des enfants nés vivants décédés avant l'enregistrement de leur naissance pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert au calcul des rapports.

[3] L'enregistrement n'est probablement complet que pour la population civilisée qui représente une fraction relativement faible de la population totale.

[4] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.

[5] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative de l'ensemble du Ghana.

[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.

17. Morts foetales tardives et rapports de mortinalité : 1950–1959

[Les "morts foetales tardives" sont celles qui surviennent après 28 semaines de gestation au moins. Les données du présent tableau comprennent les morts foetales survenues après une gestation de durée inconnue. Les rapports représentent le nombre de morts foetales tardives pour 1 000 naissances vivantes. La qualité et la comparabilité des données sont considérablement réduites en raison de l'enregistrement incomplet ou irrégulier des morts foetales et/ou des naissances vivantes, et du manque d'uniformité dans les définitions. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. On trouvera au tableau 13 des renseignements sur le degré de complétude de l'enregistrement des naissances vivantes. A propos de la définition de la mort foetale, voir explications à la page 92.]

[7] Shown previously as Malagasy Republic. At end of 1958, became internally autonomous republic within French Community; declared independent 25 June 1960.
[8] Northern part of former Spanish Protectorate.
[9] Live-born infants dying within 24 hours of birth are included among late foetal deaths but are excluded from live births used in computation of ratios.
[10] Former French Protectorate.
[11] Population which has achieved a prescribed degree of material and social development, as measured by educational level, language used and mode of living.
[12] Data are deaths of foetuses of 6 or more months' gestation.
[13] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and declared independent on 20 June 1960.
[14] For Freetown only.
[15] Formerly known as Spanish Guinea and comprising African Provinces of Fernando Póo and Rio Muni.

[7] Précédemment République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.
[8] Partie nord de l'ancien Protectorat espagnol.
[9] Il est tenu compte des enfants nés vivants décédés dans les 24 heures pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert aux calculs des rapports.
[10] Ancien Protectorat français.
[11] Population ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[12] Morts fœtales survenues après 6 mois de gestation au moins.
[13] Ce territoire qui faisait précédemment partie de l'Afrique Equatoriale française est devenu à la fin de 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 20 juin 1960.
[14] Freetown seulement.
[15] Anciennement Guinée espagnole; ce territoire comprend les provinces africaines de Fernando Póo et Rio Muni.

17. Late foetal deaths and late foetal death ratios (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Live-born infants dying before registration of birth are included among late foetal deaths but are excluded from live births used in the computation of ratios.
[12] Data are deaths of foetuses of 6 or more months' gestation.
[16] Data exclude events among tourists and among United Kingdom and United States armed forces and their dependants stationed in the area.
[17] Prior to 1956, data are by year of registration rather than by year of occurrence.
[18] Data include events among Canadian residents temporarily in the United States, but exclude events among United States residents temporarily in Canada.
[19] For deaths of foetuses of 5 or more months' gestation.
[20] Except for 1955 and 1957-1959, data are all foetal deaths, irrespective of gestational age. Ratios computed on live births registered during the period 1950-1959, tabulated by year of occurrence; for completeness of birth registration, see Table 13.
[21] Computed on live births tabulated by date of occurrence.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non de l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Il est tenu compte des enfants nés vivants décédés avant l'enregistrement de leur naissance pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert au calcul des rapports.
[12] Morts fœtales survenues après 6 mois de gestation au moins.
[16] Non compris les morts fœtales tardives survenues parmi les touristes ni dans les familles des militaires britanniques et américains en garnison sur le territoire.
[17] Pour les années antérieures à 1956, données classées selon l'année de l'enregistrement et non selon l'année de l'événement.
[18] Y compris les morts fœtales tardives survenues parmi les résidants canadiens se trouvant temporairement aux Etats-Unis mais non compris celles qui se sont produites parmi les résidants des Etats-Unis se trouvant temporairement au Canada.
[19] Morts fœtales survenues après 5 mois de gestation au moins.
[20] Sauf pour 1955 et 1957-1959, ensemble des morts fœtales quelle que soit la durée de gestation. Rapports calculés sur la base des naissances vivantes enregistrées au cours de la période 1950-1959, classées selon l'année de l'événement. Pour la complétude de l'enregistrement des naissances, voir le tableau 13.
[21] Rapports calculés sur la base des naissances vivantes classées selon l'année de l'événement.

17. Morts foetales tardives et rapports de mortinalité (suite)

...	...	...	12.8	27.0	...	18.2	22.1	* 23.7	...	Population amérindienne
36.3	35.2	36.1	33.6	32.3	31.0	30.4	29.9	* 26.6	* 26.4	Chili [34]

[22] Data are by year of registration rather than by year of occurrence.
[23] Registration estimated to be only 25-30 per cent complete.
[24] Except for Curaçao, beginning 1957, live-born infants dying before registration of births are included among late foetal deaths but are excluded from live births used in computation of ratios.
[25] Beginning 1954, ratios computed on births which include events occurring outside the islands if one or both parents are listed in Netherlands Antilles register.
[26] For Aruba, Bonaire, and Curaçao only.
[27] Data are all foetal deaths irrespective of gestational age, although compulsory registration is required only for foetal deaths of 28 or more weeks' gestation.
[28] Excluding tribal Indian population, numbering 48 654 in 1950, and also data for Canal Zone shown separately above.
[29] Corresponding ratios for foetuses of 28 or more weeks' gestation are 12.9 for 1950; 13.2 for 1951 and 16.5 for 1958.
[30] Excludes data for Alaska and Hawaïi.
[31] Prior to 1954, data are by year of registration rather than by year of occurrence.
[32] Beginning 1952, excluding Amerindians, shown separately.
[33] Except data for Amerindians, which are unreliable (incomplete).
[34] Ratios computed on live births which have been adjusted for underregistration; for details, see Table 13.

[22] Données classées selon l'année de l'enregistrement et non l'année de l'évènement.
[23] La complétude de l'enregistrement est estimée à 25 ou 30 pour cent seulement.
[24] A partir de 1957, sauf pour Curaçao, il est tenu compte des enfants nés vivants décédés avant l'enregistrement de leur naissance pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert au calcul des rapports.
[25] A partir de 1954, rapports calculés sur la base des naissances qui comprennent celles qui sont survenues hors des îles lorsque les parents, ou l'un seulement, sont inscrits sur le registre de population des Antilles néerlandaises.
[26] Aruba, Bonaire et Curaçao seulement.
[27] Ensemble des morts fœtales quelle que soit la durée de gestation, bien que l'enregistrement ne soit obligatoire que pour les morts fœtales survenant après 28 semaines ou plus de gestation.
[28] Non compris les Indiens vivant en tribus (48 654 en 1950) ni la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).
[29] Les rapports correspondants pour les fœtus de 28 semaines ou plus sont 12,9 pour 1950, 13,2 pour 1951 et 16,5 pour 1958.
[30] Non compris l'Alaska et Hawaii.
[31] Pour les années antérieures à 1954, données classées selon l'année de l'enregistrement et non l'année de l'événement.
[32] A partir de 1952, non compris les Amérindiens qui font l'objet d'une rubrique distincte.
[33] A l'exception des données relatives aux Amérindiens, qui sont discutables (incomplètes).
[34] Rapports calculés sur la base du nombre des naissances vivantes, ajusté pour tenir compte des lacunes de l'enregistrement; pour plus de détails, voir le tableau 13.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Live-born infants dying before registration of birth are included among late foetal deaths but are excluded from live births used in the computation of ratios.
[3] Registration believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[6] Not computed by the Statistical Office of the United Nations.
[9] Live-born infants dying within 24 hours of birth are included among late foetal deaths but are excluded from live births used in computation of ratios.
[12] Data are deaths of foetuses of 6 or more months' gestation.
[31] Prior to 1954, data are by year of registration rather than by year of occurrence.
[35] Statistics based on burial permits; ratios computed on number of baptisms recorded in church registers.
[36] Excluding Indian jungle population. Prior to 1955, excluding Galapagos Islands, and prior to 1954, also Provinces of Napo Pastaza, Morona Santiago and Zamora Chinchipe.
[37] Published by the World Health Organization Regional Office for the Americas.
[38] Excluding Indian jungle population, estimated at 350 000 in 1940. Statistics based on burial permits.
[39] Registration, as measured by burial permits, estimated to be 50 per cent complete.
[40] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1950-1951.
[41] For all foetal deaths irrespective of gestational age.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non de l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Il est tenu compte des enfants nés vivants décédés avant l'enregistrement de leur naissance pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert au calcul des rapports.
[3] L'enregistrement n'est probablement complet que pour la population civilisée qui représente une fraction relativement faible de la population totale.
[6] Le calcul n'a pas été fait par le Bureau de statistique de l'ONU.
[9] Il est tenu compte des enfants nés vivants décédés dans les 24 heures pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert aux calculs des rapports.
[12] Morts fœtales survenues après 6 mois de gestation au moins.
[31] Pour les années antérieures à 1954, données classées selon l'année de l'enregistrement et non l'année de l'événement.
[35] Les statistiques sont fondées sur le nombre des permis d'inhumer. Rapports calculés sur la base du nombre des baptêmes inscrits sur les registres des églises.
[36] Non compris les Indiens de la jungle. Pour les années antérieures à 1955, non compris les îles Galapagos et, pour les années antérieures à 1954, non compris les provinces de Napo Pastaza, Morona Santiago et Zamora Chinchipe.
[37] Chiffres publiés par l'Organisation mondiale de la santé (Bureau régional des Amériques).
[38] Non compris les Indiens de la jungle (estimés à 350 000 en 1940). Statistiques fondées sur les permis d'inhumer.
[39] La complétude de l'enregistrement, à en juger d'après le nombre des permis d'inhumer, est estimée à 50 pour 100.
[40] Non compris les Indiens et les noirs vivant en tribus (estimés à 26 000 en 1950-1951).
[41] Ensemble des morts fœtales quelle que soit la durée de gestation.

17. Morts foetales tardives et rapports de mortinalité (suite)

[42] Excluding Indian jungle population, numbering 56 705 in 1950.
[43] Numbering 49, 60, 62, 59, 62, 61, 74, 68, 62 and 50, for 1950-1959, respectively, and having a present population of approximately 2 million.
[44] Data are for selected ("Proclaimed") urban areas in which the registrar is a medical practitioner.
[45] Former British dependency; declared independent 16 August 1960. Beginning 1955, data are official estimates which include an adjustment for incompleteness of reporting.
[46] Data are for a changing group of states and territories which, in 1958, included a population of about 300 million.
[47] Includes data for Netherlands New Guinea.
[48] Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago, and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively.
[49] Data are for a changing registration area which comprises about 92 per cent of total population.
[50] Data are limited in geographic coverage; in 1951, 1952 and 1953, reports were received from only 66 per cent of the local civil registrars; in 1956, 1957 and 1958, from 75, 81 and 84 per cent, respectively.
[51] Beginning 1957, data exclude non-locally domiciled military and civilian services personnel and their dependants.
[52] Beginning March 1957, data are for provincial capitals and district centers.
[53] For March to December only.
[54] Prior to 1957, data are for 22 provinces and the Prefecture of Saigon in South Viet-Nam only, except that in 1956 data for Phuóc-long and Kien-phong Provinces and Phu-quoc delegation are excluded. For 1958, data exclude Kontum and Pleiku Provinces, and for 1959, exclude Phuoc-thành, Bình-dinh, Darlac and Quáng-duc Provinces and city of Huê.
[55] Computed on live births which include data for Phu-quoc delegation.

[42] Non compris les Indiens de la jungle (56 705 en 1950).
[43] 1950 : 49; 1951 : 60; 1952 : 62; 1953 : 59; 1954 : 62; 1955 : 61; 1956 : 74; 1957 : 68; 1958 : 62; 1959 : 50. Population présente : environ 2 millions.
[44] Les données se rapportent à certaines zones urbaines à régime spécial ("Proclaimed") où l'officier d'état civil est un médecin.
[45] Ancienne possession britannique proclamée indépendante le 16 août 1960. A partir de 1955, les données sont des estimations officielles ajustées pour tenir compte de l'incomplétude des déclarations.
[46] Données se rapportant à un groupe variable d'Etats et de territoires qui comptaient quelque 369 millions d'habitants en 1958.
[47] Y compris la Nouvelle-Guinée néerlandaise.
[48] Ne concerne que les nationaux japonais se trouvant au Japon. Avant mai 1952, non compris l'archipel des Tokara et avant 1954, non compris les îles Amami détachés des Ryû-kyû le 5 décembre 1951 et le 25 décembre 1953 respectivement.
[49] Données se rapportant à une zone d'enregistrement variable comprenant environ 92 pour cent de la population totale.
[50] Portée géographique limitée; en 1951, 1952 et 1953, quelque 66 pour cent seulement des officiers d'état civil locaux ont communiqué des renseignements; ce pourcentage a atteint 75 en 1956, 81 en 1957 et 84 en 1958.
[51] A partir de 1957, non compris les militaires et fonctionnaires civils domiciliés en dehors du territoire, ainsi que les personnes à leur charge les accompagnant.
[52] A partir de mars 1957, les données se rapportent aux capitales de provinces et aux chefs-lieux de districts.
[53] Mars à décembre seulement.
[54] Pour les années antérieures à 1957, données se rapportant à 22 provinces et à la préfecture de Saïgon dans le Sud-Viet-Nam seulement; toutefois les données relatives aux provinces de Phuôc-long et Kiên-phong et à la délégation de Phu-quoc sont exclues en 1956. Pour 1958 non compris les provinces de Kontum et Plei-ku, et pour 1959, non compris les provinces de Phuôc-thành, Binh-dinh, Darlac et Quáng-dux et la ville Hué.
[55] Sur la base des naissances vivantes qui comprennent les chiffres de la délégation de Phu-quoc.

17. Late foetal deaths and late foetal death ratios (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[9] Live-born infants dying within 24 hours of birth are included among late foetal deaths but are excluded from live births used in computation of ratios.
[12] Data are deaths of foetuses of 6 or more months' gestation.
[17] Prior to 1956, data are by year of registration rather than by year of occurrence.
[19] For deaths of foetuses of 5 or more months' gestation.
[34] Ratios computed on live births which have been adjusted for underregistration; for details, see Table 13.
[41] All foetal deaths irrespective of gestational age.
[56] For 1957-1959, data for dependencies of Guernsey are excluded.
[57] Excluding Faeroe Islands and Greenland, shown separately.
[58] For Finnish nationals in Finland only.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données classées selon l'année de l'enregistrement et non de l'année de
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[9] Il est tenu compte des enfants nés vivants décédés dans les 24 heures pour établir le nombre des morts fœtales tardives mais non celui des naissances vivantes qui sert aux calculs des rapports.
[12] Morts fœtales survenues après 6 mois de gestation au moins.
[17] Pour les années antérieures à 1956, données classées selon l'année de l'enregistrement et non selon l'année de l'événement.
[19] Morts fœtales survenues après 5 mois de gestation au moins.
[34] Rapports calculés sur la base du nombre des naissances vivantes, ajusté pour tenir compte des lacunes de l'enregistrement; pour plus de détails, voir le tableau 13.
[41] Ensemble des morts fœtales quelle que soit la durée de gestation.
[56] Pour 1957-1959, non compris les dépendances de Guernesey.
[57] Non compris les îles Féroé et le Groënland qui font l'objet de rubriques distinctes.
[58] Ne concerne que les nationaux finlandais se trouvant en Finlande.

17. Morts foetales tardives et rapports de mortinalité (suite)

[Voir note au début du tableau.]

[59] Includes data for East Berlin.
[60] Data include events among residents of the Federal Republic of Germany temporarily in West Berlin and exclude those among alien armed forces and non-resident civilians temporarily in the area.
[61] Data include events among residents of West Berlin temporarily in the Federal Republic of Germany and exclude those among alien armed forces and non-resident civilians temporarily in the area.
[62] Data include events occurring outside country if one or both parents are listed in a Netherlands population register; hence, prior to 1959, they excluded events among Amboynese population living in camps.
[63] Data are for years ended 31 March.
[64] Excluding events among United States military personnel, their dependants and contract employees.
[65] Excludes data for Rota and the outer islands of the Yap district.

[59] Y compris Berlin-Est.
[60] Y compris les morts fœtales tardives survenues parmi les résidants de la République fédérale d'Allemagne se trouvant temporairement à Berlin-Ouest, Mais non compris celles qui sont survenues dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement dans la République fédérale d'Allemagne.
[61] Y compris les morts fœtales tardives survenues parmi les résidants de Berlin-Ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris celles qui se sont produites dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement à Berlin-Ouest.
[62] Y compris les morts fœtales survenues hors du pays si les parents, ou l'un d'eux seulement, sont inscrits sur un registre de population néerlandais; en conséquence, pour les années antérieures à 1959, non compris celles qui se sont produites parmi les amboinais vivant dans des camps.
[63] Années terminées le 31 mars.
[64] Non compris les morts fœtales tardives survenues dans les familles des militaires et agents contractuels américains.
[65] Non compris Rota ni les îles périphériques du district de Yap.

18. Deaths by age and sex : latest available year

[Data exclude foetal deaths. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For evaluation of quality of data, see code on Table 15 and discussion, page 41.]

[9] For 3-6 years.
[10] For 7-14 years.
[11] Data are for a compulsory registration area of 36 towns and townships which comprises about 12 per cent of total population and is not representative of Ghana.
[12] Data are estimates obtained from results of 1954-1955 demographic sample survey of residents.
[13] Summation of frequencies for age groups gives totals of 57 220 for males, and 52 459 for females; reason for discrepancy not ascertained.
[14] Shown previously as Malagasy Republic. At end of 1958 became internally autonomous republic within French Community; declared independent 25 June 1960.
[15] Northern part of former Spanish Protectorate.
[16] The former French Protectorate.

[9] 3-6 ans.
[10] 7-14 ans.
[11] Données se rapportant à une zone où l'enregistrement est obligatoire; cette zone se compose de 36 villes et municipalités comptant 12 pour cent environ de la population totale et n'est pas représentative du Ghana.
[12] Les données proviennent d'estimations obtenues à partir des résultats de l'enquête démographique par sondage des résidents, effectuée en 1954-1955.
[13] La somme des données pour les différents groupes d'âge s'établit à 57 220 pour le sexe masculin et 52 459 pour le sexe féminin; on ne sait pas comment s'expliquent les divergences.
[14] Anciennement République malgache. Ce pays est devenu, à la fin de 1958, une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 25 juin 1960.
[15] Partie nord de l'ancien Protectorat espagnol.
[16] Ancien Protectorat français.

[17] For 5-17 years.
[18] For 18 years and over.
[19] Former British dependency; declared independent 1 October 1960.
[20] Age classification is not in accord with table; categories are as follows: 1-10 years, 11-20; 21-30, 31-40, 41-50, 51-60, 61-70, 71-80, 81 and over.
[21] Formerly known as Spanish Guinea and comprising African provinces of Fernando Poo and Rio Muni.
[22] Excludes deaths of infants dying within 24 hours of birth.

[17] 5-17 ans.
[18] 18 ans et plus.
[19] Ancienne possession britannique; proclamée indépendante le 1er octobre 1960.
[20] Classement par âge ne correspondant pas au tableau; les catégories sont : 1-10 ans, 11-20, 21-30, 31-40, 41-50, 51-60, 61-70, 71-80, 81 et plus.
[21] Anciennement Guinée espagnole; ce territoire comprend les provinces africaines espagnoles de Rio Muni et de Fernando Poo.
[22] Non compris les enfants nés vivants décédés dans les 24 heures qui ont suivi la naissance.

[26] For 31 years and over.
[27] Data exclude deaths among tourists and among United Kingdom and United States armed forces and their dependants stationed in the area.
[28] Reason for discrepancy between sum of frequencies for male and female all ages shown here and deaths of both sexes shown elsewhere, not ascertained.
[29] Data include deaths of Canadian residents temporarily in the United States, but exclude deaths of United States residents temporarily in Canada.

[26] 31 ans et plus.
[27] Non compris les décès survenus parmi les touristes ni parmi les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leur famille les accompagnant.
[28] On ne sait pas comment s'explique la différence entre la somme des données pour l'un et l'autre sexes présentées ici et le total pour les deux sexes indiqué ailleurs.
[29] Y compris les décès de résidants canadiens se trouvant temporairement aux Etats-Unis, mais non compris les décès de résidants des Etats-Unis se trouvant temporairement au Canada.

[30] Data are for Aruba and Curacao only and include deaths among persons outside the islands, if they were listed in the population register of the islands mentioned. For Aruba, data exclude deaths of infants dying before registration of birth.

[31] Excluding data for Canal Zone, shown separately above, and tribal Indian population.

[32] Data are based on a 10 per cent sample of death certificates in area excluding Alaska and Hawaii.

[30] Aruba et Curaçao seulement. Y compris décès survenus en dehors des îles si les défunts étaient inscrits sur le registre de population des îles en question. Pour Aruba, non compris les décès d'enfants survenus avant l'enregistrement de la naissance.

[31] Non compris la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut). Il n'est pas tenu compte non plus des Indiens vivant en tribus.

[32] D'après un échantillon de 10 pour cent des certificats de décès aux Etats-Unis à l'exclusion de l'Alaska et d'Hawaii.

[28] Reason for discrepancy between sum of frequencies for male and female all ages shown here and deaths of both sexes shown elsewhere, not ascertained.

[28] On ne sait pas comment s'explique la différence entre la somme des données pour l'un et l'autre sexes présentées ici et le total pour les deux sexes indiqué ailleurs.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data exclude deaths among armed forces.
[2] Excludes deaths of infants dying before registration of birth.
[43] Estimates for year ended April 1959, based on results of demographic sample survey in 345 villages.
[44] Data exclude deaths among armed forces and foreigners.
[45] Former British dependency, declared independent 16 August 1960; data are official estimates which include an adjustment for incompleteness of reporting.
[46] Data exclude 8 deaths of unknown sex, of which 2 are infants, 2 of age group 1-4, and 4 of unknown age.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
* Provisoire.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] Non compris les décès de militaires.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[43] Estimations pour l'année terminée en avril 1959, d'après les résultats d'une enquête démographique par sondage effectuée dans 345 villages.
[44] Non compris les décès de militaires et d'étrangers.
[45] Ancienne possession britannique, proclamée indépendante le 16 août 1960. Estimations officielles, après ajustement destiné à compenser les lacunes de l'enregistrement.
[46] Non compris 8 décès de sexe inconnu, dont 2 de moins d'un an, 2 du groupe d'âge 1-4 ans et 4 d'âge inconnu.

[47] Data are for 12 States of Andhra Pradesh, Bombay, Madras, Orissa, Punjab, Madhya Pradesh, Mysore, Uttar Pradesh, West Bengal, Kerala, Assam and Bihar and 2 territories of Delhi, and Manipur. Excluding deaths of 41 102 persons of unknown age. Also 9 529 deaths in territory of Himachal Pradesh are excluded.

[48] Data are for Japanese nationals in Japan only and exclude 63 deaths of unknown age and sex.

[49] Excluding deaths among foreigners except those among registered Palestinian refugees (numbering 595 725 on 30 June 1959) which are included.

[50] Includes foetal deaths.

[51] Data exclude deaths among registered Palestinian refugees, numbering 102 625 in June 1956.

[52] Data are for registration area which, in 1951, comprised about 92 per cent of total population. Former States of Khairpur, Baluchistan States Union, Tribal Areas of West Pakistan and Karachi are excluded, except Quetta City, which is included.

[53] Reason for discrepancy between sum of male and female infant deaths shown here, and that shown elsewhere not ascertained.

[47] Les données se rapportent aux 12 Etats suivants : Assam, Andhra Pradesh, Bihar, Bombay, Kerala, Madhya Pradesh, Madras, Mysore, Orissa, Pendjab, Uttar Pradesh et Bengale occidental ainsi qu'aux deux Territoires de Manipur et Delhi. Non compris 41 102 décès d'âge inconnu et 9 529 décès survenus dans le territoire de Himachal Pradesh.

[48] Ne concerne que les nationaux japonais se trouvant au Japon et ne comprend pas 63 décès d'âge et de sexe inconnus.

[49] Non compris les décès d'étrangers sauf ceux de réfugiés palestiniens enregistrés (ces réfugiés étaient au nombre de 595 725 au 30 juin 1959).

[50] Y compris les morts fœtales.

[51] Non compris les décès de réfugiés palestiniens enregistrés (ces réfugiés étaient au nombre de 102 625 en juin 1956).

[52] Données se rapportant à la zone d'enregistrement qui, en 1951, comprenait environ 92 pour cent de la population totale. Non compris les anciens Etats de Khairpur, l'Union des Etats du Baluchistan, les zones tribales du Pakistan occidental et Karachi, mais y compris la ville de Quetta.

[53] On ne sait pas pourquoi la somme des décès d'enfants de moins de 1 an pour les deux sexes d'écarte du chiffre correspondant donné ailleurs.

Italics: Data are unreliable or of unknown completeness.
† Data tabulated by year of registration rather than occurrence.
[2] Excludes deaths of infants dying before registration of birth.
[28] Reason for discrepancy between sum of frequencies for male and female all ages shown here and deaths of both sexes shown elsewhere, not ascertained.
[59] Data exclude infants born alive after less than 28 weeks' gestation, less than 1 000 grammes in weight and 35 centimetres in length, who die within 24 hours of birth.
[60] Excluding Faeroe Islands and Greenland, shown separately.
[61] Data include deaths among armed forces stationed outside country.
[62] Data include deaths of Finnish nationals temporarily outside country.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[2] Non compris les enfants nés vivants décédés avant l'enregistrement de leur naissance.
[28] On ne sait pas comment s'explique la différence entre la somme des données pour l'un et l'autre sexes présentées ici et le total pour les deux sexes indiqué ailleurs.
[59] Il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1 000 grammes, mesurant moins de 35 centimètres et décédés dans les 24 heures qui ont suivi la naissance.
[60] Non compris les îles Féroé et le Groenland, qui font l'objet de rubriques distinctes.
[61] Y compris les décès survenus parmi les militaires hors du pays.
[62] Y compris les décès de nationaux finlandais se trouvant temporairement hors du pays.

[63] Except for under 5 years, age classification based on year of birth rather than on completed years of age.
[64] Including deaths in East Berlin.
[65] Data include deaths among residents of the Federal Republic of Germany temporarily in West Berlin and exclude deaths among alien armed forces and non-resident civilians temporarily in the area.
[66] Data include deaths among residents of West Berlin temporarily in the Federal Republic of Germany, and exclude deaths among alien armed forces and non-resident civilians temporarily in the area.
[67] Data are deaths registered within one year of occurrence.

[63] Sauf pour les moins de 5 ans, le classement par âge est fait d'après l'année de naissance et non d'après l'âge en années révolues.
[64] Y compris Berlin-Est.
[65] Y compris les décès de résidants de la République fédérale d'Allemagne se trouvant temporairement dans Berlin-Ouest mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement sur le territoire.
[66] Y compris les décès de résidants de Berlin-Ouest se trouvant temporairement dans la République fédérale d'Allemagne, mais non compris les décès survenus dans les familles des militaires étrangers et des civils non résidants se trouvant temporairement dans Berlin-Ouest.
[67] Décès enregistrés dans l'année qui suit l'événement.

[69] Data include deaths of Netherlands residents outside country if listed in a Netherlands population register; exclude those among alien armed forces stationed in the area.

[70] Data include deaths of Norwegian residents temporarily outside country.

[69] Y compris les décès de résidants néerlandais survenus hors du pays, à condition qu'ils aient été inscrits sur un registre de population néerlandais; non compris les décès de militaires étrangers en garnison sur le territoire.

[70] Y compris les décès de résidants norvégiens se trouvant temporairement hors du pays.

[72] Excluding alien armed forces stationed in the area.
[73] Data exclude deaths among United States military personnel, their dependants and contract employees.

[72] Non compris les militaires en garnison sur le territoire.
[73] Non compris les militaires des Etats-Unis et les membres de leur famille les accompagnant, ni les agents contractuels des Etats-Unis.

19. Deaths and death rates by cause : latest available year

[Data exclude foetal deaths. Cause of death is classified according to List B, the abbreviated List of 50 Causes for Tabulation of Mortality of the International Statistical Classification of Diseases, Injuries, and Causes of Death. Rates are the number of deaths from each cause per 100 000 population. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For discussion, see page 42.]

19. Décès selon la cause, nombres et taux : dernière année disponible

[Il n'est pas tenu compte des morts foetales. Les causes de décès sont classées conformément à la liste B—Liste abrégée de 50 rubriques pour la mise en tableaux des causes de mortalité—du Classement statistique international des maladies, traumatismes et causes de décès. Les taux représentent le nombre des décès attribuables à chaque cause pour 100 000 personnes dans la population totale. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Voir explications à la page 93.]

[7] Excluding data for Alaska and Hawaii.
[8] Includes 4 deaths not medically certified and therefore not tabulated by cause.
[9] Of which 2 in BE 48, 1 in BE 49 and 18 classi'ed only according to the BN categories of the "Nature of Injury" classification (5 in BN 47, 2 in BN 48, 1 in BN 49 and 10 in BN 50).

[7] Non compris l'Alaska et Hawaii.
[8] Y compris 4 décès n'ayant pas fait l'objet d'un certificat médical et, en conséquence, non classés selon la cause.
[9] Dont 2 décès classés sous BE 48, 1 sous BE 49 et 18 classés seulement par catégorie à indicatif BN du classement, selon la "nature du traumatisme" (5 sous BN 47, 2 sous BN 48, 1 sous BN 49 et 10 sous BN 50).

19. Deaths and death rates by cause (continued)

[12] Data exclude deaths among armed forces and in port, but rates computed on population including them.
[13] Data are for 50 towns having a population of about 2 million.
[14] Excluding data for armed forces and foreigners, and deaths of infants dying before registration of birth.

[12] Non compris les militaires et compte non tenu du port; toutefois les taux sont calculés sur la base d'un chiffre de population les comprenant.
[13] 50 villes, ayant à la date indiquée une population d'environ 2 millions.
[14] Non compris les militaires et les étrangers, ni les enfants nés vivants décédés avant l'enregistrement de leur naissance.

19. Deaths and death rates by cause (continued)

[See note at head of table.]

[17] Data are incomplete reports from only 81 per cent of the local civil registrars, but rates are computed on total population.

[18] Data exclude deaths among Allied military and civilian personnel and their dependants stationed in the area and deaths of infants dying before registration of birth.

[19] Includes 86 with "Fever" and 219 with "Convulsions".

[20] Of which 289 in BE 47, 2 767 in BE 48, 198 in BE 49, 729 in BE 50 and 1 873 classified only according to BN categories of "Nature of Injury" classification.

[17] Données incomplètes; seulement 81 pour cent des officiers d'état civil ont communiqué des renseignements; toutefois, les taux sont calculés sur la base de la population totale.

[18] Non compris les décès survenus parmi les militaires et civils alliés sur le territoire et les membres de leur famille les accompagnant, ni les enfants nés vivants décédés avant l'enregistrement de leur naissance.

[19] Y compris 86 avec "fièvre" et 219 avec "convulsions".

[20] Dont 289 décès classés sous BE 47, 2 767 sous BE 48, 198 sous BE 49, 729 sous BE 50 et 1 873 classés seulement par catégorie à indicatif BN du classement, selon la "nature du traumatisme".

19. Deaths and death rates by cause (continued)

Italics: Data are unreliable or of unknown completeness.

† Data tabulated by year of registration rather than occurrence.

[3] Deaths coded according to the categories of the Seventh (1955) Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death.

[21] Rates computed on population excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[3] Décès classés suivant les catégories de la Septième Révision, 1955, des Nomenclatures internationales des maladies et causes de décès.

[21] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les personnes de passage à bord de navires, ni les militaires et les fonctionnaires civils domiciliés en dehors du territoire et les membres de leur famille les accompagnant.

[22] Including data for armed forces stationed outside country, excluding alien armed forces stationed in the area.
[23] Excluding data for dependencies of Guernsey.
[24] Data exclude deaths of infants born alive after less than 28 weeks gestation, less than 1 000 grammes in weight and 35 centimeters in length, who die within 24 hours of birth.
[25] Excluding data for Greenland and Faeroe Islands.
[26] Including data for armed forces stationed outside country.
[27] Other diseases of heart (430-434) included in B 25 rather than in B 27.

[22] Y compris les militaires nationaux hors du pays, mais non compris les militaires étrangers en garnison sur le territoire.
[23] Non compris les dépendances de Guernesey.
[24] Il n'est pas tenu compte des enfants nés vivants après moins de 28 semaines de gestation, pesant moins de 1 000 grammes, mesurant moins de 35 centimètres et décédés dans les 24 heures qui ont suivi leur naissance.
[25] Non compris les îles Féroé ni le Groenland.
[26] Y compris les décès survenus parmi les militaires hors du pays.
[27] "Autres maladies du coeur" (430-434) comprises dans B 25 et non dans B 27.

19. Deaths and death rates by cause (continued)

[See note at head of table.]

Italics: Data are unreliable or of unknown completeness.

[3] Deaths coded according to the categories of the Seventh (1955) Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death.

[28] Including data for Finnish nationals temporarily outside country.

[29] Data include deaths among armed forces outside country, but rates are computed on population excluding alien armed forces and members of career military service outside country, unless on duty in Germany and Austria. Data exclude 3 626 deaths of infants dying before registration of birth.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.

[3] Décès classés suivant les catégories de la Septième Révision, 1955, des Nomenclatures internationales des maladies et causes de décès.

[28] Y compris les décès de ressortissants finlandais se trouvant temporairement hors de Finlande.

[29] Y compris les décès de militaires nationaux hors du pays; cependant, les militaires étrangers dans le pays et les militaires français de carrière stationnés hors du pays, à l'exception de ceux qui étaient en service en Allemagne et en Autriche, ne sont pas compris, pour le calcul des taux, dans le chiffre de population auquel est rapporté le nombre des décès. Non compris 3 626 enfants nés vivants décédés avant l'enregistrement de leur naissance.

19. Décès selon la cause, nombres et taux (suite)

[Voir note au début du tableau.]

[30] Data include deaths among residents of the Federal Republic of Germany temporarily in West Berlin, exclude deaths among alien armed forces and non-resident civilians temporarily in the area.

[31] Data include deaths among residents of West Berlin temporarily in the Federal Republic of Germany, exclude deaths among alien armed forces and non-resident civilians temporarily in the area.

[32] Rates computed on population including armed forces stationed outside country and excluding alien armed forces stationed in the area.

[33] Data are deaths registered within one year of occurrence.

[30] Y compris les décès de résidants de la République fédérale d'Allemagne se trouvant temporairement dans Berlin-Ouest, mais non compris les décès survenus parmi les militaires étrangers et les civils non résidants se trouvant temporairement sur le territoire.

[31] Y compris les décès de résidants de Berlin-Ouest se trouvant temporairement en Allemagne occidentale, mais non compris les décès survenus parmi les militaires étrangers et les civils non résidants se trouvant temporairement dans Berlin-Ouest.

[32] Taux calculés sur la base d'un chiffre de population qui comprend les militaires du pays en garnison à l'étranger, mais non les militaires étrangers en garnison sur le territoire.

[33] Décès enregistrés dans l'année qui suit l'événement.

* Provisional.

[34] Data include deaths among armed forces outside country and exclude those among non-Maltese armed forces in the area; rates are computed on population excluding non-Maltese armed forces stationed in the area, but including civilian nationals temporarily outside the country.

* Provisoire.

[34] Y compris les décès de militaires nationaux hors du pays, mais non compris les décès de militaires non maltais en garnison sur le territoire. Les taux sont calculés sur la base d'un chiffre de population qui ne comprend pas les militaires non maltais en garnison sur le territoire, mais qui comprend les ressortissants civils temporairement hors du pays.

[38] Data are for tabulation area only, comprising 30 per cent of total population and 31.1 per cent of total deaths.
[39] Excluding data for full-blooded aborigines, estimated at 39 319 in June 1954.
[40] Excluding data for alien armed forces stationed in the area.

[38] Données se rapportant à la zone d'exploitation statistique, qui comprend 30 pour cent de la population totale et 31,1 pour cent du totale des décès.
[39] Non compris les aborigènes purs, au nombre de 39 319 en juin 1954 (estimation).
[40] Non compris les décès de militaires étrangers en garnison sur le territoire.

20. Marriages and crude marriage rates : 1950–1959

[Rates are number of legal (recognized) marriages performed and registered, i.e., excluding unions established by mutual consent or by tribal or native custom, per 1 000 population. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For discussion, see page 42.]

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Rates computed on population excluding personnel in military establishments.
[3] Includes large number of consensual unions formalized in response to social security legislation which requires proof of civil registration of marriages.
[4] Data are marriages recorded in Catholic church registers only.
[5] European, Indian and Coloured (mixed) population, together comprising about one per cent of the total.
[6] Formerly Cameroons, a United Nations Trust Territory under French administration; declared independent 1 January 1960.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[2] Taux calculés sur la base de la population totale non compris les personnes employées dans les établissements militaires.
[3] Y compris un grand nombre d'unions consensuelles regularisées par suite de la législation sur la sécurité sociale qui exige la preuve de l'enregistrement du mariage à l'état civil.
[4] Statistiques établies d'après le nombre des mariages inscrits sur les registres des églises catholiques seulement.
[5] Européens, personnes d'origine indienne et personnes de couleur (métis), représentant ensemble 1 pour cent environ de la population totale.
[6] Anciennement Territoire sous tutelle du Cameroun sous administration française; proclamé indépendant le 1er janvier 1960.

20. Mariages et taux bruts de nuptialité : 1950–1959

[Les taux représentent le nombre de mariages reconnus par la loi—non compris les unions formées par consentement mutuel ou selon la coutume tribale ou indigène—qui ont été célébrés et enregistrés pour 1 000 habitants. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Voir explications à la page 93.]

[7] Formerly Belgian Congo; declared independent 30 June 1960.
[8] Northern part of former Spanish Protectorate.
[9] Former French Protectorate.
[10] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development, as measured by educational level, language and mode of living.
[10a] Registration not compulsory; believed to be complete for civilized population only, which represents a relatively small proportion of the total.
[11] Formerly known as Spanish Guinea and comprising African Provinces of Fernando Poo and Rio Muni.
[12] Data exclude marriages between Moroccans, but rates are computed on population including them.
[13] Formerly Togoland, a United Nations Trust Territory under French administration; declared independent 27 April 1960.
[14] Marked increases beginning 1953 due to extension of civil-registration

[7] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[8] Partie nord de l'ancien Protectorat espagnol.
[9] Ancien Protectorat français.
[10] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[10a] L'enregistrement des mariages n'est pas obligatoire; il n'est vraisemblablement complet que pour la population "civilisée" qui représente une fraction relativement faible de la population totale.
[11] Anciennement Guinée espagnole. Comprend les provinces africaines de Fernando Poo et Rio Muni.
[12] Non compris les mariages entre Marocains. Toutefois, les taux sont calculés sur la base d'un chiffre de population qui comprend les Marocains.
[13] Anciennement Territoire sous tutelle du Togo sous administration française; déclaré indépendant le 27 avril 1960.
[14] Les augmentations sensibles observées depuis 1953 s'expliquent par l'extension des services d'état civil.

20. Marriages and crude marriage rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[15] Mixed marriages (primarily between Coloured and Bantu) are included with "Coloured"; these, in 1950-1956, numbered 911, 972, 1 035, 1 006, 1 142, 1 640 and 996, respectively.

[15a] Data are civil and religious marriages only; they thus exclude Bantu customary marriages (*lobola*) which are accepted as legal but for which no provision for the civil registration is made.

[16] Includes marriages resumed after revocable divorce which approximates legal separation; in 1951, these "re-marriages" numbered 1 611.

[17] Excluding nomad population estimated at 179 722 at the end of 1956 and Palestinian refugees numbering 119 648 on 1 July 1959; for refugees excluded each year 1950-1957, see Table 4.

[18] Data for some years probably include also marriages resumed after revocable divorce, which are equivalent to legal separations.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[15] Les mariages mixtes (principalement entre personnes de couleur et Bantous) sont classés comme mariages de personnes de couleur; pour les années 1950-1956, leur nombre s'établit comme suit: 911; 972; 1 035; 1 006; 1 142; 1 640 et 996 respectivement.

[15a] Statistiques établies uniquement d'après le nombre des mariages civils et religieux enregistrés; il n'est donc pas tenu compte des mariages contractés selon la coutume bantoue (*lobola*), qui sont juridiquement valables, mais dont l'inscription ou registre de l'état civil n'est pas prévue.

[16] Y compris les unions reconstituées après un divorce révocable, c'est-à-dire après ce qui est à peu près l'équivalent d'une séparation légale; en 1951, le nombre de ces "remariages" a été de 1 611.

[17] Non compris la population nomade, estimée à 179 722 personnes à la fin de l'année 1956, ni les réfugiés de Palestine, au nombre de 119 648 au 1er juillet 1959. Pour le nombre de réfugiés omis en 1950-1957, voir le tableau 4.

[18] Y compris, vraisemblablement, pour certaines années les unions reconstituées après un divorce révocable, c'est-à-dire après ce qui est l'équivalent d'une séparation légale.

20. Mariages et taux bruts de nuptialité (suite)

[19] Rates computed on population excluding tourists and United Kingdom and United States armed forces and their dependants stationed in the area.
[20] Data are marriage licenses issued.
[21] Includes large number of consensual unions formalized in response to special permissive legislation.
[22] Includes large number of consensual unions formalized in response to campaign of Catholic missionaries.
[23] For indigenous population, which constitutes approximately 98 per cent of total.
[24] For Aruba, Bonaire and Curaçao only.
[25] Excluding tribal Indian population, numbering 68 654 in 1950 and also data for Canal Zone shown separately above.
[26] Data are estimates based on marriages performed for some areas, and on licenses issued or similar information for other areas.

[19] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les touristes ni les militaires du Royaume-Uni et des Etats-Unis et les membres de leur famille les accompagnant.
[20] Statistiques établies d'après le nombre de licences de mariage délivrées.
[21] Compte tenu d'un grand nombre d'unions consensuelles régularisées par suite de la promulgation d'une législation spéciale.
[22] Y compris un grand nombre d'unions consensuelles régularisées à la suite d'une campagne des missionnaires catholiques.
[23] Les données ne concernent que la population indigène qui représente 98 pour cent environ de la population totale.
[24] Les données ne concernent qu'Aruba, Bonaire et Curaçao.
[25] Non compris les Indiens vivant en tribus, au nombre de 48 654 en 1950; à l'exclusion aussi de la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).
[26] Données résultant d'estimations établies sur la base du nombre des mariages célébrés dans certaines régions et du nombre des licences délivrées ou des inscriptions du même ordre dans d'autres régions.

20. Marriages and crude marriage rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[4] Data are marriages recorded in Catholic church registers only.

[10] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development, as measured by educational level, language and mode of living.

[10a] Registration not compulsory; believed to be complete for civilized population only, which represents a relatively small proportion of the total.

[18] Data for some years probably include also marriages resumed after revocable divorce, which are equivalent to legal separations.

[27] Marked increases beginning 1953 reflect effect of extension of family allowance act on 31 July 1953, which required proof of civil registration of marriage.

[28] Excluding Indian jungle population. Prior to 1955, data exclude marriages in Galápagos Islands and, prior to 1954, also those in Provinces of Napo Pastaza, Morona Santiago and Zamora Chinchipe, but rates are computed on total population.

[29] Prior to 1954, data are by year of registration rather than by year of occurrence.

[30] Excluding Indian jungle population, estimated at 350 000 in 1940.

[31] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1950-1956 and 38 000 in 1959.

[32] Civil marriages only, i.e., excluding Hindu and Moslem ritual marriages, recognized by law in 1940.

[33] Excluding Indian jungle population, numbering 56 705 in 1950.

[34] Kandyan marriages are completely registered; registration of Moslem and general marriages is fairly complete.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[4] Statistiques établies d'après le nombre des mariages inscrits sur les registres des églises catholiques seulement.

[10] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré du développement matériel et social determiné du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.

[10a] L'enregistrement des mariages n'est pas obligatoire; il n'est vraisemblablement complet que pour la population "civilisée" qui représente une fraction relativement faible de la population totale.

[18] Y compris, vraisemblablement, pour certaines années les unions reconstituées après un divorce révocable, c'est-à-dire après ce qui est l'équivalent d'une séparation légale.

[27] Les augmentations sensibles observées depuis 1953 s'expliquent par l'entrée en vigueur, le 31 juillet 1953, de dispositions nouvelles exigeant que les bénéficiaires des allocations familiales aient fait enregistrer leur mariage à l'état civil.

[28] Il n'est pas tenu compte des Indiens de la jungle. Non compris les mariages célébrés dans les îles Galapagos, pour les années antérieures à 1955, ni dans les provinces de Napo Pastaza, Morona Santiago et Zamora Chinchipe, pour les années antérieures à 1954; toutefois, les taux ont été calculés sur la base de la population totale.

[29] Pour les années antérieures à 1954, les statistiques sont établies selon l'année de l'enregistrement et non l'année de l'événement.

[30] Non compris les Indiens de la jungle, au nombre de 350 000 en 1940 (estimation).

[31] Non compris les Indiens et les noirs vivant en tribus: 26 000 en 1950-1956 et 38 000 en 1959 (estimations).

[32] Mariages civils seulement, c'est à dire non compris les mariages hindous et musulmans reconnus par la loi en 1940.

[33] Non compris les Indiens de la jungle, au nombre de 56 705 en 1950.

[34] Tous les mariages de Kandyens sont enregistrés; l'enregistrement des mariages musulmans et des autres mariages est relativement complet.

20. Mariages et taux bruts de nuptialité (suite)

[Voir note au début du tableau.]

[35] Excluding data for armed forces and foreigners.
[36] Former British dependency; declared independent 16 August 1960.
[37] Prior to 1958, data are non-Moslem civil marriages; beginning 1958, data include also marriages under Christian Marriage Ordinance which came into effect 1 August 1957.
[38] Data include marriages in Netherlands New Guinea.
[39] Prior to 1952, data are for years ended 20 March. Beginning 1952, data are for years ended 21 December.
[40] Prior to 1958, excluding Bedouin population in the Negev estimated at 14 500 in 1959.
[41] For Jewish population only.
[42] Data are for Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively.
[43] Excluding data for foreigners, except registered Palestinian refugees who are included. For number of refugees, see Table 4.
[44] Registration estimated to be about 85 per cent complete.
[45] For East Jordan only.
[46] Data are for Korean nationals only.
[47] Data are for Lebanese nationals only, i.e., excluding registered Palestinian refugees; for refugees excluded each year 1950-1959, see Table 4.
[48] Data are incomplete returns; in 1951, 1952 and 1953, reports were received from only 65.6 per cent of possible reporting units; in 1956, 1957 and 1958 from 77.8, 80.5 and 83.9 per cent, respectively. Rates are computed on total population.
[49] Note suppressed.
[50] Excluding Allied military and civilian personnel and their dependants stationed in the area.
[51] Prior to 1955, data are by year of registration rather than by year of occurrence.

[35] Non compris les militaires ni les étrangers.
[36] Ancienne possession britannique; proclamée indépendante le 16 août 1960.
[37] Pour les années antérieures à 1958, statistiques établies d'après le nombre des mariages civils non musulmans à partir de 1958, il est tenu compte aussi des mariages célébrés conformément à la *Christian Marriage Ordinance*, entrée en vigueur le 1er août.
[38] Y compris les mariages célébrés en Nouvelle-Guinée néerlandaise.
[39] Pour les années antérieures à 1952, les données se rapportent à des périodes annuelles se terminant le 20 mars. A partir de 1952, les données se rapportent à des périodes annuelles se terminant le 21 décembre.
[40] Pour les années antérieures à 1958, non compris les Bédouins du Négeb : 14 500 en 1959 (estimation).
[41] Ne concerne que la population juive.
[42] Ne concerne que les nationaux japonais se trouvant au Japon. Pour la période antérieure à mai 1952, non compris l'archipel des Togara et, pour les années antérieures à 1954, les îles Amami, détachées des îles Ryû-Kyû et rattachées au Japon le 5 décembre 1951 et le 25 décembre 1953 respectivement.
[43] Non compris les étrangers, mais y compris les réfugiés palestiniens immatriculés. Pour le nombre de réfugiés, voir Tableau 4.
[44] L'enregistrement saisirait 85 pour cent environ des mariages.
[45] Ne concerne que la partie orientale de la Jordanie.
[46] Ne concerne que les nationaux coréens.
[47] Ne concerne que les nationaux libanais; il n'est pas tenu compte des réfugiés de Palestine immatriculés; pour le nombre de réfugiés omis en 1950-1959, voir le tableau 4.
[48] Données incomplètes; en 1951, 1952 et 1953, des bulletins n'ont été reçus que de 65,6 pour cent des bureaux d'état civil et en 1956, 1957 et 1958 que de 77,8, de 80,5 et de 83,9 pour cent de ces bureaux respectivement. Taux calculés sur la base de la population totale.
[49] Note supprimée.
[50] Non compris les militaires et agents civils alliés en poste sur le territoire, ni les membres de leur famille les accompagnant.
[51] Pour les années antérieures à 1955, les statistiques sont établies selon l'année de l'enregistrement et non l'année de l'événement.

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[52] Prior to 1955, data are civil marriages only, i.e., excluding religious ritual marriages; for 1955 and 1958, data are civil and Christian ritual marriages; for 1956, 1957 and 1959, data are civil, Christian and Moslem ritual marriages. Rates are computed on population excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants.

[53] For 1954-1956, excluding data for 7, 2 and 4 provinces, respectively; for 1957, excluding Ba-xuyên, Darlac and Pleiku provinces, for 1958 excluding Kontum and Pleiku provinces, and for 1959 excluding Phuóc-thanh, Binh-dinh, Darlac and Quang-duc provinces and the city of Huê. Rate for 1959 computed on population including Huê.

[54] Data exclude marriages of aliens temporarily in the area.

[55] Data include marriages among armed forces stationed outside country and among alien armed forces in area unless performed by local foreign authority.

[56] Data include marriages of Bulgarian nationals outside the country, but exclude those of aliens in the area.

[57] Excludes data for dependencies of Guernsey.

[58] Excluding Faeroe Islands and Greenland, shown separately.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.

[52] Pour les années antérieures à 1955, mariages civils seulement, c.à.d. non compris les mariages religieux; pour 1955 et 1958, mariages civils et chrétiens; pour 1956, 1957 et 1959, mariages civils, chrétiens et musulmans. Taux calculés sur la base d'un chiffre de population qui ne comprend pas les personnes de passage à bord de bateaux, ni les militaires et les fonctionnaires civils non domiciliés sur le territoire, ainsi que les personnes à leur charge les accompagnant.

[53] De 1954 à 1956, non compris 7, 2 et 4 provinces respectivement; non compris, pour 1957, les provinces de Ba-xuyên, Darlac et Pleiku; pour 1958, les provinces de Kontum et Pleiku et, pour 1959, les provinces de Phuóc-thanh, Binh-dinh, Darlac et Quang-duc et la ville de Huê. Taux pour 1959 calculé sur la base de la population totale y compris Huê.

[54] Non compris les mariages d'étrangers se trouvant temporairement sur le territoire.

[55] Y compris les mariages de militaires nationaux hors du pays et les mariages de militaires étrangers en garnison sur le territoire, sauf s'ils ont été célébrés par l'autorité étrangère.

[56] Y compris les mariages de Bulgares célébrés à l'étranger mais non compris les mariages d'étrangers célébrés sur le territoire.

[57] Non compris les dépendances de Guernesey.

[58] Non compris les îles Féroé et le Groenland qui font l'objet de rubriques distinctes.

[59] Data are marriages in which the bride was domiciled in Finland. 1950: rate computed on Finnish nationals in Finland plus resident aliens; beginning 1951, rates computed on Finnish nationals in Finland plus those temporarily outside.

[60] Data include marriages among armed forces stationed outside country; rates are computed on population excluding alien armed forces stationed in the area and members of career military service outside country, unless on duty in Germany or Austria.

[61] Rates computed on population excluding armed forces.

[62] Rates computed on population including armed forces outside country and excluding alien armed forces stationed in the area.

[63] Prior to 1956, data are by year of registration rather than by year of occurrence.

[64] Rate computed on population including armed forces and civilians stationed outside country.

[65] Data include marriages among armed forces stationed outside country, but rates are computed on population excluding non-Maltese armed forces stationed in the area and including civilian nationals temporarily outside country.

[66] Prior to 1952, data are by year of registration rather than by year of occurrence.

[67] Prior to 1953, data include marriages occurring outside country if registered in a Netherlands population register within one year.

[68] Data are marriages in which the groom was domiciled in Norway.

[59] Les données ne comprennent que les mariages où la femme était domiciliée en Finlande. 1950: taux calculé sur la base d'un chiffre de population comprenant les nationaux finlandais qui se trouvaient en Finlande et les résidants étrangers; à partir de 1951, le chiffre de population comprend les nationaux dans le pays ainsi que ceux qui étaient temporairement absents.

[60] Y compris les mariages de militaires nationaux hors du pays; taux calculés sur la base d'un chiffre de population qui ne comprend ni les militaires étrangers en garnison sur le territoire, ni les militaires nationaux de carrière hors du pays, sauf ceux qui étaient en poste en Allemagne ou en Autriche.

[61] Taux calculés sur la base de la population, non compris les militaires.

[62] Taux calculés sur la base d'un chiffre de population qui comprend les militaires nationaux hors du pays mais non les militaires étrangers en garnison sur le territoire.

[63] Pour les années antérieures à 1956, les statistiques sont établies selon l'année de l'enregistrement et non l'année de l'événement.

[64] Le taux est calculé sur la base d'un chiffre de population qui comprend les militaires et les civils en poste hors du pays.

[65] Y compris les mariages de militaires nationaux hors du pays; taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires non maltais en garnison sur le territoire mais qui comprend les civils nationaux temporairement hors du pays.

[66] Pour les années antérieures à 1952, les statistiques sont établies selon l'année de l'enregistrement et non l'année de l'événement.

[67] Pour les années antérieures à 1953, y compris les mariages célébrés à l'étranger, à condition qu'ils aient été inscrits sur un registre de population néerlandais au cours de l'année qui a suivi la célébration.

[68] Les données ne comprennent que les mariages où l'époux était domicilié en Norvège.

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[69] Computed on population including merchant seamen at sea.
[70] Excluding full-blooded aborigines, estimated at 39 319 in June 1954.
[71] Beginning 1950, data are for years ended 31 March and rates computed on population as of 30 September.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le chapitre II.
[69] Taux calculé sur la base d'un chiffre de population qui comprend les équipages de la marine marchande en mer.
[70] Non compris les aborigènes purs, au nombre de 39 319 et juin 1954 (estimation).
[71] A partir de 1950, les données se rapportent à des périodes annuelles se terminant le 31 mars, mais les taux sont calculés sur la base de la population au 30 septembre.

20. Mariages et taux bruts de nuptialité (suite)

[Voir note au début du tableau.]

[72] Including data for the Condominium of Canton and Enderbury Islands.
[73] Rates computed on population excluding United States military, their dependants and contract employees.
[74] 1950: data are for indigenous population only and for year ended 30 June. 1951-1953, excluding marriages in Rota.
[75] Includes marriages in Rota.
[76] Beginning 1953, data are for Tongan population only.
[77] Data are for years ended 31 March.
[78] Data are for Samoan population only.
[79] Not computed by the Statistical Office of the United Nations.

[72] Y compris les mariages dans la population du Condominium des îles Canton et Enderbury.
[73] Taux calculés sur la base d'un chiffre de population que ne comprend pas les militaires des Etats-Unis et les membres de leur famille ni les agents contractuels des Etats-Unis.
[74] 1950: chiffre se rapportant à la population indigène seulement et à la période annuelle terminée le 30 juin. Pour 1951-1953, non compris les mariages célébrés dans Rota.
[75] Y compris les mariages célébrés dans Rota.
[76] A partir de 1953, les données ne concernent que les Tongans.
[77] Les données se rapportent à des périodes annuelles se terminant le 31 mars.
[78] Les données ne concernent que les Samoans.
[79] Ce taux n'a pas été calculé par le Bureau de statistique des Nations Unies.

21. Marriages by age of bride and by age of groom : latest available year

[Data are legal (recognized) marriages performed and registered, i.e. excluding unions established by mutual consent or by tribal or native custom. Italics indicate that data are unreliable (incomplete) or of unknown completeness. For evaluation of quality of data, see Table 20, and for discussion, see page 43.]

Continent, country and year	BRIDE (age, in years) — EPOUSE (âge, en années)

[5] Formerly known as Spanish Guinea, and comprising African provinces of Fernando Poo and Rio Muni.
[6] Data exclude marriages between Moroccans.
[7] Mixed marriages (primarily between Coloured and Bantu) are included with "Coloured"; for number, both sexes, see Table 20.
[8] For under 16 years.
[9] For 16-20 years.
[10] For 21-24 years.

[5] Anciennement Guinée espagnole; comprend les provinces africaines de Fernando Poo et Rio Muni.
[6] Non compris les mariages entre Marocains.
[7] Les mariages mixtes (principalement entre personnes de couleur et Bantous) sont classés comme mariages de personnes de couleur; pour leur nombre, sans répartition selon le sexe, voir le tableau 29.
[8] Moins de 16 ans.
[9] 16-20 ans.
[10] 21-24 ans.

[11] Data are civil and religious marriages only; they thus exclude Bantu customary marriages *(lobola)* which are accepted as legal but for which no provision for the civil registration is made.
[12] For 16-19 years.
[13] Data include marriages resumed after "revocable divorce", which is roughly equivalent to "legal separation".
[14] Data are marriage licenses issued.
[15] Includes large number of consensual unions formalized in response to campaign of Catholic missionaries.
[16] Data are for Aruba and Curaçao only.

[11] Statistiques établies uniquement d'après le nombre des mariages civils et religieux enregistrés; il n'est donc pas tenu compte des mariages contractés selon la coutume bantoue *(lobola)*, qui sont juridiquement valables, mais dont l'inscription au registre de l'état civil n'est pas prévue.
[12] 16-19 ans.
[13] Y compris les unions reconstituées après un divorce révocable, c'est-à-dire après ce qui est à peu près l'équivalent d'une séparation légale.
[14] Statistiques établies d'après le nombre des licences de mariage délivrées.
[15] Y compris un grand nombre d'unions consensuelles régularisées à la suite d'une campagne menée par les missionnaires catholiques.
[16] Les données ne concernent qu'Aruba et Curaçao.

Italics: Data are unreliable or of unknown completeness.
† Data tabulated by year of registration rather than occurrence.
[14] Data are marriage licenses issued.
[15] Includes large number of consensual unions formalized in response to campaign of Catholic missionaries.
[17] Excluding tribal Indian population, numbering 48 654 in 1950, and also data for Canal Zone shown separately above.

Italique : Données discutables ou dont le degré de complétude n'est pas connu.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[14] Statistiques établies d'apres le nombre des licences de mariage délivrées.
[15] Y compris un grand nombre d'unions consensuelles régularisées à la suite d'une campagne menée par les missionaires catholiques.
[17] Non compris les Indiens vivant en tribus, au nombre de 48 654 en 1950; à l'exclusion aussi de la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).

21. Mariages selon l'âge de l'épouse et selon l'âge de l'époux (suite)

[18] Data are marriages performed in 29 states only. They are not to be considered as necessarily representative of the United States; among the most populous areas excluded are Illinois, Texas and New York City.
[19] Data are marriages recorded in church registers.
[20] Excluding Indian jungle population.

[18] Mariages célébrés dans 29 Etats seulement. Ces données ne sont donc pas nécessairement représentatives pour l'ensemble des Etats-Unis; parmi les régions les plus peuplées dont il n'est pas tenu compte, figurent l'Illinois, le Texas et la ville de New-York.
[19] Statistiques établies d'après le nombre des mariages inscrits sur les registres des églises.
[20] Non compris les Indiens de la jungle.

21. Marriages by age of bride and by age of groom (continued)

Italics: Data are unreliable or of unknown completeness.
* Provisional.
† Data tabulated by year of registration rather than occurrence.
[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.
[2] Beginning 1957, rates computed on population excluding personnel in military establishments.
[3] Population which has fulfilled certain conditions established by law, i.e., achieved a prescribed degree of material and social development, as measured by educational level, language and mode of living.
[4] Data include annulments.
[5] Northern part of former Spanish Protectorate. Data are Moslem divorces, including "revocable divorces" which approximate legal separations but rates are computed on total population of the Zone.
[6] Former French Protectorate. Rates computed on population excluding personnel in military establishments.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.
* Données provisoires.
† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.
[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le Chapitre II.
[2] A partir de 1957, taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires encasernés.
[3] Population remplissant certaines conditions fixées par la loi, c'est-à-dire ayant atteint un degré de développement matériel et social déterminé du point de vue du niveau d'instruction, de la langue parlée et du mode de vie.
[4] Y compris les annulations.
[5] Zone du Nord de l'ancien Protectorat espagnol. Les données représentent les divorces de musulmans, y compris les "divorces révocables" qui sont à peu près l'équivalent de "séparations légales", mais les taux sont calculés sur la base de la population totale.
[6] Ancien Protectorat français. Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires encasernés.

22. Divorces, nombre et taux bruts : 1950-1959

[Les taux représentent le nombre de jugements de divorce définitifs prononcés par les tribunaux pour 1 000 habitants. Sauf indication contraire, il n'est pas tenu compte des annulations ni des séparations légales. Les données discutables (incomplètes) ou dont le degré de complétude n'est pas connu sont reproduites en italique. Voir explications à la page 95]

[7] Data include annulments and legal separations.
[8] Divorces of mixed unions are included with "Coloured".
[9] Includes revocable divorces (among Moslem population) which approximate legal separations.
[10] Excluding nomad population, estimated at 179 722 at the end of 1956, and Palestinian refugees, numbering 119 648 on 1 July 1959. For refugees excluded each year 1950-1957, see Table 4.
[11] Data are divorces among Christian and Moslem population only, and for the latter, include "revocable divorces" which approximate "legal separations".
[12] Data are petitions for divorce entered in courts.
[13] Rates computed on population excluding tourists and United Kingdom and United States armed forces and their dependants stationed in the area.
[14] Prior to 1958, excluding divorces in Yukon and Northwest Territories.

[7] Y compris les séparations légales et annulations.
[8] Les ruptures légales d'unions "mixtes" sont classées comme divorces de "personnes de couleur".
[9] Les données comprennent les "divorces révocables" (de musulmans) qui sont à peu près l'équivalent de "séparations légales".
[10] Non compris la population nomade, estimée à 179 722 personnes à la fin de l'année 1956, ni les réfugiés de Palestine, au nombre de 119 648 au 1er juillet 1959. Pour le nombre de réfugiés omis chaque année de 1950 à 1957; voir le Tableau 4.
[11] Les données représentent uniquement les divorces de chrétiens et de musulmans, y compris pour ces derniers, les "divorces révocables" qui sont à peu près l'équivalent de "séparations légales."
[12] D'après les instances en divorce devant les tribunaux.
[13] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les touristes ni les militaires du Royaume-Uni et des Etats-Unis en garnison sur le territoire et les membres de leur famille les accompagnant.
[14] Pour les années antérieures à 1958, non compris les divorces prononcés dans le Yukon et les Territoires du Nord-Ouest.

22. Divorces and crude rates (continued)

[See note at head of table.]

Lebanon [3, 32]	†C	515	494	558	503	* 682	* 952	* 768	686	532	1 008

Italics: Data are unreliable or of unknown completeness.

* Provisional.

† Data tabulated by year of registration rather than occurrence.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[4] Data include annulments.

[15] For Aruba, Bonaire and Curacao only.

[16] Excluding tribal Indian population, numbering 48 654 in 1950, and also data for Canal Zone shown separately above.

[17] Excludes divorces of non-residents.

[18] Data are estimates based on divorces and annulments reported by a varying number of States.

[19] Data include annulments, and divorces among non-permanent residents.

[20] There is no legal provision for "divorce" in sense used here.

[21] Excluding Indian and Negro population living in tribes, estimated at 26 000 in 1950-1956 and 38 000 in 1959. Beginning 1952, data are civil divorces only, excluding dissolutions in accordance with Hindu and Moslem law which numbered 358 and 60, respectively, in 1951.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

† Données exploitées selon l'année de l'enregistrement et non l'année de l'événement.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le Chapitre II.

[4] Y compris les annulations.

[15] Les données ne concernent qu'Aruba, Bonaire et Curaçao.

[16] Non compris les Indiens vivant en tribus, au nombre de 48 654 en 1950; à l'exclusion aussi de la Zone du Canal qui fait l'objet d'une rubrique distincte (voir plus haut).

[17] Non compris les divorces de non-résidants.

[18] Les données résultent d'estimations établies d'après des chiffres (divorces et annulations) communiques par un nombre variable d'Etats.

[19] Y compris annulations, et divorces parmi les résidents non permanents.

[20] La loi ne prévoit pas le "divorce" au sens où on l'entend ici.

[21] Non compris les Indiens et les noirs vivant en tribus : 26 000 personnes en 1950-1956 et 38 000 en 1959 (estimations). A partir de 1952, divorces prononcés par les tribunaux, non compris les unions dissoutes selon la coutume hindoue ou musulmane, dont le nombre s'établissait respectivement à 358 et 60 en 1951.

22. Divorces, nombre et taux bruts (suite)

[Voir note au début du tableau.]

[22] Excluding Indian jungle population, numbering 56 705 in 1950.
[23] Excluding armed forces and foreigners.
[24] Data include divorces in Netherlands New Guinea.
[25] Data are for Iranian nationals only. Prior to 1952, data are for years ended 20 March. Beginning 1952, data are for years ended 21 December.
[26] Prior to 1958, excluding Bedouin population in the Negev.
[27] For Jewish population only.
[28] Data are for Japanese nationals in Japan only. Prior to May 1952, excluding Tokara Archipelago, and prior to 1954, Amami Islands, both acquired from the Ryukyu Islands on 5 December 1951 and 25 December 1953, respectively.
[29] Data are for Jordanian nationals only.
[30] For East Jordan only.
[31] Data are for Korean nationals only.
[32] Data are for Lebanese nationals only, i.e., excluding registered Palestinian refugees, numbering 131 732 on 30 June 1959. For refugees excluded each year 1950-1958, see Table 4.

[22] Non compris les Indiens de la jungle, au nombre de 56 705 en 1950.
[23] Non compris les militaires et les étrangers.
[24] Y compris les divorces dans la population de la Nouvelle-Guinée néerlandaise.
[25] Ne concernent que les nationaux iraniens. Pour les années antérieures à 1952, les données se rapportent à des périodes annuelles se terminant le 20 mars. A partir de 1952, les données se rapportent à des périodes annuelles se terminant le 21 décembre.
[26] Pour les années antérieures à 1958, non compris les Bédouins du Négeb.
[27] Ne concerne que la population juive.
[28] Ne concerne que les nationaux japonais se trouvant au Japon. Pour la période antérieure à mai 1952, non compris l'archipel des Tokara et, pour les années antérieures à 1954, non compris les îles Amami, détachés des îles Ryû-Kyû et rattachés au Japon les 5 décembre 1951 et 25 décembre 1953, respectivement.
[29] Ne concernent que les nationaux jordaniens.
[30] Ne concerne que la partie orientale de la Jordanie.
[31] Ne concerne que les nationaux coréens.
[32] Ne concerne que les nationaux libanais; il n'est pas tenu compte des réfugiés de Palestine immatriculés au nombre de 131 732 au 30 juin 1959. Pour le nombre de réfugiés omis chaque année de 1950 à 1958, voir le Tableau 4.

Italics: Data are unreliable or of unknown completeness.

* Provisional.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[4] Data include annulments.

[20] There is no legal provision for "divorce" in sense used here.

[33] Excluding Allied military and civilian personnel and their dependants stationed in the area.

[34] Prior to 1955, data are by year of registration rather than by year of occurrence.

[35] Data are petitions for divorce and annulment entered in courts.

[36] Data exclude divorces of aliens temporarily in the area.

[37] Data include divorces among armed forces stationed outside country and among alien armed forces in the area.

[38] Data include divorces of Bulgarian nationals outside country, but exclude those of aliens in the area.

[39] Computed on population excluding dependencies of Guernsey.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le Chapitre II.

[4] Y compris les annulations.

[20] La loi ne prévoit pas le "divorce" au sens où on l'entend ici.

[33] Non compris les militaires et agents civils alliés en poste sur le territoire ni les membres de leur famille les accompagnant.

[34] Pour les années antérieures à 1955, les statistiques sont établies selon l'année de l'enregistrement et non l'année de l'événement.

[35] D'après les instances en divorce ou annulation devant les tribunaux.

[36] Non compris les divorces d'étrangers se trouvant temporairement sur le territoire.

[37] Y compris les divorces de militaires nationaux hors du pays et les divorces de militaires étrangers en garnison sur le territoire.

[38] Y compris les divorces de nationaux bulgares hors du pays mais non compris les divorces d'étrangers sur le territoire.

[39] Taux calculé sur la base d'un chiffre de population qui ne comprend pas les dépendances de Guernesey.

22. Divorces, nombre et taux bruts (suite)

[Voir note au début du tableau.]

[40] Excluding Faeroe Islands and Greenland.
[41] For 1950, data are for Finnish nationals in Finland only, rate computed on population which includes resident aliens; beginning 1951, including also data for nationals temporarily outside country.
[42] Rates computed on population excluding alien armed forces stationed in the area and members of career military service outside country unless on duty in Germany or Austria.
[43] Includes data for East Berlin.
[44] Prior to 1956, data include annulments.
[45] Data include divorces granted outside country if registered in a Netherlands population Register.
[46] Rates computed on population including armed forces outside country and merchant seamen at sea, but excluding Commonwealth and alien armed forces stationed in the area.
[47] Prior to 1953, data are petitions for divorce entered in courts.
[48] Excluding full-blooded aborigines, estimated at 39 319 in June 1954.

[40] Non compris les îles Féroé et le Groenland.
[41] Pour 1950, les données ne concernent que les ressortissants finlandais se trouvant en Finlande, mais taux calculé sur la base d'un chiffre de population comprenant les résidents étrangers; à partir de 1951: y compris les ressortissants finlandais se trouvant temporairement hors de Finlande.
[42] Taux calculés sur la base d'un chiffre de population qui ne comprend pas les militaires étrangers en garnison sur le territoire et les militaires français de carrière en garnison hors du pays, à l'exception de ceux qui font partie des forces d'occupation en Allemagne et en Autriche.
[43] Y compris Berlin-Est.
[44] Pour les années antérieures à 1956, y compris les annulations.
[45] Y compris les divorces prononcés à l'étranger, à condition qu'ils aient été inscrits sur un registre de population néerlandais.
[46] Taux calculés sur la base d'un chiffre de population qui comprend les militaires nationaux hors du pays et les équipages de la marine marchande en mer mais ne comprend pas les militaires du Commonwealth et les militaires étrangers en garnison sur le territoire.
[47] Pour les années antérieures à 1953, instances en divorce devant les tribunaux.
[48] Non compris les aborigènes purs, au nombre de 39 319 en juin 1954.

22. Divorces and crude rates (continued)

Italics: Data are unreliable or of unknown completeness.

* Provisional.

[1] Data said to be relatively complete are coded "C"; those said to be unreliable (incomplete) are coded "U". For further details, see Chapter II.

[49] Prior to 1959, data are for years ended 31 March and rates are computed on population as of 30 September.

[50] Data are petitions for divorce, annulment or separation entered in courts.

Italique: Données discutables ou dont le degré de complétude n'est pas connu.

* Données provisoires.

[1] La lettre "C" désigne les données relativement complètes et la lettre "U" les données discutables (incomplètes). Pour plus de détails, voir le Chapitre II.

[49] Pour les années antérieures à 1959, les données se rapportent à des périodes annuelles se terminant le 31 mars, mais les taux sont calculés sur la base de la population au 30 septembre.

[50] D'après les instances en divorce, annulation ou séparation devant les tribunaux.

22. Divorces, nombre et taux bruts (suite)

[Voir note au début du tableau.]

[51] Including data for Condominium of Canton and Enderbury Islands.
[52] Computed on population excluding United States military, their dependants and contract employees.
[53] Beginning 1953, data are for Tongan population only.
[54] For year ended 31 March.
[55] For Samoan population only.
[56] Not computed by the Statistical Office of the United Nations.

[51] Y compris les divorces dans la population du Condominium des îles Canton et Enderbury.
[52] Calculés sur la base d'un chiffre de population qui ne comprend pas les militaires des Etats-Unis et les membres de leur famille ni les agents contractuels des Etats-Unis.
[53] A partir de 1953, les données ne concernent que les Tongans.
[54] Période annuelle se terminant le 31 mars.
[55] Ne concerne que les Samoans.
[56] Les chiffres n'ont pas été calculés par le Bureau de statistique de l'ONU.

23. Expectation of life at specified ages for each sex : latest available data

[1] Formerly Belgian Congo; declared independent 30 June 1960.
[2] Values derived from results of a sample survey of mortality among about 3.6 per cent of indigenous population, except for age 70, which is estimated.
[3] Values derived from results of 1955 demographic sample survey of mortality among residents but rates computed on total population, including non-residents.
[4] For age 25 years.
[5] For age 35 years.
[6] For age 45 years.
[7] For age 55 years.
[8] Formerly part of French West Africa. At end of 1958, became internally autonomous republic within French Community and declared independent on 7 August 1960.

[1] Anciennement Congo belge; proclamé indépendant le 30 juin 1960.
[2] Valeurs calculées à partir des résultats d'une enquête par sondage sur la mortalité dans un échantillon de 3,6 pour cent environ de la population indigène, sauf que pour "70 ans" il s'agit d'une estimation.
[3] Valeurs calculées à partir des résultats de l'enquête par sondage de 1955 sur la mortalité parmi les résidants; toutefois, les quotients de mortalité ont pour base la population totale (y compris les non-résidants).
[4] 25 ans.
[5] 35 ans.
[6] 45 ans.
[7] 55 ans.
[8] Ce pays, qui faisait partie de l'ancienne Afrique-Occidentale française, est devenu en 1958 une république à autonomie interne dans le cadre de la Communauté française et a été proclamé indépendant le 7 août 1960.

23. Espérance de vie à différents âges pour chaque sexe : dernières données disponibles

[Nombre moyen d'années qui restent a vivre aux personnes atteignant l'âge donné si elles sont soumises aux conditions de mortalité de la période indiquée. Voir explications a la page 96.]

[9] Values derived from results of demographic sample survey of mortality in 69 villages between October 1957 and April 1958.

[10] Value derived from results of 1953-1955 demographic sample survey of indigenous African population.

[11] Values for ages 1 and 2 derived from mortality rates computed on population assumed to have same age distribution as Jamaica, 1946.

[12] Similarity in mortality, and advantages of greater stability in larger numbers, led to decision to compile life table on combined experience.

[9] Valeurs calculées à partir des résultats d'une enquête par sondage sur la mortalité effectuée dans 69 villages entre octobre 1957 et avril 1958.

[10] Valeur calculée à partir des résultats d'une enquête par sondage sur la mortalité parmi la population africaine indigène, effectuée en 1953-1955.

[11] Les valeurs pour 1 an et 2 ans ont été calculées à partir de quotients de mortalité pour une population qui est censée avoir la même structure par âge que celle de la Jamaïque en 1946.

[12] La mortalité étant comparable dans les deux îles et les grands nombres offrant l'avantage d'une plus grande stabilité, on a décidé de dresser la table de mortalité pour l'ensemble des deux îles.

[5] For age 35 years.
[6] For age 45 years.
[7] For age 55 years.
[12] Similarity in mortality, and advantages of greater stability in larger numbers, led to decision to compile life table on combined experience.
[13] "Indigenous" comprises Indian population, which is preponderantly of Mayan descent; "non-indigenous" are persons reported as *ladinos*, i.e., persons classified as other than Indian according to socio-economic criteria.
[14] Values derived from mortality rates implied from apparent survivorship rates between census of 1950 and an estimate for 1951 which was constructed on an assumed rate of growth.
[15] Excluding tribal Indians, numbering 48 654 in 1950; also excluding Canal Zone.
[16] Unofficial data compiled by Puerto Rico Bureau of Demographic Registry and Statistics.
[17] For 75 years.

[5] 35 ans.
[6] 45 ans.
[7] 55 ans.
[12] La mortalité étant comparable dans les deux îles et les grands nombres offrent l'avantage d'une plus grande stabilité, on a décidé de dresser la table de mortalité pour l'ensemble des deux îles.
[13] La population indigène est constituée par la population indienne, où prédominent les personnes d'origine maya. La population non indigène se compose de toutes les personnes classées comme *ladinos*, c'est-à-dire distinctes des Indiens selon divers critères socio-économiques.
[14] Valeurs calculées à partir de quotients de mortalité découlant des taux de survie apparents pour la population recensée en 1950 et la population de 1951 estimée par l'application d'un taux d'accroissement théorique.
[15] Non compris les Indiens vivant en tribus, au nombre de 48 654 en 1950; à l'exclusion aussi de la Zone du Canal.
[16] Données non officielles établies par le *Puerto Rico Bureau of Demographic Registry and Statistics*.
[17] 75 ans.

23. Espérance de vie (suite)

[Voir note au début du tableau.]

[18] Excluding data for Alaska and Hawaii.
[19] Values for ages under 5 derived from mortality rates estimated on the basis of data for Trinidad and Tobago.
[20] Comprising the Colonies of Antigua, Montserrat, St. Kitts-Nevis and Anguilla, and the Virgin Islands [UK], the last of which is not part of the West Indies federation.
[21] Values are for population born in Brazil and are derived from mortality rates implied from apparent survivorship rates between censuses.
[22] Excluding Amerindians, numbering 16 322 at 1946 census.

[18] Non compris l'Alaska et Hawaï.
[19] Les valeurs pour moins de 5 ans ont été calculées à partir de quotients de mortalité établis par estimation sur la base de données pour la Trinité et Tobago.
[20] Ensemble des colonies suivantes : Antigua, Montserrat, Saint-Christophe-Nevis, Anguilla et îles Vierges (R-U), ces dernières îles ne faisant pas partie de la Fédération des Antilles.
[21] Les données se rapportent à la population née au Brésil et sont calculées à partir de quotients de mortalité découlant des taux de survie apparents d'un recensement à l'autre.
[22] Non compris les Amérindiens, soit 16 322 personnes au recensement de 1946.

[24] Data are for States of Uttar Pradesh, Bihar, Orissa, Assam, Manipur, Madras, Mysore, Travancore-Cochin, Coorg, Bombay, Saurashtra, Kutch, Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal and Vinhya Pradesh, comprising a population of 294 749 000 in 1951. Values derived from mortality rates implied from apparent survivorship rates between censuses, except that values for ages under 5 and for 60 years and over are estimated.

[25] Data are for Japanese nationals in Japan only.

[26] Data are for the Republic of Korea and North Korea combined.

[27] Excluding Southern Dobruja.

[28] Excluding Greenland shown separately above, and Faeroe Islands.

[29] Excluding data for Dodecanese Islands, ceded to Greece by Italy in 1947.

[24] Les données se rapportent aux Etats suivants : Uttar Pradesh, Bihar, Orissa, Assam, Manipur, Madras, Mysore, Travancore-Cochin, Coorg, Bombay, Saurashtra, Kutch, Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal et Vinhya Pradesh dont la population totale était de 294 749 000 personnes en 1951. Valeurs calculées à partir de quotients de mortalité découlant des taux de survie apparents d'un recensement à l'autre, sauf que pour "moins de 5 ans" et "60 ans et plus" il s'agit d'estimations.

[25] Ne concerne que les nationaux japonais se trouvant au Japon.

[26] Données concernant l'ensemble formé par la Corée du Nord et la République de Corée.

[27] Non compris la Dobroudja méridionale.

[28] Non compris le Groenland qui fait l'objet d'une rubrique distincte (voir plus haut) ni les îles Féroé.

[29] Non compris le Dodécanèse, cédé par l'Italie à la Grèce en 1947.

UNITED NATIONS NATIONS UNIES

STATISTICAL YEARBOOK 1960

Twelfth issue of a comprehensive collection of international statistics presented in 187 tables, generally covering the year 1948 and some nine most recent years. The *Yearbook* contains, *inter alia*, statistics relating to: population; structure of mining, manufacturing, construction and electricity and gas industries; production of commodities in agriculture, mining and manufacturing; textile and transport equipment; production, trade and consumption of energy; postal, telegraph and telephone services; civil aviation; external trade of virtually all trading countries; balance of payments; international economic aid; wholesale prices; national income; budget accounts and public debt; housing, medical personnel; educational institutions; newsprint and newspapers; books, films, cinemas and radio and television broadcasting.

The tables are grouped under the following chapter headings:

- Population
- Manpower
- Production summary
- Agriculture
- Forestry
- Fishing
- Mining, quarrying
- Manufacturing
- Construction
- Energy
- Consumption
- Transport
- Communication
- Internal Trade
- External Trade
- Balance of payments
- International economic aid
- Wages and prices
- National income
- Finance
- Public Finance
- Housing Statistics
- Social Statistics
- Education, culture

The *Yearbook* includes also appendices showing conversion factors and alphabetical subject and country indexes.

Prepared by the Statistical Office of the United Nations
(U.N. publication, Sales No.: 61.XVII.1)
9 x 11½ in., 642 pages. Clothbound, $10.00; 71/- stg.; 43 Sw. fr.
Paperbound, $8.00; 57/- stg.; 34.50 Sw. fr.
(See list of distributors at end of volume)

ANNUAIRE STATISTIQUE 1960

Douzième édition d'un vaste recueil de statistiques internationales comportant 187 tableaux et se rapportant généralement à l'année 1948 et aux neuf dernières années. L'*Annuaire* contient natamment des séries sur les sujets suivants: population; structure des industries extractives et manufacturières, de la construction et des industries du gaz et de l'électricité; production de l'agriculture, des industries extractives et des industries manufacturières; équipement de l'industries textile et des transports; énergie: production, commerce et consommation; services postaux, télégraphiques et téléphoniques; aviation civile; commerce extérieur de presque tous les pays participant à ce commerce; balance des paiements; aide économique internationale; prix de gros; revenu national; comptes budgétaires et dette publique; habitation; personnel médical; établissements d'enseignement; papier journal et journaux; livres, films, cinémas, radiodiffusion et télévision.

Ces tableaux sont groupés sous les titres suivants:

- Population
- Main-d'œuvre
- Résumé de la production
- Agriculture
- Forêts
- Pêche
- Industries extractives
- Industries manufacturières
- Construction
- Energie
- Consommation
- Transports
- Communications
- Commerce intérieur
- Commerce extérieur
- Balance des paiements
- Aide économique internationale
- Salaires et prix
- Revenu national
- Finances
- Finances publiques
- Statistiques de l'habitation
- Statistiques sociales
- Instruction, culture

L'*Annuaire* contient en annexe une table de conversion, un index alphabétique par sujets et un par pays.

Préparé par le Bureau de statistique de l'Organisation des Nations Unies

23 x 29 cm, 642 pages. Relié toile: $10,00; 71/- stg.; 43 fr. suisses
Broché: $8,00; 57/- stg.; 34,50 fr. suisses
(Voir liste des dépositaires à la fin du volume)

PUBLICATIONS OF THE WORLD HEALTH ORGANIZATION

ANNUAL EPIDEMIOLOGICAL AND VITAL STATISTICS, 1958

This Annual, published by the World Health Organization, is the eleventh of the series. It will appear in the middle of 1961 and will contain about 730 pages of statistical data relating to the year 1958, in three Parts, as follows:

I. General demography and causes of death. Brief information on populations (censuses and estimates), natality, general mortality and infant mortality in the various countries. A series of tables, by country, gives absolute figures for deaths, by sex and age groups according to the abridged international list of causes. More detailed tables are, in addition, devoted to important causes of death such as tuberculosis, cancer, cardiovascular diseases, and accidents, and to maternal and infant mortality.

II. Communicable diseases. Revised statistics of cases and deaths notified during the year, including their seasonal fluctuations. With respect to some diseases, the notified cases are given by sex and age group.

III. Medical personnel and hospital establishments. This part gives information concerning number of physicians, dentists, nurses, etc., number, type and capacity of hospitals.

Data on hospital in-patients will be published for the first time, covering the period 1955-1958, because of the increasing demand for information on morbidity.

This volume contains a mass of valuable information on the health of the populations of many countries and territories in so far as it is available and sufficiently reliable to justify publication.

Prepared by the Division of Health Statistics

OF THE WORLD HEALTH ORGANIZATION, GENEVA

PUBLICATIONS DE L'ORGANISATION MONDIALE DE LA SANTE

STATISTIQUES EPIDEMIOLOGIQUES ET DEMOGRAPHIQUES ANNUELLES, 1958

Cet annuaire, le onzième de la série, sera publié par l'Organisation mondiale de la Santé vers le milieu de l'année 1961. Il comportera environ 730 pages d'informations statistiques relatives á l'année 1958, réparties en trois parties:

I. Démographie générale et causes de décès. Informations succinctes sur la population des pays (recensements et estimations), sur la natalité, la mortalité générale et la mortalité infantile. Dans une première série de tableaux par pays, on trouvera les nombres de décès imputables aux différentes causes (d'après la liste abrégée de la nomenclature internationale), répartis selon le sexe et l'âge. D'autres tableaux plus détaillés sont consacrés à certaines causes importantes: tuberculose, cancer, maladies cardio-vasculaires et accidents, ainsi qu'à la mortalité maternelle et à la mortalité infantile.

II. Maladies contagieuses. Statistique révisée des cas et des décès notifiés au cours de l'année, faisant apparaître notamment les fluctuations saisonnières. Pour certaines maladies, les cas notifiés sont répartis selon le sexe et l'âge.

III. Personnel médical et établissements hospitaliers. Cette partie de l'annuaire fournit une documentation sur le nombre des médecins, dentistes, infirmières, etc., ainsi que sur le nombre des hôpitaux, leur type et leur contenance en lits.

Des données sur la statistique des malades hospitalisés seront publiées, pour la première fois, couvrant la période 1955-1958, ceci en vue de répondre à la demande croissante de renseignements sur la morbidité des populations.

Ce volume renferme quantité de renseignements utiles sur l'état sanitaire des populations de nombreux pays et territoires; on s'est efforcé d'en réunir le plus possible et l'on a retenu tous ceux qui paraissaient suffisamment dignes de foi pour être publiés.
